## **Longshore Drift:**

**Geography** David Waugh, 2000 Plate tectonics Earthquakes and volcanoes Weathering and slopes Glaciation Coasts Deserts Weather and climate Soils Biogeography Population Urbanisation Farming and food supply Rural land use Energy resources Manufacturing industries Transport and interdependence World development Living with Long Island's South Shore Larry McCormick, 1984 The south shore of Long Island one of New York's greatest recreational assets is receding at the rate of up to six feet per year In many cases efforts to halt this erosion actually have increased it Buildings once thought safely constructed back from high tidemarks today protrude far into the water Even more the number of homes and facilities built too close to the sea's edge has dramatically increased making the south shore probably less ready to withstand a major storm than at the time of the cataclysmic hurricane of 1938 Thus the question of what to do now to overcome and avoid these hazards takes on real urgency Pointing to past mistakes many Long Islanders insist that only by acting in an informed reasonable way can safe and environmentally sound development be possible for everyone **Foundations of Engineering Geology, Second Edition** A. C. Waltham, WALTHAM, 1993-12-09 The second edition of this well established book provides a readable and highly illustrated overview of the main facets of geology for engineers Each topic is presented as a double page spread with a careful mix of text tables and diagrams Comprehensively updated and with four new sections Foundations of Engineering Geology covers the entire spectrum of topics of interest to both student and professional **Understanding GCSE Geography** Ann Bowen, John Pallister, 2006-05 Extensive research and feedback from teachers has helped us to bring you a new improved edition of Understanding GCSE Geography *Encyclopedia of Coastal Science* M. Schwartz, 2006-11-08 Honorable Mention Award for Excellence in Scholarly and Professional Publishing Maurice Schwartz Editor of the much acclaimed Encyclopedia of Beaches and Coastal Environments Hutchinson Ross 1982 has now brought forth a new volume with a fresh interdisciplinary approach that includes geomorphology ecology engineering technology oceanography and human activities as they relate to coasts Within its covers the Encyclopedia of Coastal Science includes many aspects of the coastal sciences that are only to be found scattered among scientific literature Being broadly interdisciplinary in its treatment of coasts the Encyclopedia of Coastal Science features contributions by 245 well known international specialists in their respective fields and is abundantly illustrated with line drawings and photographs Not only does this volume offer an extensive number of entries it also includes various appendices an illustrated glossary of coastal geomorphology and extensive bibliographic listings This Encyclopedia thus provides a comprehensive reference work for students professionals as well as informed lay readers **Coastal Engineering** Dominic Reeve, Andrew Chadwick, Christopher Fleming, 2004-09-16 The United Nations estimate that by 2004 in excess of 75% of the world's population will live within the coastal zone These regions are therefore of critical importance to a majority of the world's citizens The coastal zone provides important economic transport residential and recreational functions all of which depend upon its physical characteristics appealing

landscape cultural heritage natural resources and rich marine and terrestrial biodiversity This resource is thus the foundation for the well being and economic viability of present and future generations of coastal zone residents The pressure on coastal environments is also being exacerbated by rapid changes in global climate The value of the coastal zone to humanity and the enormous pressure on it provide strong incentives for a greater scientific understanding which can ensure effective coastal engineering practice and efficient and sustainable management Coastal Engineering Processes Theory and Design Practice is the only book providing a thorough introduction to all aspects of coastal processes morphology and design of coastal defences The use of detailed and state of the art modelling techniques are an important theme of this book and there are numerous case studies showing actual examples where mathematical modelling has been applied through engineering judgement With thorough coverage of the theory and practical demonstration of the applications Coastal Engineering Processes Theory and Design Practice is a must have for all students and engineers working in coastal management and engineering

*New Key Geography for GCSE* David Waugh, Tony Bushell, 2002 Now available as a single textbook Key Geography for GCSE has been completely revised and updated to meet all the requirements of the 2002 GCSE Geography specifications The core content from the previous editions has been combined in one textbook Suitable for all the GCSE specifications from each awarding body this edition builds on the popular approach of the revised Key Stage 3 Key Geography series The revised Teacher Resource Guide has been completely rewritten providing generic resources to support the core textbook An Accompanying CD ROM contains all the teacher resources in a downloadable format and editable schemes of work linking the text to each of the GCSE specifications and Standard Grade

The Coastal Environmental Profile of Brunei Darussalam Thia-Eng Chua, L. M. Chou, Marie Sol M. Sadorra, 1987

**Living Geography** James Dobson, John Sander, Judith Woodfield, 2001 Meets the requirements of the Revised National Curriculum Integrated and continuous assessment Re capping and reinforcement throughout Homework and Assessment books that accompany the series contain guidance notes for assessments and provide photocopiable worksheets Support for differentiation Up to date information

*Natural Hazards* Edward A. Keller, Duane E. DeVecchio, 2019-03-29 The new revised fifth edition of Natural Hazards remains the go to introductory level survey intended for university and college courses that are concerned with earth processes that have direct and often sudden and violent impacts on human society The text integrates principles of geology hydrology meteorology climatology oceanography soil science ecology and solar system astronomy The textbook explains the earth processes that drive hazardous events in an understandable way illustrates how these processes interact with our civilization and describes how we can better adjust to their effects Written by leading scholars in the area the new edition of this book takes advantage of the greatly expanding amount of information regarding natural hazards disasters and catastrophes The text is designed for learning with chapters broken into small consumable chunks of content for students Each chapter opens with a list of learning objectives and ends with revision as well as high level critical thinking questions A

Concepts in Review feature provides an innovative end of chapter section that breaks down the chapter content by parts reviewing the learning objectives summary points important visuals and key terms New case studies of hazardous events have been integrated into the text and students are invited to actively apply their understanding of the five fundamental concepts that serve as a conceptual framework for the text Figures illustrations and photos have been updated throughout The book is designed for a course in natural hazards for nonscience majors and a primary goal of the text is to assist instructors in guiding students who may have little background in science to understand physical earth processes as natural hazards and their consequences to society

**Coasts of the British Isles** Terry Jennings, 2004-11 Coasts of Britain explores the geography and the geology of the British Isles by its coastlines Each chapter looks at a particular type of coastline and examines the impact that the physical make up of the landscape has had on the economic and social development The text is written in a lively and stimulating way and is punctuated by superb colour photographs and maps as well as Fact Files which highlight pertinent points Written to support the National Curriculum at Key Stage 2 and 3

*Invitation to Oceanography* Paul R. Pinet, 2003 Invitation to Oceanography Third Edition provides students with a fundamental overview of the four major branches of ocean science geology chemistry physics and biology The approach used is a broad one relying on basic concepts to explain the ocean's many mysteries Anybody whether sailor surfer beachcomber or student can learn about the processes and creatures of the oceans by reading this visually exciting book

**Geological Hazards** Fred G. Bell, 2003-02-27 Natural hazards cost the global economy over 50 000 million per year Two thirds of this is spent on damage repair the remainder represents the cost of predicting preventing and mitigating against disasters Man made hazards such as groundwater pollution subsidence and soil erosion add to this figure Geological Hazards is the first book to consider both natural and man made disasters in a single volume All major geological hazards are examined It presents a state of the art

survey for students on civil engineering and physical geography courses as well as researchers and practicing civil engineers. It examines methods of assessing, evaluating and combatting hazards both natural and man-made. Richly illustrated, it views the subject from an international perspective. *Harbor Island Deep Draft Inshore Port, Nueces County*, 1978 **United States Mine Warfare Center of Excellence (MWCE), Establishment, Corpus Christi Bay Area**, 1995 *Planetary Surface Processes* H. Jay Melosh, 2011-08-25 *Planetary Surface Processes* is the first advanced textbook to cover the full range of geologic processes that shape the surfaces of planetary scale bodies. Using a modern quantitative approach, this book reconsiders geologic processes outside the traditional terrestrial context. It highlights processes that are contingent upon Earth's unique circumstances and processes that are universal. For example, it shows explicitly that equations predicting the velocity of a river are dependent on gravity; traditional geomorphology textbooks fail to take this into account. This textbook is a one-stop source of information on planetary surface processes, providing readers with the necessary background to interpret new data from NASA, ESA, and other space missions. Based on a course taught by the author at the University of Arizona for 25 years, it is aimed at advanced students and is also an invaluable resource for researchers, professional planetary scientists, and space mission engineers. **Fishery Bulletin of the**, 1954 **Coastal Defences** Peter W. French, 2002-01-04 *Coastal Defences* aims to present the broad spectrum of methods that engineers use to protect the coastline and investigates the sorts of issues that can arise as a result. The first section of the book examines traditional hard techniques such as sea walls and groynes, whilst the second looks at the more recent trend of using techniques more sympathetic to nature. By looking at each of the main methods of coastal protection in detail, the book investigates the rationale for using each method and the consequent management issues, presenting a case for and against each of the techniques. **Beaches of the Victorian Coast & Port Phillip Bay** Andrew D. Short, 2006 The aims of this publication are to provide the public with a background to the physical nature and evolution of the beaches along this coast, a description of the beach systems including the role of climate, waves, tides, wind, and biota, and a detailed description of every beach.
