Abstract

In Malaysia, like many other countries, problem solving is one of major aspect in mathematics curriculum which required students to apply and to integrate many mathematical concepts and skills as well as making decision. However, students were reported to have difficulties in mathematics problem solving. The focus of this study is to discuss the major mathematics skills and cognitive abilities in learning that caused the difficulties in mathematics problems-solving among students from students' point of view. The study was carried out on three focused group samples that were selected through purposeful sampling. A mixed qualitative and quantitative approach is used in order to have clearer understanding. Apart from the questionnaire given, focused group interviews were carried out. Interviews were recorded and transcribed. Data finding was analyzed descriptively. Data findings showed that respondents lacked in many mathematics skills such as number-fact, visual-spatial and information skills. Information skill was the most critical. The deficiency of these mathematics skills and also of cognitive abilities in learning inhibits the mathematics problems-solving. This understanding on how the deficits influenced the problem-solving is expected to give effective guide lines in preparing diagnostic instruments and learning modules in order to develop the mathematics skills.

1. Introduction

"Mathematics problems are really difficult. I did not know how to do it. That's why I did not finish it. I don't like Maths". These statements are quite familiarly heard when students are inquired about their homework. They seem to be struggling with their homework especially on mathematics problem-solving. Mathematics problem solving is not a topic but a process underlie the whole mathematics programmes which contextually helped concepts and skills to be learned (Ibrahim 1997). Many mathematics skills were involved in problem-solving. However, large numbers of students have not acquired the basic skills they need in mathematics (Mohd Nizam & Rosaznisham 2004; Berch & Mazocco 2007). As a result, many students were reported to face difficulties in mathematics particularly in mathematics problem solving (Tay Lay Heong 2005; Tarzimah 2005; Mohd Johan 2002; Zalina 2005; Lim See Kiat 1995). If teaching and learning process is not equally effective for all students, the difficulties in acquiring mathematic skills by the students could get worsen. Understanding students' difficulties in mathematics skills needed in problem solving is one of the way to assist this group of students.
