Schilds Ladder:

Schild's Ladder Greg Egan,2002-02-21 For twenty thousand years every observable phenomenon in the universe has been successfully explained by the Sarumpaet Rules the laws governing the dynamics of the quantum graphs that underlie all the constituents of matter and the geometric structure of spacetime Now Cass has stumbled on a set of quantum graphs that might comprise the fundamental particles of an entirely different kind of physics and she has travelled three hundred and seventy light years to Mimosa Station a remote experimental facility in the hope of bringing this tantalising alternative to life The novo vacuum is predicted to begin decaying the instant it s created but even a short lived microscopic speck could shed light on the origins of the universe and test the Sarumpaet Rules more rigorously than ever before Cass s experiment turns out to be more successful than anticipated the novo vacuum is more stable than the ordinary vacuum around it and a region in which the new physics holds sway proceeds to expand out from Mimosa at half the speed of light Six hundred years later more than two thousand inhabited systems have been lost to the novo vacuum On the Rindler a ship that has matched velocities with the encroaching border people have come from throughout inhabited space to study the phenomenon Most are Preservationists hunting for a way to turn back the tide but a few belong to another faction Yielders who believe that the challenge of adapting to survive on the far side of the border would reinvigorate a civilisation that has grown stale and insular Tchicaya has come to the Rindler to join the Yielders but when Mariama a childhood friend whose example inspired him to abandon his own home world and traditions for a life of travel arrives soon after he is shocked to discover that she plans to help the Preservationists find a way to destroy the novo vacuum As a theoretical breakthrough leads to a sequence of experiments that begins to reveal the true richness of the world behind the border tensions between the opposing factions grow When a splinter group responds to these revelations with violent unilateral action Tchicaya and Mariama are forced into an uneasy alliance and travel together through the border balancing old and new loyalties against the fate of two incomparably different universes   **Schild's Ladder** Greg Egan,2002 In the deep future mankind is barely distinguishable from machine intelligences rarely embodied outside of virtual environments It is time using the very building blocks of time and space to engineer the universe itself Time to enter a new quantum realm of marvels and terrors The new novel from one of the worlds most respected and acclaimed writers marks a dramatic move into a new arena that of the wide screen SF epic ala Baxter Banks Hamilton and Macleod Novels such as this have proved to be the engine house for both the major sales and the best ideas of modern SF That the genre s primary ideas man and one of its finest prose stylists should direct his energies to this sort of canvas promises much This will be Greg Egan s breakout book   *Geometric Science of Information* Frank Nielsen,Frédéric Barbaresco,2013-08-19 This book constitutes the refereed proceedings of the First International Conference on Geometric Science of Information GSI 2013 held in Paris France in August 2013 The nearly 100 papers presented were carefully reviewed and selected from numerous submissions and are organized into the following thematic sessions

Geometric Statistics on Manifolds and Lie Groups Deformations in Shape Spaces Differential Geometry in Signal Processing Relational Metric Discrete Metric Spaces Computational Information Geometry Hessian Information Geometry I and II Computational Aspects of Information Geometry in Statistics Optimization on Matrix Manifolds Optimal Transport Theory Probability on Manifolds Divergence Geometry and Ancillarity Entropic Geometry Tensor Valued Mathematical Morphology Machine Manifold Topology Learning Geometry of Audio Processing Geometry of Inverse Problems Algebraic Infinite dimensional Banach Information Manifolds Information Geometry Manifolds and Algorithms on Manifolds   Geometry and Statistics ,2022-07-15 Geometry and Statistics Volume 46 in the Handbook of Statistics series highlights new advances in the field with this new volume presenting interesting chapters written by an international board of authors Provides the authority and expertise of leading contributors from an international board of authors Presents the latest release in the Handbook of Statistics series Updated release includes the latest information on Geometry and Statistics   Visual Differential Geometry and Forms Tristan Needham,2021-07-13 An inviting intuitive and visual exploration of differential geometry and forms Visual Differential Geometry and Forms fulfills two principal goals In the first four acts Tristan Needham puts the geometry back into differential geometry Using 235 hand drawn diagrams Needham deploys Newton s geometrical methods to provide geometrical explanations of the classical results In the fifth act he offers the first undergraduate introduction to differential forms that treats advanced topics in an intuitive and geometrical manner Unique features of the first four acts include four distinct geometrical proofs of the fundamentally important Global Gauss Bonnet theorem providing a stunning link between local geometry and global topology a simple geometrical proof of Gauss s famous Theorema Egregium a complete geometrical treatment of the Riemann curvature tensor of an n manifold and a detailed geometrical treatment of Einstein s field equation describing gravity as curved spacetime General Relativity together with its implications for gravitational waves black holes and cosmology The final act elucidates such topics as the unification of all the integral theorems of vector calculus the elegant reformulation of Maxwell s equations of electromagnetism in terms of 2 forms de Rham cohomology differential geometry via Cartan s method of moving frames and the calculation of the Riemann tensor using curvature 2 forms Six of the seven chapters of Act V can be read completely independently from the rest of the book Requiring only basic calculus and geometry Visual Differential Geometry and Forms provocatively rethinks the way this important area of mathematics should be considered and taught   **Geometric Theory of Information** Frank Nielsen,2014-05-08 This book brings together geometric tools and their applications for Information analysis It collects current and many uses of in the interdisciplinary fields of Information Geometry Manifolds in Advanced Signal Image Video Processing Complex Data Modeling and Analysis Information Ranking and Retrieval Coding Cognitive Systems Optimal Control Statistics on Manifolds Machine Learning Speech sound recognition and natural language treatment which are also substantially relevant for the industry   *Information Processing in Medical Imaging* Gábor Székely,Horst K. Hahn,2011-06-29 This book constitutes the

refereed proceedings of the 22nd International Conference on Information Processing in Medical Imaging IPMI 2011 held at Kloster Irsee Germany in July 2011 The 24 full papers and 39 poster papers included in this volume were carefully reviewed and selected from 224 submissions The papers are organized in topical sections on segmentation statistical methods shape analysis registration diffusion imaging disease progression modeling and computer aided diagnosis The poster sessions deal with segmentation shape analysis statistical methods image reconstruction microscopic image analysis computer aided diagnosis diffusion imaging functional brain analysis registration and other related topics *Greg Egan* Karen Burnham,2014-04-30 Greg Egan 1961 publishes works that challenge readers with rigorous deeply informed scientific speculation He unapologetically delves into mathematics physics and other disciplines in his prose putting him in the vanguard of the hard science fiction renaissance of the 1990s A working physicist and engineer Karen Burnham is uniquely positioned to provide an in depth study of Egan s science heavy oeuvre Her survey of the author s career covers novels like Permutation City and Schild s Ladder and the Hugo Award winning novella Oceanic analyzing how Egan used cutting edge scientific theory to explore ethical questions and the nature of humanity As Burnham shows Egan s collected works constitute a bold artistic statement that narratives of science are equal to those of poetry and drama and that science holds a place in the human condition as exalted as religion or art The volume includes a rare interview with the famously press shy Egan covering his works themes intellectual interests and thought processes Elastic Shape Analysis of Three-Dimensional Objects Ian H. Jermyn,Sebastian Kurtek,Hamid Laga,Anuj Srivastava,2022-05-31 Statistical analysis of shapes of 3D objects is an important problem with a wide range of applications This analysis is difficult for many reasons including the fact that objects differ in both geometry and topology In this manuscript we narrow the problem by focusing on objects with fixed topology say objects that are diffeomorphic to unit spheres and develop tools for analyzing their geometries The main challenges in this problem are to register points across objects and to perform analysis while being invariant to certain shape preserving transformations We develop a comprehensive framework for analyzing shapes of spherical objects i e objects that are embeddings of a unit sphere in including tools for quantifying shape differences optimally deforming shapes into each other summarizing shape samples extracting principal modes of shape variability and modeling shape variability associated with populations An important strength of this framework is that it is elastic it performs alignment registration and comparison in a single unified framework while being invariant to shape preserving transformations The approach is essentially Riemannian in the following sense We specify natural mathematical representations of surfaces of interest and impose Riemannian metrics that are invariant to the actions of the shape preserving transformations In particular they are invariant to reparameterizations of surfaces While these metrics are too complicated to allow broad usage in practical applications we introduce a novel representation termed square root normal fields SRNFs that transform a particular invariant elastic metric into the standard L2 metric As a result one can use standard techniques from functional data analysis

for registering comparing and summarizing shapes Specifically this results in pairwise registration of surfaces computation of geodesic paths encoding optimal deformations computation of Karcher means and covariances under the shape metric tangent Principal Component Analysis PCA and extraction of dominant modes of variability and finally modeling of shape variability using wrapped normal densities These ideas are demonstrated using two case studies the analysis of surfaces denoting human bodies in terms of shape and pose variability and the clustering and classification of the shapes of subcortical brain structures for use in medical diagnosis This book develops these ideas without assuming advanced knowledge in differential geometry and statistics We summarize some basic tools from differential geometry in the appendices and introduce additional concepts and terminology as needed in the individual chapters *New Foundations for Physical Geometry* Tim Maudlin,2014-03-06 Topology is the mathematical study of the most basic geometrical structure of a space Mathematical physics uses topological spaces as the formal means for describing physical space and time This book proposes a completely new mathematical structure for describing geometrical notions such as continuity connectedness boundaries of sets and so on in order to provide a better mathematical tool for understanding space time This is the initial volume in a two volume set the first of which develops the mathematical structure and the second of which applies it to classical and Relativistic physics The book begins with a brief historical review of the development of mathematics as it relates to geometry and an overview of standard topology The new theory the Theory of Linear Structures is presented and compared to standard topology The Theory of Linear Structures replaces the foundational notion of standard topology the open set with the notion of a continuous line Axioms for the Theory of Linear Structures are laid down and definitions of other geometrical notions developed in those terms Various novel geometrical properties such as a space being intrinsically directed are defined using these resources Applications of the theory to discrete spaces where the standard theory of open sets gets little purchase are particularly noted The mathematics is developed up through homotopy theory and compactness along with ways to represent both affine straight line and metrical structure **Science Fiction, Disruption and Tourism** Ian Yeoman,Una McMahon-Beattie,Marianna Sigala,2021-12-20 This book examines science fiction s theoretical and ontological backgrounds and how science fiction applies to the future of tourism It recreates and invents the future of tourism in a creative and disruptive manner reconceptualising tourism through alternative and quantum leap thinking that go beyond the normative or accepted view of tourism The chapters focusing on areas such as disruption sustainability and technology draw readers into the unknown future of tourism a future that may be disruptive dystopian or utopian The book brings a new theoretical paradigm to the study of tourism in a post COVID 19 world and can be used to explore frame and even form the future of tourism It will capture the imagination and inspire readers to address tourism s challenges of tomorrow *Riemannian Geometric Statistics in Medical Image Analysis* Xavier Pennec,Stefan Sommer,Tom Fletcher,2019-09-02 Over the past 15 years there has been a growing need in the medical image computing community for

principled methods to process nonlinear geometric data Riemannian geometry has emerged as one of the most powerful mathematical and computational frameworks for analyzing such data Riemannian Geometric Statistics in Medical Image Analysis is a complete reference on statistics on Riemannian manifolds and more general nonlinear spaces with applications in medical image analysis It provides an introduction to the core methodology followed by a presentation of state of the art methods Beyond medical image computing the methods described in this book may also apply to other domains such as signal processing computer vision geometric deep learning and other domains where statistics on geometric features appear As such the presented core methodology takes its place in the field of geometric statistics the statistical analysis of data being elements of nonlinear geometric spaces The foundational material and the advanced techniques presented in the later parts of the book can be useful in domains outside medical imaging and present important applications of geometric statistics methodology Content includes The foundations of Riemannian geometric methods for statistics on manifolds with emphasis on concepts rather than on proofs Applications of statistics on manifolds and shape spaces in medical image computing Diffeomorphic deformations and their applications As the methods described apply to domains such as signal processing radar signal processing and brain computer interaction computer vision object and face recognition and other domains where statistics of geometric features appear this book is suitable for researchers and graduate students in medical imaging engineering and computer science A complete reference covering both the foundations and state of the art methods Edited and authored by leading researchers in the field Contains theory examples applications and algorithms Gives an overview of current research challenges and future applications   Spectral and Shape Analysis in Medical Imaging Martin Reuter,Christian Wachinger,Hervé Lombaert,2016-12-10 This book constitutes the refereed post conference proceedings of the First International Workshop on Spectral and Shape Analysis in Medical Imaging SeSAMI 2016 held in conjunction with MICCAI 2016 in Athens Greece in October 2016 The 10 submitted full papers presented in this volume were carefully reviewed The papers reflect the following topics spectral methods longitudinal methods and shape methods   **Arrows of Time** Greg Egan,2014-07-21 In an alien universe where space and time play by different rules interstellar voyages last longer for the travellers than for those they left behind After six generations in flight the inhabitants of the mountain sized spacecraft the Peerless have used their borrowed time to develop advanced technology that could save their home world from annihilation But not every traveller feels allegiance to a world they have never seen and as tensions mount over the risks of turning the ship around and starting the long voyage home a new complication arises the prospect of constructing a messaging system that will give the Peerless news of its own future While some of the crew welcome the opportunity to be warned of impending dangers and perhaps even hear reports of the ship s triumphant return others are convinced that knowing what lies ahead will be oppressive and that the system will be abused Agata longs for a chance to hear a message from the ancestors back on the home world proving that the sacrifices of the travellers have not been in vain but her most

outspoken rival Ramiro fears that the system will undermine every decision the travellers make When a vote fails to settle the matter and dissent erupts into violence Ramiro Agata and their allies must seek a new way to bring peace to the Peerless by traveling to a world where time runs in reverse The Arrows of Time is the final volume of the Orthogonal trilogy bringing a powerful and surprising conclusion to the epic story of the Peerless that began with The Clockwork Rocket and The Eternal Flame **Gravitation** Charles W. Misner,Kip S. Thorne,John Archibald Wheeler,2017-10-03 First published in 1973 Gravitation is a landmark graduate level textbook that presents Einstein s general theory of relativity and offers a rigorous full year course on the physics of gravitation Upon publication Science called it a pedagogic masterpiece and it has since become a classic considered essential reading for every serious student and researcher in the field of relativity This authoritative text has shaped the research of generations of physicists and astronomers and the book continues to influence the way experts think about the subject With an emphasis on geometric interpretation this masterful and comprehensive book introduces the theory of relativity describes physical applications from stars to black holes and gravitational waves and portrays the field s frontiers The book also offers a unique alternating two track pathway through the subject Material focusing on basic physical ideas is designated as Track 1 and formulates an appropriate one semester graduate level course The remaining Track 2 material provides a wealth of advanced topics instructors can draw on for a two semester course with Track 1 sections serving as prerequisites This must have reference for students and scholars of relativity includes a new preface by David Kaiser reflecting on the history of the book s publication and reception and a new introduction by Charles Misner and Kip Thorne discussing exciting developments in the field since the book s original publication The book teaches students to Grasp the laws of physics in flat and curved spacetime Predict orders of magnitude Calculate using the principal tools of modern geometry Understand Einstein s geometric framework for physics Explore applications including neutron stars Schwarzschild and Kerr black holes gravitational collapse gravitational waves cosmology and so much more The Orthogonal Trilogy Greg Egan,2016-10-18 The complete Orthogonal Trilogy by Greg Egan Containing The Clockwork Rocket The Eternal Flame and The Arrows of Time **The Cambridge Companion to Science Fiction** Edward James,Farah Mendlesohn,2003-11-20 Table of contents **Medical Image Computing and Computer-Assisted Intervention - MICCAI 2014** Polina Golland,Nobuhiko Hata,Christian Barillot,Joachim Hornegger,Robert Howe,2014-08-31 The three volume set LNCS 8673 8674 and 8675 constitutes the refereed proceedings of the 17th International Conference on Medical Image Computing and Computer Assisted Intervention MICCAI 2014 held in Boston MA USA in September 2014 Based on rigorous peer reviews the program committee carefully selected 253 revised papers from 862 submissions for presentation in three volumes The 100 papers included in the second volume have been organized in the following topical sections biophysical modeling and simulation atlas based transfer of boundary conditions for biomechanical simulation temporal and motion modeling computer aided diagnosis pediatric imaging endoscopy ultrasound imaging machine learning cardiovascular
