Philosophy Of Chemistry Between The Manifest And The Scientific Image:

Philosophy of Chemistry Jaap Brakel, 2000 This book addresses themes in the newly emerging discipline of philosophy of chemistry in particular issues in connection with discussions in general philosophy of science on natural kinds reduction and ceteris paribus laws The philosophical issue addressed in all chapters is the relation between on the one hand the manifest image the daily practice or common sense life form and on the other the scientific image both of which claim to be the final arbiter of everything With respect to chemistry the question raised is this Where does this branch of science fit in with the manifest or scientific image Most philosophers and chemists probably would reply unhesitatingly the scientific image The aim of this book is to raise doubts about that self evidence It is argued that chemistry is primarily the science of manifest substances whereas micro or submicro scientific talk though important useful and insightful does not change what matters namely the properties of manifest substances These manifest substances their properties and uses cannot be reduced to talk of molecules or solutions of the Schrödinger equation If submicroscopic quantum mechanics were to be wrong it would not affect all or any microlevel chemical knowledge of molecules If molecular chemistry were to be wrong it wouldn't disqualify knowledge of say water not at the macrolevel e.g. its viscosity at 50 °C nor at the pre or protoscientific manifest level e.g. ice is frozen water

The Philosophy of Chemistry Jean-Pierre Llored, 2014-09-26 This volume connects chemistry and philosophy in order to face questions raised by chemistry in our present world The idea is first to develop a kind of philosophy of chemistry which is deeply rooted in the exploration of chemical activities We thus work in close contact with chemists technicians engineers researchers and teachers Following this line of reasoning the first part of the book encourages current chemists to describe their workaday practices while insisting on the importance of attending to methodological metrological philosophical and epistemological questions related to their activities It deals with sustainable chemistry chemical metrology nanochemistry and biochemistry among other crucial topics In doing so those chemists invite historians and philosophers to provide ideas for future developments In a nutshell this part is a call for forthcoming collaborations focused on instruments and methods that is on ways of doing chemistry The second part of the book illustrates the multifarious ways to study chemistry and even proposes new approaches to doing so Each approach is interesting and incomplete but the emergent whole is richer than any of its components Analytical work needs socio historical expertise as well as many other approaches in order to keep on investigating chemistry to greater and greater depth This heterogeneity provides a wide set of methodological perspectives not only about current chemical practices but also about the ways to explore them philosophically Each approach is a resource to study chemistry and to reflect upon what doing philosophy of science can mean In the last part of the volume philosophers and chemists propose new concepts or reshape older ones in order to think about chemistry The act of conceptualization itself is queried as well as the relationships between concepts and chemical activities Prefaced by Nobel Laureate in Chemistry Roald Hoffmann and by the President of the International

Society for the Philosophy of Chemistry Rom Harr this volume is a plea for the emergence of a collective cleverness and aims to foster inventiveness

Philosophy of Chemistry Eric Scerri, Lee McIntyre, 2014-11-11 This volume follows the successful book which has helped to introduce and spread the Philosophy of Chemistry to a wider audience of philosophers historians science educators as well as chemists physicists and biologists The introduction summarizes the way in which the field has developed in the ten years since the previous volume was conceived and introduces several new authors who did not contribute to the first edition The editors are well placed to assemble this book as they are the editor in chief and deputy editors of the leading academic journal in the field Foundations of Chemistry The philosophy of chemistry remains a somewhat neglected field unlike the philosophy of physics and the philosophy of biology Why there has been little philosophical attention to the central discipline of chemistry among the three natural sciences is a theme that is explored by several of the contributors This volume will do a great deal to redress this imbalance Among the themes covered is the question of reduction of chemistry to physics the reduction of biology to chemistry whether true chemical laws exist and causality in chemistry In addition more general questions of the nature of organic chemistry biochemistry and chemical synthesis are examined by specialist in these areas

Practical Realist Philosophy of Science Jaana Eigi-Watkin, Endla Lõhkivi, Ave Mets, Peeter Mürsepp, 2024-05-07 The Estonian philosopher of science Rein Vihalemm 1938 2015 left two prominent and fruitful philosophical methodological legacies that continue to captivate philosophers of science a methodological distinction of scientific disciplines and the practical realist philosophy of science Edited by Ave Mets Endla Lõhkivi Peeter Mürsepp and Jaana Eigi-Watkin Practical Realist Philosophy of Science Reflecting on Rein Vihalemm's Ideas explores some of these fruits that have sprung from philosophy of science and the applications of those approaches through three main ideas backgrounds of the practical approach metaphysics of practices and special sciences The first part features authors who juxtapose Vihalemm's approach with those of prominent philosophers on the practical and material basis of cognition providing support and refinement to his framework The second part delves into the metaphysical aspects of science and practices and comprehending them The third part centers around examples of Vihalemm's approach to specific scientific disciplines within chemistry biology and humanities These diverse implications outlined in this book supported by solid ground and compelling argumentation offer an original contribution to this field

International Handbook of Research in History, Philosophy and Science Teaching Michael R. Matthews, 2014-07-03 This inaugural handbook documents the distinctive research field that utilizes history and philosophy in investigation of theoretical, curricular, and pedagogical issues in the teaching of science and mathematics. It is contributed to by 130 researchers from 30 countries; it provides a logically structured, fully referenced guide to the ways in which science and mathematics education is informed by the history and philosophy of these disciplines, as well as by the philosophy of education more generally. The first handbook to cover the field, it lays down a much-needed marker of progress to date and provides a platform for informed and coherent future analysis and research of the subject. The publication comes at a time of heightened worldwide concern over the standard of science and mathematics education, attended by fierce debate over how best to reform curricula and enliven student engagement in the subjects. There is a growing recognition among educators and policy makers that the learning of science must dovetail with learning about science; this handbook is uniquely positioned as a locus for the discussion. The handbook features sections on pedagogical, theoretical, national, and biographical research, setting the literature of each tradition in its historical context. It reminds readers at a crucial juncture that there has been a long and rich tradition of historical and philosophical engagements with science and mathematics teaching, and that lessons can be learnt from these engagements for the resolution of current theoretical, curricular, and pedagogical questions that face teachers and administrators. Science educators will be grateful for this unique encyclopaedic handbook. Gerald Holton, Physics Department, Harvard University. This handbook gathers the fruits of over thirty years' research by a growing international and cosmopolitan community. Fabio Bevilacqua, Physics Department, University of Pavia.

Science: A-M Sahotra Sarkar, Jessica Pfeifer, 2006 The first in depth reference to the field that combines scientific knowledge with philosophical inquiry this encyclopedia brings together a team of leading scholars to provide nearly 150 entries on the essential concepts in the philosophy of science The areas covered include biology chemistry epistemology and metaphysics physics psychology and mind the social sciences and key figures in the combined studies of science and philosophy Midwest The Rise of Realism Manuel DeLanda, Graham Harman, 2018-03-15 Until quite recently almost no philosophers trained in the continental tradition saw anything of value in realism The situation in analytic philosophy was always different but in continental philosophy realism was usually treated as a pseudo problem That is no longer the case In this provocative new book two leading philosophers examine the remarkable rise of realism in the continental tradition While exploring the similarities and differences in their own positions they also consider the work of others and assess rival trends in contemporary philosophy They begin by discussing the relation between realism and materialism which DeLanda links closely but which Harman tries to separate Part Two covers the many different meanings of realism with the two authors working together to develop an expanded definition of the term Part Three features a spirited exchange on the respective virtues and drawbacks of DeLanda's realism of attractors and singularities and Harman's object oriented theory Part Four shifts to the question of the knowability of the real as the authors discuss whether scientific knowledge does full justice to reality In Part Five they shift the focus to space time and science more generally and here Harman offers a defence of actor network theory despite its obvious anti realist elements Lively accessible and engaging this book is the best attempt so far to clarify the different paths for realism in continental philosophy It will be of great value to students and scholars of continental philosophy and to anyone interested in the cutting edge debates in philosophy and critical theory today
