Wepman,2017-07-12 The psychologist who pursues an interest in personality is constantly faced by a dilemma He seeks to investigate what is to him the most intriguing and interesting subject the multifaceted operations of man in his natural environment The predicament lies in the discrepancy between the complexity and richness of man s subjective experience and the pallid analog of these experiences the psychologist is able to study effectively with the research procedures available to him In Concepts of Personality Joseph M Wepman and Ralph W Heine offer a comprehensive survey of classical and contemporary personality theory including a wide array of examples of these two trends If the psychologist holds to the premises of strict objectivity through controlled observations he finds himself driven to the periphery of the very problem he seeks to understand This is a place where the reliability of measurement and the validity and predictability of his instruments can often be specified but only at the cost of abandoning the goal of useful generality or of application to the individual in his ordinary life circumstances Concepts of Personality unlike most books on the subject is not limited to broad general theories It includes chapters on basic processes learning perception genetics and drive theory on the major analytical approaches of psychology and psychiatry on anthropological and sociological contributions and on the problems of measurement and assessment Each chapter is by an authority on the point of view expressed The editors introduction itself a major essay on the complex and divergent patterns and themes of contemporary views of personality carefully leads the reader through the information at hand The book as a whole constitutes an encyclopedic summary of the state of the science
