In existence since 1962, Geographical Information Systems (GIS) are really coming into their own today. And not just in your car's GPS system or your cell phone's tracking capabilities. GIS is finding applications throughout science, government, business, and industry, from regional and community planning, architecture, and transportation to public health, crime mapping, and national defense. Then join in the excitement of discovery with GIS databases as you absorb the such concepts and skills as digital geographic data and maps, GIS data models, spatial analysis, measurement, and classification, cartographic modeling, and GIS design. Responding to both the needs and technical skills of today's students, this Fourth Edition makes concepts accessible to students from a wide range of backgrounds. Offers more practical and relevant coverage of GIS design and implementation. Reflects the latest changes in GIS applications. Examines in greater depth the underlying computer science behind GIS. Uncovers the most recent developments on GIS research. Expands coverage of the increasingly robust literature on cartographic visualization. Includes Web-based labs and links to current and updated dataset resources. Taking an open-ended, hands-on approach that gets you to ask your own questions about the underlying concepts, the Fourth Edition helps you not only master the basics but acquire the active problem-solving skills that are a key component of success in the GIS industry.
