**The Handbook of Geographic Information Science** John P. Wilson, A. Stewart Fotheringham, 2008-04-15 This Handbook is an essential reference and a guide to the rapidly expanding field of Geographic Information Science Designed for students and researchers who want an in depth treatment of the subject including background information Comprises around 40 substantial essays each written by a recognized expert in a particular area Covers the full spectrum of research in GIS Surveys the increasing number of applications of GIS Predicts how GIS is likely to evolve in the near future Human Rights and Ocean Governance Mara Ntona, 2023-12-12 This book

argues for the utility of human rights in the practice of ocean governance Maritime spatial planning MSP has become the dominant marine management paradigm with MSP frameworks already at various stages of elaboration and implementation in more than half of all coastal states However as experience with MSP accrues a central systemic shortcoming has become apparent insofar as the normative frameworks that underpin MSP tend to be grounded in a rationalistic and economistic worldview The result is a post political neoliberal approach to the implementation of MSP which favours technocratic fixes to complex societal problems over efforts to address underlying issues of power and inequality Building upon the new field of critical MSP studies this book offers a much neglected legal contribution More specifically it analyses the extent to which law and particularly human rights law can be utilised to meaningfully challenge the unjust patterns of human ocean interaction that MSP preserves or creates and so provide a vehicle for the formulation and realisation of transformative blue futures The book looks to human rights as norms that are uniquely capable of bringing into relief the values cause and effect

relationships and uncertainties that prevailing capitalist industrial framings of the ocean tend to downplay or worse disregard And so from a more pragmatic viewpoint the book argues that the policy and advocacy tools associated with human rights can be used within MSP processes to foster patterns of human ocean interaction which are more conducive to social and environmental justice This book will be of interest to legal and planning scholars geographers and others concerned with ocean governance and the blue turn in the social sciences and humanities more generally **Liquid Power** Erik

Swyngedouw, 2015-04-24 An examination of the central role of water politics and engineering in Spain's modernization illustrating water's part in forging maintaining and transforming social power In this book Erik Swyngedouw explores how
