Handbook of Operant Behavior Werner K. Honig, J. E. R. Staddon, 2022-02-21 This classic edition of the Handbook of Operant Behavior presents seminal work in the field of learning and behavior foreshadowing a new direction for learning research and presenting many questions that remain unanswered Featuring impressive contributions from leading figures across the field ranging from N. J. Mackintosh from what was to become the cognitive school through Morse Kelleher Hutchinson and Hineline on the neglected topic of aversive control to Blough and Blough on psychophysics to Philip Teitelbaum on behavioral physiology the book is a must read for anyone interested in human and animal learning In a newly written introduction J. E. R. Staddon highlights several issues that deserve more attention how language is learned and syntax evolves how animals choose and a new paradigm for the study of learning in general The book is essential reading for all students and researchers of learning and behavior and aims to encourage researchers to revisit some of the fascinating behavioral questions raised by the original book

Schizophrenia David John Kavanagh, 2013-11-11 **Computational Modelling of Objects Represented in Images. Fundamentals, Methods and Applications** João Manuel R.S.

Tavares, Jorge R.M. Natal, 2018-05-08 This book contains keynote lectures and full papers presented at the International Symposium on Computational Modelling of Objects Represented in Images CompIMAGE held in Coimbra Portugal on 20-21 October 2006. International contributions from nineteen countries provide a comprehensive coverage of the current state of the art in the fields of Image Processing and Analysis, Image Segmentation, Data Interpolation, Registration, Acquisition and Compression, 3D Reconstruction, Objects Tracking, Motion and Deformation Analysis, Objects Simulation, Medical Imaging, Computational Bioimaging and Visualization. Related techniques also covered in this book include the finite element method, modal analyses, stochastic methods, principal and independent components analyses and distribution models. Computational Modelling of Objects Represented in Images will be useful to academics, researchers and professionals in Computational Vision, image processing and analysis, Computer Sciences and Computational Mechanics. *Detection of Change* John Polich, 2012-12-06 Detection of Change: Event Related Potential and fMRI Findings presents the first systematic overview of how event related brain potential (ERP), cognitive electroencephalography (EEG) and functional magnetic imaging (fMRI) measures reflect the mental events arising from changes in sensory stimulation. Reviews by leading experts provide clarifying introductory background material that is well integrated with the cogently collated findings. Topics include the empirical and theoretical analysis of mismatch negativity (P300), human lesion studies and stimulus binding. These areas provide the backdrop for summaries of auditory/visual ERP interactions, the conjoint use of fMRI methods and neuroelectric processing models of attention and memory. The contents are fresh, the literature distillations highly informative and the range of topics extremely useful. This book fills a major need by making contemporary results highly assessable to cognitive neuroscientists, psychologists and researchers interested in the neural underpinnings of how the brain responds to stimulus change.

Cumulated Index Medicus, 1965 **Supernormal** Dean Radin PhD, 2013-07-16 Can yoga and meditation unleash our inherent supernormal mental powers such as telepathy, clairvoyance and precognition? Is it really possible to perceive another person's thoughts and intentions? Influence objects with our minds? Envision future events? And is it possible that some of the superpowers described in ancient legends, science fiction and comic books are actually real and patiently waiting for us behind the scenes? Are we now poised for an evolutionary trigger to pull the switch and release our full potentials? Dean Radin, Director of Research at the Institute of Noetic Sciences (IONS) and bestselling author of *The Conscious Universe* presents persuasive new experimental evidence for the existence of such phenomena. He takes us on a thrilling scientific journey and challenges outdated assumptions that these abilities are mere superstition. Focusing on Patanjali's mysterious Yoga Sutras, 2,000 year old meditation practices believed to release our extraordinary powers, Radin offers powerful evidence confirming that sometimes fact is much stranger, spookier and more wonderful than the wildest fiction. *Pharmacokinetics and Pharmacodynamics of Abused Drugs* Steven B. Karch, MD, FFFLM, 2007-10-09 This book is a concise and focused volume on the metabolism and measurable effects of drugs on the human body. Beginning with basic concepts and models, the book

details the specifics of absorption distribution and elimination mechanisms and rates of commonly abused drugs It analyzes the effects of drug use on human performance including response time memory and cognition and physiological changes Packed with data and comparative studies this handy volume considers the effects of marketed and prescription medications as well as illicit drugs Containing 29 figures and tables and extensive references this is a must have resource for the influence of drug use and abuse on human physiology and performance *National Library of Medicine Current Catalog* National Library of Medicine (U.S.),1992
