desired properties of the system of instruments are used as constraints while the cost is minimized These properties among others are variable observability system reliability and precision of certain variables This book is not a textbook Rather it is intended to be an organized collection of the most relevant work in this area It has been written with the intention of making it readable by engineers with some background in linear algebra mathematical optimization and graph theory It is organized so that the complexity of the sensor network design is addressed step by step The information in this new book serves the needs of chemical and other process engineers involved in instrumentation and control maintenance plant operations process design process development quality control safety and loss prevention Illustrations and Tables The text is supplemented with more than 100 flow charts diagrams and other schematics that illustrate procedures systems and instrumentation More than 70 tables provide useful reference data The Author Dr Miguel J Bagajewicz brings to this new book his extensive experience in design data management teaching and writing in the area of process engineering He received his M S and Ph D in Chemical Engineering from the California Institute of Technology He is presently Associate Professor School of Chemical Engineering and Materials Science and Director Center for Engineering Optimization at the University of Oklahoma He is the author or co author of more than 100 journal articles conference presentations and reports and the author of articles on data reconciliation and sensor location in the Instrument Engineers Handbook fourth edition He is a member of the American Institute of Chemical Engineers AIChE and on the executive committee of the Central Oklahoma Chapter
