Shadow Point:

Shadow Point Amy Briant, 2010-12-01 It wasn't easy getting to Shadow Point Turns out it's even harder to leave Madison McPeake not in the best mood most of the time has just been not quite fired told her brother is dead discovered she's responsible for a five year old niece she's never met and realized she has to go all the way to San Diego to see to her brother's affairs Isolated from the world by geography and a navy base bristling with security Shadow Point is scarcely habitable at least Madison thinks so Coping with the living conditions while getting to know her niece is a daily challenge Things get easier when the next door neighbor Dr Alice Piper seems as eager to share smoldering glances as Madison is But something's not right and Madison's questions about her brother's death go unanswered Madison's not sure if unnerving events are actually subtle warnings to stop her inquiries The sexy alluring Piper doesn't seem to think anything's amiss which only compounds Madison's fears And every time she makes up her mind to pack up her niece and go it's as if someone or something has decided she should stay Debut writer Amy Briant has crafted a heroine with more vices than graces in Madison McPeake who narrates the mystery and passion and hair raising surprises of Shadow Point

GPU-Based Techniques for Global Illumination Effects Laszlo Szirmay-Kalos, Laszlo Szecsi, Mateu Sbert, 2022-05-31 This book presents techniques to render photo realistic images by programming the Graphics Processing Unit GPU We discuss effects such as mirror reflections refractions caustics diffuse or glossy indirect illumination radiosity single or multiple scattering in participating media tone reproduction glow and depth of field The book targets game developers graphics programmers and also students with some basic understanding of computer graphics algorithms rendering APIs like Direct3D or OpenGL and shader programming In order to make the book self contained the most

important concepts of local illumination and global illumination rendering graphics hardware and Direct3D HLSL programming are reviewed in the first chapters After these introductory chapters we warm up with simple methods including shadow and environment mapping then we move on toward advanced concepts aiming at global illumination rendering Since it would have been impossible to give a rigorous review of all approaches proposed in this field we go into the details of just a few methods solving each particular global illumination effect However a short discussion of the state of the art and links to the bibliography are also provided to refer the interested reader to techniques that are not detailed in this book The implementation of the selected methods is also presented in HLSL and we discuss their observed performance merits and disadvantages In the last chapter we also review how these techniques can be integrated in an advanced game engine and present case studies of their exploitation in games Having gone through this book the reader will have an overview of the state of the art will be able to apply and improve these techniques and most importantly will be capable of developing brand new GPU algorithms

Shape, Contour and Grouping in Computer Vision David A. Forsyth, Joseph L. Mundy, Vito di Gesù, Roberto Cipolla, 1999-11-03 Computer vision has been successful in several important applications recently Vision techniques can now be used to build very good models of buildings from pictures quickly and easily to overlay operation planning data on a neurogeon's view of a patient and to recognise some of the gestures a user makes to a computer Object recognition remains a very difficult problem however The key questions to understand in recognition seem to be 1 how objects should be represented and 2 how to manage the line of reasoning that stretches from image data to object identity An important part of the process of recognition perhaps almost all of it involves assembling bits of image information into helpful groups There is a wide variety of possible criteria by which these groups could be established a set of edge points that has a symmetry could be one useful group others might be a collection of pixels shaded in a particular way or a set of pixels with coherent colour or

texture Discussing this process of grouping requires a detailed understanding of the relationship between what is seen in the image and what is actually out there in the world

Local Features in Natural Images via Singularity Theory James Damon, Peter Giblin, Gareth Haslinger, 2016-09-30 This monograph considers a basic problem in the computer analysis of natural images which are images of scenes involving multiple objects that are obtained by a camera lens or a viewer's eye The goal is to detect geometric features of objects in the image and to separate regions of the objects with distinct visual properties When the scene is illuminated by a single principal light source we further include the visual clues resulting from the interaction of the geometric features of objects the shade shadow regions on the objects and the apparent contours We do so by a mathematical analysis using a repertoire of methods in singularity theory This is applied for generic light directions of both the stable configurations for these interactions whose features remain unchanged under small viewer movement and the generic changes which occur under changes of view directions These may then be used to differentiate between objects and determine their shapes and positions

Measure of the Moon Zdenek Kopal,C.L. Goudas,2012-12-06 After many decades spent in astronomical semi obscurity the Moon has of late suddenly emerged to claim renewed interest on the part of the students of astronomy as well as of other branches of physical science and technology and the reasons which brought this about are indeed of historical significance From time immemorial astronomy has been debarred from the status of a genuine experimental science by the utter remoteness of the objects of its study With the exception of meteors those small freaks of cosmic matter intercepted by the Earth on its perpetual journey through space the properties of all celestial bodies outside the gravitational confines of our planet could be

studied only at a distance namely from the effect of attraction exerted by their masses or from the ciphered message of their light brought to us by nimble footed photons across the intervening gaps of space A dramatic emergence of long range rockets in the last decade bids fair to bring about a profound change in this situation On September 13 1959 a memorable date in the history of human endeavour a man made missile of Russian origin crash landed on the surface of the Moon in the region of its Mare Imbrium and thus ended the age long separation of the Earth and its only natural satellite which lasted not less than 4t billion years *The Complete Raw Workflow Guide* Philip Andrews,2012-11-12 The must have workflow guide for the tens of thousands of photographers shooting in raw [The Drawing Guide](#) Marcius Willson,2023-09-23 Reprint of the original first published in 1873
