

The background of the cover is a detailed illustration of a Space Marine's helmet. The helmet is white with gold-colored circular details. The faceplate is a dark, metallic blue with a stern, almost featureless expression. Behind the faceplate, long, flowing red hair is visible. The helmet is set against a backdrop of a bright blue sky with white clouds and parts of a white mechanical structure, possibly a vehicle or building.

**The Self-Dismembered Man** Guillaume Apollinaire,2012-01-01 Guillaume Apollinaire s final years exactly coincided with the clamorous advent of European Modernism and with the cataclysms of WWI In The Self Dismembered Man poet Donald Revell offers new English translations of the most powerful poems Apollinaire wrote during those years poems of nascent surrealism of combat and of war weariness Here too is Apollinaire s last testament The Pretty Redhead a farewell to the epoch that he as poet convict art critic artilleryman and boulevardier did so much to conjure and sustain until his death on Armistice Day in 1918 Readers of Apollinaire s more familiar early work Alcools Wesleyan 1995 will find here a darker and yet more tender poet a poet of the broken world who shares entirely the world s catastrophe even as he praises to the end its glamour and its strange innocence This English translation facing the original French illuminates Apollinaire s crucial and continuing influence on the European and American avant garde The volume includes a short translator s preface

**Trajectories of Artificial Celestial Bodies as Determined from Observations / Trajectoires des Corps Celestes Artificiels Déterminées D'après les Observations**

J. Kovalevsky,2012-12-06 In May 1962 the International Union of Theoretical and Applied Mechanics IUTAM organized a symposium in Paris on the theory of the movement of the Earth s artificial satellites designated to confront the results of the first spatial experiences with the mechanical point of view The papers submitted during this meeting have been published in 1963 in a collection entitled Dynamics of Satellites by Springer Verlag During the last three years the importance of studies pertaining to the dynamics of artificial satellites has continued to increase and many results due to observations have led to a deeper knowledge of the field of forces in which these objects move particularly the field of gravitation of the Earth the forces due to pressure of radiation friction of the atmosphere etc A new symposium seemed therefore suitable to determine these recent advances However this time it appeared appropriate to consider it more from the point of view of the interpretation obtained from the results of observations determination of orbits and forces existing than from the point of view of the theory of motion For this reason the complete title of the second

symposium is as follows Trajectories of Artificial Celestial Bodies as Determined from Observations *The American Ephemeris and Nautical Almanac* United States Naval Observatory.
