**Elliptic Partial Differential Operators and Symplectic Algebra** William Norrie Everitt, L. Markus (Lawrence), 2003 This investigation introduces a new description and classification for the set of all self adjoint operators not just those defined by differential boundary conditions which are generated by a linear elliptic partial differential expression  $A \mathbf{x} \cdot D \sum_{|s| \leq m} a_s \mathbf{x} \cdot D^s$  for all  $\mathbf{x}$  in  $\Omega$  in a region  $\Omega$  with compact closure  $\overline{\Omega}$  and  $C^\infty$  smooth boundary  $\partial\Omega$  in Euclidean space  $\mathbb{R}^n$ . The order  $2m \geq 2$  and the spatial dimension  $n \geq 2$ .

**Mutual Invasibility Implies Coexistence in Spatial Models** Richard Durrett, 2002 In 1994 Durrett and Levin proposed that the equilibrium behavior of stochastic spatial models could be determined from properties of the solution of the mean field ordinary differential equation ODE that is obtained by pretending that all sites are always independent Here we prove a general result in support of that picture We give a condition on an ordinary differential equation which implies that densities stay bounded away from 0 in the associated reaction diffusion equation and that coexistence occurs in the stochastic spatial model with fast stirring Then using biologists notion of invasibility as a guide we show how this condition can be checked in a wide variety of examples that involve two or three species epidemics diploid genetics models predator prey systems and various competition models

**Homogeneous Spaces, Tits Buildings, and Isoparametric Hypersurfaces** Linus Kramer, 2002 This title classifies 1 connected compact homogeneous spaces which have the same rational cohomology as a product of spheres  $S^{n_1} \times \dots \times S^{n_k}$  with  $3 \leq n_1 \leq n_2 \leq \dots \leq n_k$  and  $n_i$  odd As an application it classifies compact generalized quadrangles buildings of type  $C_2$  which admit a point transitive automorphism group and isoparametric hypersurfaces which admit a transitive isometry group on one f

**Noether-Lefschetz Problems for Degeneracy Loci** Jeroen Spandaw, 2003 Studies the cohomology of degeneracy loci This title assumes that  $E$  is ample and globally generated and that  $\psi$  is a general homomorphism In order to study the cohomology of  $Z$  it considers the Grassmannian bundle  $\pi: Y \rightarrow X$  of  $r$  dimensional linear subspaces of the fibre

Gorenstein Liaison, Complete Intersection Liaison Invariants and Unobstructedness Jan Oddvar Kleppe, 2001 This paper

contributes to the liaison and obstruction theory of subschemes in  $\mathbb{P}^n$  having codimension at least three. The first part establishes several basic results on Gorenstein liaison. A classical result of Gaeta on liaison classes of projectively normal curves in  $\mathbb{P}^3$  is generalized to the statement that every codimension  $c$  standard determinantal scheme is a scheme defined by the maximal minors of a  $t \times (t - c + 1)$  homogeneous matrix is in the Gorenstein liaison class of a complete intersection. Then Gorenstein liaison theory is developed as a theory of generalized divisors on arithmetically Cohen-Macaulay schemes. In particular, a rather general construction of basic double G-linkage is introduced which preserves the even G-liaison class. This construction extends the notion of basic double linkage which plays a fundamental role in the codimension two situation. The second part of the paper studies groups which are invariant under complete intersection linkage and gives a number of geometric applications of these invariants. Several differences between Gorenstein and complete intersection liaison are highlighted. For example, it turns out that linearly equivalent divisors on a smooth arithmetically Cohen-Macaulay subscheme belong in general to different complete intersection liaison classes but they are always contained in the same even Gorenstein liaison class. The third part develops the interplay between liaison theory and obstruction theory and includes dimension estimates of various Hilbert schemes. For example, it is shown that most standard determinantal subschemes of codimension 3 are unobstructed and the dimensions of their components in the corresponding Hilbert schemes are computed.

tame extension of real abelian fields      *Triangulations of Oriented Matroids* Francisco Santos, 2002 We consider the concept of triangulation of an oriented matroid We provide a definition which generalizes the previous ones by Billera Munson and by Anderson and which specializes to the usual notion of triangulation or simplicial fan in the realizable case Then we study the relation existing between triangulations of an oriented matroid  $M$  and extensions of its dual  $M^*$  via the so called lifting triangulations We show that this duality behaves particularly well in the class of Lawrence matroid polytopes In particular that the extension space conjecture for realizable oriented matroids is equivalent to the restriction to Lawrence polytopes of the Generalized Baues problem for subdivisions of polytopes We finish by showing examples and a characterization of lifting triangulations
