Wolfram Elsner, Torsten Heinrich, Henning Schwardt, 2014-04-15 *The Microeconomics of Complex Economies* uses game theory modeling approaches formal techniques and computer simulations to teach useful accessible approaches to real modern economies It covers topics of information and innovation including national and regional systems of innovation clustered and networked firms and open source open innovation production and use Its final chapter on policy perspectives and decisions confirms the value of the toolset Written so chapters can be used independently the book includes an introduction to computer simulation and pedagogical supplements Its formal accessible treatment of complexity goes beyond the scopes of neoclassical and mainstream economics The highly interdependent economy of the 21st century demands a reconsideration of economic theories Describes the usefulness of complex heterodox economics Emphasizes divergences and convergences with neoclassical economic theories and perspectives Fits easily into courses on intermediate microeconomics industrial organization and games through self contained chapters *Introduction to Islamic Economics* Hossein Askari, Zamir Iqbal, Abbas Mirakhor, 2015-02-16 Gain deeper insight into the principles and theory of Islamic economics *Introduction to Islamic Economics Theory and Application* provides an overview of the organizing principles and fundamentals of an Islamic economy With deep discussion of the characteristics rationale key institutions objectives and instruments at work the book addresses the core economic principles underlying a system based on the foundational teachings of Islam and examines the implications for economic policies Social welfare economic justice market functionality efficiency and equity are explored from an Islamic perspective and the role and instruments of fiscal and monetary policy in Islamic systems are used to illustrate contemporary applications Universities around the globe are offering courses on Islamic economics and finance but despite the industry s rapid growth most research has been focused on the financial principles rather than underlying economic principles The first book of its kind *Introduction to Islamic Economics* brings all the key concepts together into one reference volume By outlining the ways in which Islamic finance and Islamic economics interrelate this book can help readers to Develop an understanding of the Islamic economic system and its institutional scaffolding Differentiate between the major characteristics of the dominant conventional economy and one based on the fundamental sources of Islam Understand the conditions that must be met for a just well balanced stable and growing economy Clarify the role of State public policy and risk sharing in the Islamic financial system The Islamic financial system is expanding quickly and those looking to increase their relevance in a changing economic landscape must get up to speed *Introduction to Islamic Economics* provides a comprehensive overview of underlying economic system offering a deeper understanding of the feature of the system This book is an excellent complement to *Introduction to Islamic Finance 2E* by Iqbal and Mirakhor *Sustainable Value Management-New Concepts and Contemporary Trends* Dariusz Zarzecki, Marek Jabłoński, 2020-12-29 Sustainable value management reveals a new space for studying business models The traditional approach is based on the assumption that the goal of any business is to make money All decisions regarding supply and

production should be made to maximize profit The discrepancy in creating non economic value is sometimes the result of separating ownership from control over an enterprise Although shareholders are interested in maximizing profit management that actually makes decisions can also pursue other goals In addition to economic aspects the management intentions of modern managers are also influenced by factors arising from the organizational culture built co created within the organization and sometimes with the participation of external actors such as suppliers and customers The sources of the creation of social values will be the management intentions of top management often initiated by the adopted values and rules on the basis of which resources are bound within the structure of the business model The value of sustainability is based on the identification of those creative sources that relate to economic and social value Economic value is created through social value and vice versa This allows the complementarity of the value created to be mutually supportive The business model that integrates both of these values should be more resistant to crises than the one that is oriented only toward producing economic value Concurrent implementation of economic and social goals increases resilience and affects the success of modern business models This is due to the specificity of the business ecosystem that is built as part of the business model which in essence is based on the use of social factors to merge the business model into a complex ecosystem capable of producing value
