Conducting Online Research on Amazon Mechanical Turk and Beyond Leib Litman, Jonathan Robinson, 2020-05-12 Conducting Online Research on

Amazon Mechanical Turk and Beyond written by Leib Litman and Jonathan Robinson provides both students and experienced researchers with essential information about the online platforms most often used for social science research. This insightful and accessible text answers common questions like How do I maintain data quality in online studies? What is the best way to recruit hard to reach samples and How can researchers navigate the ethical issues that are unique to online research? Drawing on their experiences as the founders of CloudResearch formerly TurkPrime, the authors provide information that guides new users planning their first online studies and engages even the most experienced researchers with detailed discussions about the challenges of online research. The book begins with an overview of Amazon's Mechanical Turk and its rapid rise within academic research. Then the authors describe how to set up an MTurk study with screenshots that walk readers through the steps of creating an account, designing a study, collecting data, and using third party applications to enhance MTurk's functionality. Later chapters provide readers with a detailed understanding of the MTurk environment and use data from hundreds of thousands of participants and tens of millions of completed tasks to dive into issues like participant demographics, sources of sampling bias, and the generalizability of findings from MTurk. Finally, the book explores the benefits of using other online platforms as a complement to MTurk and the ethical issues that are unique to conducting research with online participant platforms. Throughout the book, the authors share hands-on advice and best practices such as those for conducting longitudinal studies or carrying out complex studies. Altogether, the mix of data insight and advice makes this book an essential resource for researchers who want to understand the online environment and the most effective ways to conduct research online.

Longitudinal Research F. Schulsinger, Sarnoff A. Mednick, J. Knop, 2012-12-06. This volume is the product of a course on longitudinal prospective research arranged by the three editors in Aarhus, Denmark, in 1978. The course was supported by the Nordisk Kulturfond for young researchers from the Nordic countries who had planned or had simply involved themselves in longitudinal prospective research projects of various kinds. The twenty-six participants represented a wide range of professions: statisticians, psychologists, psychiatrists, nutritionists, and public health researchers. The teachers came from many countries and represented many disciplines. The course was very successful, especially from the point of view of the quality and investment of the teachers. We felt also that the course met a strong need in this relatively new field of research. Therefore, we asked the teachers to prepare written versions of their lectures so that they could have wider dissemination; they agreed to do so. The present book is composed of these contributions. The first chapter, after outlining some of the problems with traditional strategies in mental health research, goes on to suggest some of the possible preventive applications of longitudinal research methods. Included in Parts II and III are papers on design problems and on the tools of long-term research such as genetics and classification, biological measurements, epidemiological guidelines, statistical
