  - Evolutionary theory has been tested and proven to be true, while Scientific Creationism has not been proven and does not explain things well
- Many people think that the two theories (evolution and creationism) are equal in importance, but this is not true. This misunderstanding is caused by the fact that many high school students in the US do not get a good science education, which means they don't understand the basics of evolution (as explained in Chapter 1 of *Abusing Science*). It is not only the teachers who are to blame for this, but many people
  - Scientific Creationists continue to argue for their beliefs, even though the theory they support has been shown to be wrong. It is not unusual for people to keep believing something even when it has been proven wrong, but why this happens depends on the individual situation. Here, some brief ideas are offered about why this might be:
    - People have a natural tendency to use design explanations (PDEs) too much. Paul Bloom from Yale University and Thomas Reid from the 18th century both suggested this idea
    - People often make wrong decisions because they don't understand the chances of something happening. This has been studied a lot by psychologists, and even smart people can be bad at understanding the

such as climate change sustainable food supply and fresh water and emerging public health issues While canned laboratories  
and cook book approaches to college science education do teach students to operate equipment make accurate  
measurements and work well with numbers they do not teach students how to take a scientific approach to an area of

interpretation which are essential to scientific research Discovery Based Learning in the Life Sciences presents a different  
way of organizing and developing biology teaching laboratories to promote both deep learning and understanding of core

concepts while still teaching the creative process of science In eight chapters the text guides undergraduate instructors in creating their own discovery based experiments The first chapter introduces the text delving into the necessity of science education reform The chapters that follow address pedagogical goals and desired outcomes incorporating discovery based laboratory experiences realistic constraints on such lab experiments model scenarios and alternate ways to enhance student understanding The book concludes with a reflection on four imperatives in life science research climate food energy and health and how we can use these laboratory experiments to address them Discovery Based Learning in the Life Sciences is an invaluable guide for undergraduate instructors in the life sciences aiming to revamp their curriculum inspire their students and prepare them for careers as educated global citizens
