Nuclear Energy and Liability in South Asia M. P. Ram Mohan, 2015-04-15 This book advocates pursuing a regional approach to nuclear risk framework which it argues is more promising in the current scenario than the non achievable global regime In the development of international legislation on liability the nuclear energy sector represents an alternative approach to a transboundary liability regime Building on this foundation and following the Chernobyl accident international consensus was sought for a stronger transboundary legal regime in the event of a nuclear disaster However after sixty years of the existence of international nuclear liability laws and twenty five years after Chernobyl the primary objectives of the Conventions harmonization and a global regime remain unfulfilled Further many countries are now creating or expanding nuclear programs without adequate transboundary legal protection In light of these issues a regional approach is an option that cannot be ignored Given its rapidly expanding nuclear energy footprint South Asia is in a unique position to adopt a regional mechanism The methodology adopted for the study in the book combines a literature review of international law on nuclear liability with an analysis of South Asian nuclear energy programs and their international and national legal obligations A technical risk assessment study conducted to identify the level of transboundary nuclear risk within South Asia is also presented This is followed by interviews with experts and policymakers to gauge the willingness of the South Asian Association for Regional Cooperation SAARC community to respond to this shared regional concern **Sharing the Costs**

and Benefits of Energy and Resource Activity Lila Barrera-Hernández, Barry Barton, Lee Godden, Alastair Lucas, Anita Rønne, 2016-03-31 A new phase is emerging in the relationship between energy and resource activities and the communities that are affected by them Any energy or resource project a mine a wind farm a dam for hydroelectricity or a shale gas development will involve a mix of impacts and benefits for communities For many years the law has mediated impacts on communities and provided for the distribution of financial benefits Now there is growing awareness of the need to consider

not only a wider range of costs and benefits for communities from energy and resource projects but also the effects on communities at multiple scales and in complex ways Sharing the costs and benefits of natural resource activity has now become a legal requirement for energy and resource projects operating in many jurisdictions particularly in developing countries This book uses cases studies from across the globe to examine the emergence of such legal measures their advantages and disadvantages and the improvements that may be feasible in the legal frameworks used to distribute the costs and benefits of energy and resources activity The book has three parts Part I considers general legal and conceptual frameworks Part II addresses the mechanisms available to distribute costs and benefits and Part III considers the role of public engagement and participation in the sharing of the costs and benefits from energy and resource projects
