Bocci, 2013-06-29 When I was about fifteen my Biological Sciences teacher Prof N Benacchio lent me a book by Paul de Kruif The Microbe Hunters and I remained fascinated by infectious diseases I was intrigued by the potency of virulent bacteria which are constantly trying to invade our bodies and often overcome what today we call innate and adoptive immunity Indeed shortly after that I was struck by his tragic death due to peritonitis Later while studying medicine although medical knowledge in the 1950s was almost primordial compared with today I soon realised how the various biological systems were wonderfully organised but at the same time frail and how our life could end in a few minutes Slowly it became obvious that our wellness was the result of a dynamic and very unstable equilibrium between health and disease This unstable equilibrium could be broken forever if the body's response could not reverse the pathological state I stuck a sort of poster on the wall of my room with these three words and

Robin Harris, 2007-09-04 A volume within the Subcellular Biochemistry series is an appropriate setting for the first multi author book devoted to the new family of antioxidant and cell signalling proteins the peroxiredoxins Within the antioxidant and cell signalling fields even the existence of the peroxiredoxins has yet to be appreciated by many with this book we aim to rectify this situation We have tried to select diverse chapter topics to cover relevant aspects of the subject and to persuade knowledgeable authors to contribute a manuscript As almost inevitable a few authors let us down by failing to respond others could not submit a manuscript in time for personal reasons These unfortunately were two of the pioneers Earl Stadtman and Sue Goo Rhee but we appreciate that they communicated a lot of details that helped us to reconstruct the early phase of peroxiredoxin enzymology We have thus compiled a book that competently covers the peroxiredoxin field from its beginnings through to currently relevant topics In the introductory Chapter 1 we provide a short historical survey of the subject based upon the early structural and enzymic studies on peroxiredoxins and then lead into some of our current personal interests such as the likely continuing contribution of transmission electron microscopy TEM for the study of high molecular mass peroxiredoxin complexes and the association of peroxiredoxins with other proteins and the targeting of drugs against microbial peroxiredoxins as future therapeutic approaches      *Oxidative Eustress in Exercise Physiology* James N.
