Regulating Blockchain Philipp Hacker,Ioannis Lianos,Georgios Dimitropoulos,Stefan Eich,2019-08-29 Less than a decade after the Financial Crisis we are witnessing the fast emergence of a new financial order driven by three different yet interconnected dynamics first the rapid application of technology such as big data machine learning and distributed computing to banking lending and investing in particular with the emergence of virtual currencies and digital finance second a disintermediation fuelled by the rise of peer to peer lending platforms and crowd investment which challenge the traditional banking model and may over time lead to a transformation of the way both retail and corporate customers bank and third a tendency of de bureaucratisation under which new platforms and technologies challenge established organisational patterns that regulate finance and manage the money supply These changes are to a significant degree driven by the development of blockchain technology The aim of this book is to understand the technological and business potential of the blockchain technology and to reflect on its legal challenges The book mainly focuses on the challenges blockchain technology has so far faced in its first application in the areas of virtual money and finance as well as those that it will inevitably face and is partially already facing as the SEC Investigative Report of June 2017 and an ongoing SEC securities fraud investigation show as its domain of application expands in other fields of economic activity such as smart contracts and initial coin offerings The book provides an unparalleled critical analysis of the disruptive potential of this technology for the economy and the legal system and contributes to current thinking on the role of law in harvesting and shaping innovation
