Loos Hamra Region:

The Geology of the Dalskog Dals-Rostock Region, Dalsland, Sweden Pierre Heybroek, 1951 **Proceedings of the Estonian Academy of Sciences, Geology**, 1992 *Geological Evolution of the Earth During the Precambrian* L.J. Salop, 2012-12-06 Progress in Precambrian geology has been exceptionally great indeed quite striking for geologists of the older generation only some 30 40 years ago the Precambrian appeared as an uncertain and even mystic prelude to geologic evolution Even the very name Precambrian means some indistinguishable unit in the early history of the Earth the beginning of which is poorly known At the same time it was obvious that the Precambrian formations are of extremely varied and complex composition and poor knowledge and lack of reliable methods of division and correlation were to blame for the lack of significant progress in studies of this early evolutionary stage of the planet Certainly even at the very start of Precambrian studies the results obtained were quite promising lifting as they did the mysterious veil over the regional Precambrian but they presented no general realistic picture of this early stage in the Earth's evolution at that time Recently this situation has completely changed due to new methods of study of the older formations and due also to the refinement of some well known methods in particular of division dating and correlation of silent metamorphic strata Application of different isotope methods of dating was most important in providing objective rock age and thereby the age of geologic events recorded in these rocks Thus it became possible to reconstruct the oldest geologic period of our planet

Basement and Basins of Eastern North America Ben A. Van der Pluijm, Paul A. Catacosinos, 1996-01-01 **The Loos-Hamra Region** Harry von Eckermann, 1936 *Ser. Ba*, 1968 **Spilites and Spilitic Rocks** G.C. Amstutz, 2012-12-06 The idea for the present Spilite Volume was born during the Spilite Symposium at the XXIIIrd session of the International Geological Congress in Prague 1968 At that time only a restricted number of petrologists working on spilites was present and therefore the group assembled agreed that a Symposium Volume should also include recent papers by many other spilite specialists At the same time it was agreed that the papers presented at the Symposium should be returned to the authors for changes and additions This procedure of upgrading and amending the papers has continued until this year 1973 for various technical and editorial reasons The information presented here is therefore up to date To those familiar with the spilite problem it is obvious that the time had come for a review of its state Also the existing literature had become so voluminous that a monographic review was necessary Following a modern trend the authorship for this review was spread among specialists with variable experience For readers not necessarily familiar with the spilite problem a brief summary is presented here A short historical note is followed first by the observations then by the interpretations finally by some of the major features of scientific logic as they pertain to the problem of the primary or secondary origin of some of the rocks termed spilites and keratophyres

Rock-Forming Minerals William Alexander Deer, Robert Andrew Howie, J. Zussman, 1997 This part deals mainly with the disilicates and ring silicates including the epidote melilite cordierite and tourmaline groups In addition to the minerals dealt

with in the first edition some of the rarer but typical minerals in the calc silicate rocks and the accessory minerals of nepheline syenites and related rocks have been included The orthosilicates in particular the olivine garnet and humite groups are covered in Volume 1A **The Region of Hålia in Dalecarlia, Sweden** Pontus Ljunggren,1954 **Sweden** M. B. Stephens,J. Bergman Weihed,2020-01-02 The solid rock mass of Sweden forms a natural field laboratory revealing insight into the westward growth and reworking of one of the planet s ancient continental nuclei Three major geological units are exposed in different parts of the country the western part of the Fennoscandian Shield mainly sedimentary rocks deposited on this crystalline rock mass and the Caledonide orogen This volume synthesizes the tectonic evolution of Sweden over more than 2500 million years from the Neoarchean to the Neogene Following an introduction describing the lithotectonic framework of the country and the organization of the volume the tectonic evolution is addressed essentially chronologically Different phases of intracratonic rifting accretionary orogeny continent continent collisional orogeny and platformal sedimentation are identified Sweden is one of Europe s major suppliers of metals and the country s mineral resources are also presented in the context of the lithotectonic framework Sweden Lithotectonic Framework Tectonic Evolution and Mineral Resources has been designed to interest a professional geoscientific audience and advanced students of Earth Sciences *GFF* Geologiska föreningen (Sweden),1977 **Ser.
