Eyeblink Conditioning in Psychiatric Conditions - State of the Field and Future Directions Tracy L. Greer,Lucien T. Thompson,2017-09-22 Eyeblink classical conditioning EBC is a model paradigm for associative also termed Pavlovian learning one of the simplest and best understood forms of learning and memory Because EBC paradigms are readily adapted across species the neural substrates of EBC have been well characterized and include but are not limited to the cerebellum and anterior interpositus nucleus the hippocampus and prefrontal cortices The ability to collect EBC data across many different species i e including but not limited to humans also has the distinct advantage of facilitating translational research and therefore may be of particular benefit to elucidate mechanistic changes associated with a wide variety of psychiatric disorders In fact EBC paradigms have been employed to assess individuals with a wide range of neurological deficits including Korsakoff s amnesia Alzheimer s disease as well as normal aging dyslexia inflammatory tremor dystonia and multiple sclerosis and psychiatric disorders including major depressive disorder anxiety disorders schizophrenia autism and alcohol use addiction disorders Individuals with these disorders exhibit differential impairments across different EBC task types e g delay vs trace EBC with some showing impairment in one but not the other task and some showing impairments in both across learning stage e g acquisition discrimination or extinction and across response variables e g magnitude and timing of the conditioned eyeblink motor response modality of the conditioned stimulus Evaluating specific individual differences in the context of variable brain pathology should aid characterization and refinement of our understanding of complex neuropsychiatric disorders The field of psychiatry has seen a transition from more traditional use of symptom clusters to define psychiatric disorders with subsequent examination of associated behaviors and traits to the use of physiological and behavioral indicators to characterize individuals with respect to various psychological domains in line with the National Institute of Mental Health Research Domain Criteria RDoC initiative This approach employs a neuroscience based framework to assess the

pathophysiology of chronic mental illnesses Behavioral and cognitive processes are critical domains of interest in evaluating potential maladaptive patterns that may be indicative of specific psychopathologies Furthermore the rapid development of technological advances that allow for more detailed examination e g EEG MEG MRI fMRI infrared imaging and manipulation e g transcranial magnetic and direct current stimulation of brain functions should enhance our ability to better characterize EBC performance and its utility in characterizing aspects of particular neuropathologies Substantial research evidence exists for the value of EBC paradigms to inform our understanding of the pathophysiologies underlying a wide variety of neurological and psychiatric disorders Despite these findings this readily implemented classic cognitive behavioral paradigm is relatively underutilized in clinical settings This e book highlights recent convergence of clinical and research efforts in this area and aims to promote a resurgent interest in eyeblink classical conditioning and to emphasize the potential for future translational and diagnostic applications of EBC in combination with other techniques to strengthen our understanding of alterations in brain function manifested in behaviors characteristic of specific psychopathologies

Rosenthal,Hiroshi G. Okuno,Hiroshi Okuno,David Rosenthal,2021-01-31 The interest of AI in problems related to understanding sounds has a rich history dating back to the ARPA Speech Understanding Project in the 1970s While a great deal has been learned from this and subsequent speech understanding research the goal of building systems that can understand general acoustic signals continuous speech and or non speech sounds from unconstrained environments is still unrealized Instead there are now systems that understand clean speech well in relatively noiseless laboratory environments but that break down in more realistic noisier environments As seen in the cocktail party effect humans and other mammals have the ability to selectively attend to sound from a particular source even when it is mixed with other sounds Computers also need to be able to decide which parts of a mixed acoustic signal are relevant to a particular purpose which part should be interpreted as speech and which should be interpreted as a door closing an air conditioner humming or another person interrupting Observations such as these have led a number of researchers to conclude that research on speech understanding and on nonspeech understanding need to be united within a more general framework Researchers have also begun trying to understand computational auditory frameworks as parts of larger perception systems whose purpose is to give a computer integrated information about the real world Inspiration for this work ranges from research on how different sensors can be integrated to models of how humans auditory apparatus works in concert with vision proprioception etc Representing some of the most advanced work on computers understanding speech this collection of papers covers the work being done to integrate speech and nonspeech understanding in computer systems Advanced Physics for You Keith Johnson,Simmone Hewett,Sue Holt,John Miller,2000 Designed to be motivating to the student this title includes features that are suitable for individual learning It covers the AS
