Fundamentals Of Nanotransistors Mark S Lundstrom, 2017-07-11 The transistor is the key enabler of modern electronics Progress in transistor scaling has pushed channel lengths to the nanometer regime where traditional approaches to device physics are less and less suitable These lectures describe a way of understanding MOSFETs and other transistors that is much more suitable than traditional approaches when the critical dimensions are measured in nanometers It uses a novel bottom up approach that agrees with traditional methods when devices are large but that also works for nano devices Surprisingly the final result looks much like the traditional textbook transistor models but the parameters in the equations have simple clear interpretations at the nanoscale The objective is to provide readers with an understanding of the essential physics of nanoscale transistors as well as some of the practical technological considerations and fundamental limits This book is written in a way that is broadly accessible to students with only a very basic knowledge of semiconductor physics and electronic circuits

Power-Aware Computer Systems Babak Falsafi,T. N. Vijaykumar,2004-12-07 Welcome to the proceedings of the 3rd Power Aware Computer Systems PACS 2003 Workshop held in conjunction with the 36th Annual International Symposium on Microarchitecture MICRO 36 The increase in power and energy dissipation in computer systems has begun to limit performance and has also resulted in higher cost and lower reliability The increase also implies reduced battery life in portable systems Because of the magnitude of the problem all levels of computer systems including circuits architectures and software are being employed to address power and energy issues PACS 2003 was the third workshop in its series to explore power and energy awareness at all levels of computer systems and brought together experts from academia and industry These proceedings include 14 research papers selected from 43 submissions spanning a wide spectrum of areas in power aware systems We have grouped the papers into the following categories 1 compilers 2 embedded systems 3 microarchitectures and 4 cache and memory systems The first paper on compiler techniques proposes pointer reuse analysis that is biased by runtime information i e the targets of pointers are determined based on the likelihood of their occurrence at runtime to map accesses to energy efficient memory access paths e g avoid tag match Another paper proposes compiling multiple programs together so that disk accesses across the programs can be synchronized to achieve longer sleep times in disks than if the programs are optimized separately

Cells and Culture Thomas Noll,2010-07-17 Regeneration of tissue to replace damaged or injured tissue is the goal of tissue engineering Biomaterials like polyglycolic acid collagen and small intestinal submucosa provide a temporary scaffold to guide new tissue growth and organization Typically they need to be biodegradable showing good cell attachment and proliferation and they should possess appropriate mechanical properties Kim et al 2000 Synthetic polymers fulfill most of these requirements but lack cell adhesion peptides on their surface to enhance cell attachment Cell adhesion peptides are present in ECM proteins like collagen and elastin Thus a synthetic polymer coated with ECM proteins would result in a scaffold that mimics the natural cellular environment with enhanced cell attachment and proliferation The new bioactive scaffold will be made by combining a synthetic polymer coated with a layer of recombinant ECM proteins produced by CHO cells The first step consists of identifying polymers that give best results in terms of CHO cell attachment and growth Classical techniques to determine biomass are inappropriate to evaluate 3 D structures Thus a screening system based on stable GFP expressing CHO cells was used to compare the different scaffolds Simple fluorescent measurement after cell lysis allows determining cell attachment and proliferation on synthetic polymers Finally CHO cells producing human recombinant collagen I and elastin were generated We showed that both proteins are expressed and secreted by CHO DG44 cells
