*Squimera* Tim Felgentreff, Robert Hirschfeld, Fabio Niephaus, 2018 Software development tools that work and behave consistently across different programming languages are helpful for developers because they do not have to familiarize themselves with new tooling whenever they decide to use a new language Also being able to combine multiple programming languages in a program increases reusability as developers do not have to recreate software frameworks and libraries in the language they develop in and can reuse existing software instead However developers often have a broad choice with regard to tools some of which are designed for only one specific programming language Various Integrated Development Environments have support for multiple languages but are usually unable to provide a consistent programming experience due to different features of language runtimes Furthermore common mechanisms that allow reuse of software written in other languages usually use the operating system or a network connection as the abstract layer Tools however often cannot support such indirections well and are therefore less useful in debugging scenarios for example In this report we present a novel approach that aims to improve the programming experience with regard to working with multiple high level programming languages As part of this approach we reuse the tools of a Smalltalk programming environment for other languages and build a multi language virtual execution environment which is able to provide the same runtime capabilities for all languages The prototype system Squimera is an implementation of our approach and demonstrates that it is possible to reuse development tools so that they behave in the same way across all supported programming languages In addition it provides convenient means to reuse and even mix software libraries and frameworks written in different languages without breaking the debugging experience Integrated Network Management IV A.S. *Principles and Paradigms* Maurizio Gabbrielli, Simone Martini, 2010-03-23 This excellent addition to the UTiCS series of undergraduate textbooks provides a detailed and up to date description of the main principles behind the design and implementation of modern programming languages Rather than focusing on a specific language the book identifies the most important principles shared by large classes of languages To complete this general approach detailed descriptions of the

main programming paradigms namely imperative object oriented functional and logic are given analysed in depth and compared This provides the basis for a critical understanding of most of the programming languages An historical viewpoint is also included discussing the evolution of programming languages and to provide a context for most of the constructs in use today The book concludes with two chapters which introduce basic notions of syntax semantics and computability to provide a completely rounded picture of what constitutes a programming language div

Reflections on Programming Systems Liesbeth De Mol, Giuseppe Primiero, 2019-01-10 This book presents a historical and philosophical analysis of programming systems intended as large computational systems like for instance operating systems programmed to control processes The introduction to the volume emphasizes the contemporary need of providing a foundational analysis of such systems rooted in a broader historical and philosophical discussion The different chapters are grouped around three major themes The first concerns the early history of large systems developed against the background of issues related to the growing semantic gap between hardware and code The second revisits the fundamental issue of complexity of large systems dealt with by the use of formal methods and the development of grand designs like Unix Finally a third part considers several issues related to programming systems in the real world including chapters on aesthetical ethical and political issues This book will interest researchers from a diversity of backgrounds It will appeal to historians

philosophers as well as logicians and computer scientists who want to engage with topics relevant to the history and philosophy of programming and more specifically the role of programming systems in the foundations of computing

oriented seems to be becoming in the 1980s what structured programming was in the 1970s Brian Randell and Pete Lee This quotation is from the invitation to the annual Newcastle University Conference on Main Trends in Computing September 1988 It seems to capture the situation quite well only that the object orientation is being materialised in languages and language constructs as well as in the style of programming and as a perspective upon the task considered The second European Conference on Object Oriented Programming ECOOP 88 was held in Oslo Norway August 15 17 1988 in the city where object oriented programming was born more than 20 years ago when the Simula language appeared The objectives of ECOOP 88 were to present the best international work in the field of object oriented programming to interested participants from industry and academia and to be a forum for the exchange of ideas and the growth of professional relationships

ECOOP '87. European Conference on Object-Oriented Programming Jean Bezivin, Jean-Marie Hullot, Pierre Cointe, Henry Lieberman, 2007-03-06 In October 1983 an informal meeting was organized in Le Cap d'Agde with the help of the BIGRE bulletin Sixty people turned out to hear more than ten presentations on object oriented programming More important was their unanimous demand for other more structured encounters So about one year later the Object group was created by AFCET A second workshop was organized in Brest and again one year later in Paris each time showing increased attendance and interest The success of these meetings and the fact that similar activities were taking place in other European countries especially Great Britain and Germany led to the idea of an annual European Conference providing a forum for theorists and practitioners interested in the object oriented programming paradigm It is impossible to acknowledge here all the people and organizations that welcomed with great enthusiasm the birth of the ECOOP conference and contributed to its organization More than a hundred submissions were received and the program committee had the unpleasant task of turning down many valuable contributions We hope however that the selection of papers for ECOOP 87 emphasizes the fundamental issues and problems of object oriented programming and will point toward interesting future research directions **InfoWorld**
