IV. PROCEDURES				
	Teacher's Activity		Learner's Activity	
A. Reviewing previous lesson or presenting the new lesson	Pre-Test: Tell whether the following statement about the concept on the origin of life is a FACT or BLUFF . Write FACT if the statement is true and BLUFF if it is not true. ____ 1. The oldest hypothesis that life came from divine being is the most widely accepted belief. ____ 2. The Miller-Urey experiment suggested that sunlight may have helped trigger the creation of key building blocks of life on Earth during the earliest time periods. ____ 3. Panspermia proposes that a meteor or cosmic dust may have carried to Earth significant amounts of organic molecules, which started the evolution of life. ____ 4. A meteorite that was found in Arctic. Suggested that it had been ejected from Mars possibly by a collision with an asteroid. ____ 5. Based on Pasteur's experiment, spontaneous generation could not occur.		Answer's key: 1. FACT 2. BLUFF 3. FACT 4. FACT 5. FACT	
B. Establishing a purpose for the lesson	The teacher will present to the class the expected lesson objective to be accomplished by the end of the discussion.		Lesson Objective: 1. Describe classic experiments that model conditions that may have enabled the first life forms to evolve.	
C. Presenting examples or instances of the new lesson	How do you think life emerges in our Earth?		Perhaps the most fundamental and at the same time the least understood biological problem is the origin of life. Life is coeternal with matter and has no beginning; life arrived on Earth at the time of Earth's origin or shortly thereafter. Centuries ago, people were puzzled about how life originated on Earth. Lots of concepts about life emerged and many tried to give pieces of evidences. All we know for sure is that it happened after Earth formed 4.5 billion years ago, and before 3.4 billion years ago – the time of the oldest confirmed fossils. Many paleontologists have tried to narrow the window by identifying older traces of life but these findings are disputed. Let's find out how life began on Earth!	
D. Discussing new concepts and practicing new skills #1	What are the different concepts on the origin of life?		CONCEPTS ON THE ORIGIN OF LIFE: 1. ARISTOTLE in the fourth century proposed the idea of Spontaneous generation. It states that life could appear from nonliving material. It held its position until the seventeenth century. They believed that flies could grow from cattle manure, mice from wheat stored in the dark, maggots from decaying meat, fish from mud of previously dried lakes, or lice from sweat. 2. Redi's Experiment (1668) Italian physician Francesco Redi conducted an experiment that challenged the idea of spontaneous generation. His experimental setup involved disproving spontaneous generation using maggots that arose from decaying meat. 3. Needham's Experiment (1748) John Needham, an English priest challenged Redi's Experiment. It was a common knowledge at that time that boiling could kill microorganisms. His experiment tested whether or not microorganisms can appear spontaneously after boiling. 4. Spallanzani's Experiment (1767) Lazzaro Spallanzani, an Italian scientist challenged Needham's experiment. 5. Pasteur's Experiment (1861) By sterilizing a food source and keeping it isolated from the outside, Pasteur observed no putrefaction of the food source (top panel). Upon exposure to the outside environment, Pasteur observed the
