*Descent of Man and Selection in Relation to Sex* Charles Darwin, 2004 Excerpt from *The Descent of Man and Selection in Relation to Sex* The nature of the following work will be best understood by a brief account of how it came to be written During many years I collected notes on the origin or descent of man without any intention of publishing on the subject but rather with the determination not to publish as I thought that I should thus only add to the prejudices against my views It seemed to me sufficient to indicate in the first edition of my *Origin of Species* that by this work light would be thrown on the origin of man and his history and this implies that man must be included with other organic beings in any general conclusion respecting his manner of appearance on this earth Now the case wears a wholly different aspect When a naturalist like Carl Vogt ventures to say in his address as President of the National Institution of Geneva *personne en Europe au moins n'ose plus soutenir la création indépendante de toutes les espèces* it is manifest that at least a large number of naturalists must admit that species are the modified descendants of other species and this especially holds good with the younger and rising naturalists The greater number accept the agency of natural selection though some urge whether with justice the future must decide that I have greatly overrated its importance Of the older and honoured chiefs in natural science many unfortunately are still opposed to evolution in every form About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

[Sexual Selection and the Descent of Man](#) Bernard Campbell, 2017-07-12 Just over one hundred and thirty years ago Charles Darwin in *The Descent of Man and Selection in Relation to Sex* 1871 developed remarkably accurate conclusions about man's ancestry based on a review of general comparative anatomy and psychology in which he regarded sexual selection as a necessary part of the evolutionary process But the attention of biologists turned to the more general concept of natural selection in which sexual selection plays a complex role that has been little understood This volume significantly broadens the scope of modern evolutionary biology by looking at this important and long neglected concept of great importance In this book which is the first full discussion of sexual selection since 1871 leading biologists bring modern genetic theory and behavior observation to bear on the subject The distinguished authors consider many aspects of sexual selection in many species including man within the context of contemporary evolutionary theory and research The result is a remarkably original and well rounded view of the whole concept that will be invaluable especially to students of evolution and human sexual behavior The lucid authority of the contributors and the importance of the topic will interest all who share in man's perennial fascination with

his own history The book will be of central importance to a wide variety of professionals including biologists anthropologists and geneticists It will be an invaluable supplementary text for courses in vertebrate biology theory of evolution genetics and physical anthropology It is especially important with the emergence of alternative explanations of human development under the rubric of creationism and doctrines of intelligent design **The Descent of Man** Charles Darwin, 2019-09-25

Reproduction of the original The Descent of Man by Charles Darwin **The Descent of Man, and Selection in Relation to Sex** Charles Darwin, 1981 In the current resurgence of interest in the biological basis of animal behavior and social organization the ideas and questions pursued by Charles Darwin remain fresh and insightful This is especially true of The Descent of Man and Selection in Relation to Sex Darwin's second most important work This edition is a facsimile reprint of the first printing of the first edition 1871 not previously available in paperback The work is divided into two parts Part One marshals behavioral and morphological evidence to argue that humans evolved from other animals Darwin shows that human mental and emotional capacities far from making human beings unique are evidence of an animal origin and evolutionary development Part Two is an extended discussion of the differences between the sexes of many species and how they arose as a result of selection Here Darwin lays the foundation for much contemporary research by arguing that many characteristics of animals have evolved not in response to the selective pressures exerted by their physical and biological environment but rather to confer an advantage in sexual competition These two themes are drawn together in two final chapters on the role of sexual selection in humans In their Introduction Professors Bonner and May discuss the place of The Descent in its own time and relation to current work in biology and other disciplines **The Descent of Man**, Charles Darwin, 1888 The Descent of Man and Selection in Relation to Sex Charles Darwin, 2016-07-29 The Descent of Man and Selection in Relation to Sex is a book by English naturalist Charles Darwin first published in 1871 which applies evolutionary theory to human evolution and details his theory of sexual selection a form of biological adaptation distinct from yet interconnected with natural selection The book discusses many related issues including evolutionary psychology evolutionary ethics differences between human races differences between sexes the dominant role of women in mate choice and the relevance of the evolutionary theory to society **Sexual Selection And the Descent of Man** Bernard Grant Campbell, Just over one hundred and thirty years ago Charles Darwin in The Descent of Man and Selection in Relation to Sex 1871 developed remarkably accurate conclusions about man's ancestry based on a review of general comparative anatomy and psychology in which he regarded sexual selection as a necessary part of the evolutionary process But the attention of biologists turned to the more general concept of natural selection in which sexual selection plays a complex role that has been little understood This volume significantly broadens the scope of modern evolutionary biology by looking at this important and long neglected concept of great importance In this book which is the first full discussion of sexual selection since 1871 leading biologists bring modern genetic theory and behavior observation to bear on the subject The distinguished authors consider many

aspects of sexual selection in many species including man within the context of contemporary evolutionary theory and research The result is a remarkably original and well rounded view of the whole concept that will be invaluable especially to students of evolution and human sexual behavior The lucid authority of the contributors and the importance of the topic will interest all who share in man's perennial fascination with his own history The book will be of central importance to a wide variety of professionals including biologists anthropologists and geneticists It will be an invaluable supplementary text for courses in vertebrate biology theory of evolution genetics and physical anthropology It is especially important with the emergence of alternative explanations of human development under the rubric of creationism and doctrines of intelligent design Bernard G Campbell is professor of anthropology at the University of California Los Angeles Born in Weybridge England he received his Ph D from the University of Cambridge in 1957 and has been a lecturer in anthropology at Cambridge and Harvard Universities Among his many contributions to the field of anthropology is Human Evolution An Introduction to Man's Adaptations

**Sexual Selection and the Descent of Man** Bernard Grant Campbell, 1972-01 This volume significantly broadens the scope of modern evolutionary biology by looking at the important and long neglected concept of natural selection in which sexual selection plays a complex role that has been little understood and is of great importance In this classic book which was the first full discussion of sexual selection since 1871 leading biologists bring modern genetic theory and behavior observation to bear on this subject The distinguished authors consider many aspects of sexual selection in many species including man within the context of contemporary evolutionary theory and research

The Descent of Man Charles Darwin, 2016-01-04 The Descent of Man Selection in Relation to Sex Charles Darwin The Descent of Man and Selection in Relation to Sex is a book by English naturalist Charles Darwin first published in 1871 which applies evolutionary theory to human evolution and details his theory of sexual selection a form of biological adaptation distinct from yet interconnected with natural selection The book discusses many related issues including evolutionary psychology evolutionary ethics differences between human races differences between sexes the dominant role of women in mate choice and the relevance of the evolutionary theory to society THE NATURE of the following work will be best understood by a brief account of how it came to be written During many years I collected notes on the origin or descent of man without any intention of publishing on the subject but rather with the determination not to publish as I thought that I should thus only add to the prejudices against my views It seemed to me sufficient to indicate in the first edition of my Origin of Species that by this work light would be thrown on the origin of man and his history and this implies that man must be included with other organic beings in any general conclusion respecting his manner of appearance on this earth Now the case wears a wholly different aspect When a naturalist like Carl Vogt ventures to say in his address as President of the National Institution of Geneva 1869 personne en Europe au moins n ose plus soutenir la creation independante et de toutes pieces des especes it is manifest that at least a large number of naturalists must admit that species are the modified descendants of other species

and this especially holds good with the younger and rising naturalists The greater number accept the agency of natural selection though some urge whether with justice the future must decide that I have greatly overrated its importance Of the older and honoured chiefs in natural science many unfortunately are still opposed to evolution in every form Includes Principles of Sexual Selection Secondary Sexual Characters in the Lower Classes of the Animal Kingdom Secondary Sexual Characters of Insects Insects Continued Order Lepidoptera Secondary Sexual Characters of Fishes Amphibians and Reptiles Secondary Sexual Characters of Birds Birds Continued Birds Continued Birds Concluded Secondary Sexual Characters of Mammals Secondary Sexual Characters of Mammals Continued Plus more **The Descent of Man and Selection in**

Darwin,2004-06 In the discussion on Sexual Selection in my Descent of Man no case interested and perplexed me so much as the brightly coloured hinder ends and adjoining parts of certain monkeys As these parts are more brightly coloured in one sex than the other and as they become more brilliant during the season of love I concluded that the colours had been gained as a sexual attraction *The Descent of Man and Selection in Relation to Sex* Charles CHARLES DARWIN,2021-08-22 The

Descent of Man and Selection in Relation to Sex was originally published in 1871 and is a book written by evolutionary theorist Charles Darwin In it Darwin explores evolutionary theory and natural selection building upon his already well known ideas of evolution Specifically he delves into the relationship between sexual selection and society The book was generally well received at that time with a significant number of copies sold However Darwin s ideas were already well known and discussed in the scientific community by the time the book came out This resulted in a generally positive reception by the public and the scientific community but little surprise owing to the fact that there were no significantly new revelations

**The Descent of Man; and Selection in Relation to Sex Volume 1** Charles Darwin,2013-09 This historic book may have numerous typos and missing text Purchasers can usually download a free scanned copy of the original book without typos from the publisher Not indexed Not illustrated 1888 edition Excerpt SUPPLEMENTAL NOTE os SEXUAL SELECTION IN EELATION TO MONKEYS Reprinted from Natube November 2 1876 p 18 In the discussion on Sexual Selection in my Descent of Man no case interested and perplexed me so much as the brightly coloured hinder ends and adjoining parts of certain monkeys As these parts are more brightly coloured in one sex than the other and as they become more brilliant during the season of love I concluded that the colours had been gained as a sexual attraction I was well aware that I thus laid myself open to ridicule though in fact it is not more surprising that a monkey should display his bright red hinder end than that a peacock should display his magnificent tail I had however at that time no evidence of monkeys exhibiting this part of their bodies during their courtship and such display in the case of birds affords the best evidence that the ornaments of the males are of service to them by attracting or exciting the females I have lately read an article by Joh von Fischer of Gotha published in Der Zoologische Garten April 1876 on the expression of monkeys under various emotions which is well worthy of

study by any one interested in the subject and which shows that the author is a careful and acute observer In this article there is an account of the behaviour of a young male mandrill when he first beheld himself in a looking glass and it is added that after a time he turned round and presented his red hinder end to the glass Accordingly I wrote to Herr J von Fischer to ask what he supposed was the meaning of this strange action and he has sent me two long letters full of new and curious details which will I hope be hereafter published He says that he was himself at first perplexed

**The Descent of Man** Charles Darwin, Dragan Nikolic, 2014-11-16 Darwin wrote of the fiery ordeal through which this book has passed He had avoided the logical outcome of the general theory of evolution bringing man into the scheme for twelve years and in fact it had by that time been so much accepted that the clamor of the opposition was not strident He had also been preceded in 1863 by Huxley's Man's place in nature In this book word evolution occurs for the first time in any of Darwin's works The last chapter is about sexual selection in relation to man and it ends with the famous peroration about man's lowly origin the wording of which differs slightly in the first edition from that which is usually quoted In a letter dated March 28 1871 Emma Darwin Vol II pp 202 203 Darwin mentions the help that his daughter Henrietta Emma had given him in reading the manuscript and correcting the style and calls her my very dear coadjutor and fellow labourer
