Grigsby,2017-09-29 For as long as statistics record housing conditions in the United States have been improving Housing that only the rich once enjoyed is commonplace today by today s standards most of the population was ill housed at the turn of the century Amidst this rise however inadequate living accommodations for a portion of the population have stubbornly persisted Many families endure housing deprivations that are severe even with respect to the norms of earlier years Development of housing policy requires a blending of technical data theory and political and ethical considerations This study is organized therefore around a planning framework Housing needs and

objectives are specified housing resources are identified theories of the problem are explored alternative strategies are reviewed and one of several possible packages of programs is elaborated in detail Particular emphasis is placed throughout on the multiplicity of housing and non housing goals and programs and on the variety of client groups which must be taken into consideration in trying to evolve an appropriate role for the public sector in this area of social concern Specifically this work begins with a quick sketch of Baltimore and an examination of local problems and policies This is followed by a description of the dimensions of housing needs Another chapter studies the low income market empirically from the perspective of the person whom poor families rely on for housing services the landlord An investigation on several theories of slums decay and housing abandonment is discussed and the authors formulate a composite theory that serves as a foundation for policy decisions The final set of chapters explores in greater detail technical aspects of the proposals contained in the text and the concluding chapter investigates their political feasibility

Urban Housing Markets Jerome Rothenberg, 1991-11-15 This powerful new theoretical approach to analyzing urban housing problems and the policies designed to rectify them will be a vital resource for urban planners developers policymakers and economists The search for the roots of serious urban housing problems such as homelessness abandonment rent burdens slums and gentrification has traditionally focused on the poorest sector of the housing market The findings set forth in this volume show that the roots of such problems lie in the relationships among different parts of the market not solely within the lower quality portion though that is where problems are most dramatically manifested and housing reforms are myopically focused The authors propose a new understanding of the market structure characterized by a closely interrelated array of quality submarkets Their comprehensive models ground a unified theory that accounts for demand by both renters and owner occupants supply by owners of existing dwellings changes in the stock of housing due to conversions and new construction and interactions across submarkets *Tax Reform, 1969, Hearings* United States.
