Photonic Band Gaps and Localization C.M. Soukoulis, 2013-11-27 This volume contains the papers presented at the NATO Advanced Research Workshop on Localization and Propagation of Classical Waves in Random and Periodic Media held in Aghia Pelaghia Heraklion Crete May 26 30 1992 The workshop's goal was to bring together theorists and experimentalists from two related areas localization and photonic band gaps to highlight their common interests The objectives of the workshop were i to assess the state of the art in

experimental and theoretical studies of structures exhibiting classical wave band gaps and or localization ii to discuss how such structures can be fabricated to improve technologies in different areas of physics and engineering and iii to identify problems and set goals for further research Studies of the propagation of electromagnetic EM waves in periodic and or disordered dielectric structures photonic band gap structures have been and continue to be a dynamic area of research Anderson localization of EM waves in disordered dielectric structures is of fundamental interest where the strong ei ei interaction effects entering the electron localization are absent

Light Scattering and Nanoscale Surface Roughness
 Alexei A. Maradudin, 2010-05-10 All real surfaces both those occurring naturally and those fabricated artificially and with great care are rough to some degree It is therefore of interest and often of importance to know the extent to which this roughness affects physical processes occurring at a surface A particularly interesting class of physical processes occurring at a rough surface is the scattering of electromagnetic waves from it or their transmission through it In this case the degree of the surface roughness is referred to the wavelength of the waves incident on it The study of the scattering of electromagnetic waves from rough surfaces has been actively carried out for more than a century now since Rayleigh's investigations of the scattering of a monochromatic plane wave incident normally on a 1 sinusoidal interface between two different media The first theoretical treatment of the scattering of an electromagnetic wave from a randomly rough surface was due to Mandel'shtam in the context of the scattering of light from a liquid's face In these pioneering studies the angular dependence of the intensity of the scattered field was calculated by perturbation theory as an expansion in powers of the surface profile function though the first nonzero term a single scattering approximation
