Molecule-Based Materials Lars Öhrström,Krister Larsson,2005-12-02 The properties of a material depend not only on the specific atoms and molecules it contains but also on the arrangement of these in space Many of these three dimensional arrangements are described as 3D nets or 3D networks Molecule Based Materials The Structural Network Approach is about the synthesis description nomenclature and analysis of such nets and the relation of the nets to the physical properties of the materials It introduces the mathematics and includes a short guide to programs useful for retrieving analysing and naming nets Complete with illustrations and examples of coordination polymer and hydrogen bonded nets this unique easy to read book examines all aspects of 3D nets and will undeniably prove itself valuable to newcomers well seasoned students and researchers working in crystallography inorganic or organic chemistry Covers all aspects of molecule based 3D nets complete with 3D illustrations Contains summary tables of all nets Easy reading eliminates the need for background knowledge in crystallography or mathematics

Ariens, 2012-12-02. *Molecular Pharmacology The Model of Action of Biologically Active Compounds Volume 1* discusses the mode of action of bioactive compounds on a molecular level. This book reviews the processes that control the uptake of drugs, their diffusion through tissues, as well as their metabolism and excretion. Comprised of three sections, this volume starts with an overview of the different aspects of drug distribution and metabolism. This text then examines the totality of intermolecular processes or reactions between drug and receptor molecules, which is known as drug receptor interaction. Other chapters explore the actions of various pharmacodynamic agents including hormones and substances with selective toxicity, auxins, and odorants. This book discusses as well the ways in which the actions of drugs combine with the tissues and act upon themselves. The final chapter deals with the complicated types of relations between stimulus and effect.
