**Schizophrenia Research Trends** Konstance V. Almann, 2007 Schizophrenia is a chronic severe and disabling psychosis which is an impairment of thinking in which the interpretation of reality is abnormal Psychosis is a symptom of a disordered brain Approximately One percent of the population worldwide develops schizophrenia during their lifetime Although schizophrenia affects men and women with equal frequency the disorder often appears earlier in men usually in the late teens or early twenties than in women who are generally affected in the twenties to early thirties People with schizophrenia often suffer symptoms such as hearing internal voices not heard by others or believing that other people are reading their minds controlling their thoughts or plotting to harm them The current evidence concerning the causes of schizophrenia are many It is quite clear that multiple factors are involved These include changes in the chemistry of the brain changes in the structure of the brain and genetic factors Viral infections and head injuries may also play a role New molecular tools and modern statistical analyses allow focusing in on particular genes that might make people more susceptible to schizophrenia by affecting for example brain development or neurotransmitter systems governing brain functioning State of the art imaging techniques are being used to study the living brain They have recently revealed specific subtle abnormalities in the structure and function of the brains of patients with schizophrenia In other imaging studies early biochemical changes that may precede the onset of disease symptoms have been noted prompting examination of the neural circuits that are most likely to be involved in producing those symptoms This book presents new and important research in the field

*Hearing (our) Voices* Barbara Schneider, 2010-01-01 Hearing Our Voices describes two innovative participatory action research projects one on communication with medical professionals the other on housing carried out by a group of people diagnosed with schizophrenia under the guidance of Professor Barbara Schneider Participants designed the research conducted interviews and focus groups participated in data analysis and disseminated research results through a number of innovative strategies

including theatre performances a documentary film a graphic novel and a travelling exhibit Emerging from these projects is the central and significant finding that people diagnosed with schizophrenia are caught between their dependence on care and their longing for independent lives The research presented in Hearing Our Voices points to a way to resolve this paradox and transform lives through the inclusion of people diagnosed with schizophrenia in research in decision making about their own treatment and housing and in public discourse about schizophrenia

**Schizophrenia and Its Treatment** Matthew M. Kurtz, 2016 This volume aims to explain why despite profound advances in psychological science and neuroscientific analyses of schizophrenia outcomes for the disorder have changed little over the past 100 years The book promotes the idea of individually tailored multimodal treatment for distinct disorder features that may or may not be present in individuals with the same diagnosis for improving outcome
