Profit Beyond Measure H. Johnson,Anders Bröms,2011-01-25 Waste has plagued almost every industrial age firm for the past century In this powerfully argued alternative to conventional cost management thinking experts H Thomas Johnson and Anders Bröms assert that any company can avoid the waste that is generated through excessive operating costs in the short run and excessive losses from market instability in the long run To gain more secure levels of profitability management must simply change how it thinks about work and how it organizes work Profit Beyond Measure details how two extremely profitable manufacturers Toyota and the Swedish truck maker Scania have rejected the traditional mechanistic mindset of managing by results that generates waste Johnson and Bröms explain how Toyota and Scania achieve their legendary cost advantage through a revolutionary concept they call managing by means MBM Instead of being driven to meet preconceived accounting targets the production systems of Toyota and Scania are governed by the three precepts that guide all living systems self organization interdependence and diversity Amid a wealth of new insights into Toyota's vaunted system Johnson and Bröms introduce the tools of MBM to show how design production and profitability analysis are done to customer order They demonstrate that by following the principles that emulate life systems even a lean and profitable company can organize work to greatly lessen its long term earnings instability and sharply reduce its short run operating costs Scania has achieved sixty five years of financial stability and longevity in the face of fierce competition Toyota has amassed a market value since 1988 that has rivaled or sometimes surpassed the American Big Three automakers combined The principles that Johnson and Bröms set forth in Profit Beyond Measure can guarantee the same richer longer life to any company that applies them

Critical Metals, Sourcing, and Long Supply Chains Jody E. Muelaner,2022-10-17 To achieve decarbonization through means such as energy efficient vehicles active travel and electrified road freight solutions must reduce upstream demands on supply chains However even taking such a path the energy transition will massively increase demand for raw materials such as cobalt nickel platinum group metals and rare earth elements Many of the metals can be largely substituted if required so they are not truly critical to decarbonization Critical Metals Sourcing and Long Supply Chains Constraints on Transport Decarbonization discusses how lithium silver and copper are much more difficult to replace and the energy transition is highly likely to depend on them Greatly increased and more geographically dispersed investments in mineral extraction are vital Governments must support this by giving investors clear signals about the rate of the transition geological survey data accelerated permits and government backed finance Public support for sustainable mining should be gained by raising awareness that mineral extraction is critical to combating climate change Click here to access the full SAE EDGETM Research Report portfolio <https://doi.org/10.4271/EPR2022SE2>
