Computational Explorations in Cognitive Neuroscience Randall C. O'Reilly, Yuko Munakata, 2000-08-28 This text based on a course taught by Randall O'Reilly and Yuko Munakata over the past several years provides an in depth introduction to the main ideas in the computational cognitive neuroscience The goal of computational cognitive neuroscience is to understand how the brain embodies the mind by using biologically based computational models comprising networks of neuronlike units This text based on a course taught by Randall O'Reilly and Yuko Munakata over the past several years provides an in depth introduction to the main ideas in the field The neural units in the simulations use equations based directly on the ion channels that govern the behavior of real neurons and the neural networks incorporate anatomical and physiological properties of the neocortex Thus the text provides the student with knowledge of the basic biology of the brain as well as the computational skills needed to simulate large scale cognitive phenomena The text consists of two parts The first part covers basic neural computation mechanisms individual neurons neural networks and learning mechanisms The second part covers large scale brain area organization and cognitive phenomena perception and attention memory language and higher level cognition The second part is relatively self contained and can be used separately for mechanistically oriented cognitive neuroscience courses Integrated throughout the text are more than forty different simulation models many of them full scale research grade models with friendly interfaces and accompanying exercises The simulation software PDP is available for all major platforms and simulations can be downloaded free of charge from the Web Exercise solutions are

Methods in Bilingual Reading Comprehension

Research Roberto R. Heredia, Jeanette Altarriba, Anna B. Cieślicka, 2015-10-17 The collected essays in this volume present an overview and state of the field of traditional and recently developed methodological approaches to the study of bilingual reading comprehension. It critically reviews and examines major findings from classical behavioral approaches such as the visual moving window, rapid serial visual presentation (RSVP) and eye tracking, as well as newly developing neuropsycholinguistic methodologies such as Event Related Potentials (ERPs) and Functional Magnetic Resonance Imaging (fMRI). Written to address a timely topic, *Methods in Bilingual Reading Comprehension Research* updates the field of bilingual reading by critically examining the contributions of the various behavioral and technologically based reading techniques used to understand psychological processes underlying written language comprehension. Each topic is covered first from a theoretical and then from an experimental viewpoint. Moreover, the volume contributes to the development and establishment of Bilingual Reading as a subfield of bilingual sentence processing and fills a significant gap in the literature on bilingual language processing and thought. Significantly, *Methods in Bilingual Reading Comprehension Research* presents an overall view of some of the typical psycholinguistic techniques and approaches, as well as proposing other possible tasks that may prove viable in investigating such theoretical issues as bilingual lexical ambiguity resolution or how bilingual speakers might resolve multiple sources of potentially conflicting information as they comprehend sentences and discourse during the communicative process. In addition to aid reader comprehension and encourage readers to acquire hands-on experience in the creation and development of experiments in the realm of bilingual reading research, each chapter includes a list of key words, suggested student research projects and questions to both help the reader review the chapter and expand upon the reading. With its comprehensive coverage of a crucial subfield of psycholinguistics and language processing, *Methods in Bilingual Reading Comprehension Research* is an invaluable and informative resource for all students and researchers in bilingualism, neurolinguistics, bilingual cognition and other related fields.

The Sage Handbook of Cognitive and

Systems Neuroscience Gregory J. Boyle, Georg Northoff, Aron K. Barbey, Felipe Fregni, Marjan Jahanshahi, Alvaro Pascual-Leone, Barbara J. Sahakian, 2023-11-15 Cognitive neuroscience is the interdisciplinary study of how cognitive and intellectual functions are processed and represented within the brain, which is critical to building understanding of core psychological and behavioural processes such as learning, memory, behaviour, perception and consciousness. Understanding these processes not only offers relevant fundamental insights into brain-behavioural relations but may also lead to actionable knowledge that can be applied in the clinical treatment of patients with various brain-related disabilities. This Handbook examines complex cognitive systems through the lens of neuroscience, as well as providing an overview of development and applications within cognitive and systems neuroscience research and beyond. Containing 35 original state-of-the-art contributions from leading experts in the field, this Handbook is essential reading for researchers and students of cognitive
