Organized Technology Networks And Innovation In Technical Systems:

Organized Technology Wesley Shrum, 1985 From the Manhattan Project to the space shuttle government organized technological enterprises have proven to be vital resources Their very size and complexity makes unprecedented demands on the organizational abilities of managers Understanding them is a major challenge for social scientists Organized Technology is a first step in meeting this challenge The book is based on an intensive study of radioactive waste and solar cell research two large scale technical systems important to U S energy policy Historical and organizational analyses are combined with results from interviews with a national sample of scientists engineers managers policymakers and public interest advocates in a new approach to technology analysis that examines the interaction of government agencies national laboratories private firms universities regulatory agencies Congress and public interest groups in the technology development process

Handbook of Quantitative Studies of Science and Technology A.F.J. van Raan, 2013-10-22 Quantitative studies of science and technology represent the research field of utilization of mathematical statistical and data analytical methods and techniques for gathering handling interpreting and predicting a variety of features of the science and technology enterprise such as performance development and dynamics The field has both strongly developed applied research as well as basic research characteristics The principal purpose of this handbook is to present this wide range of topics in sufficient depth to give readers a reasonably systematic understanding of the domain of contemporary quantitative studies of science and technology a domain which incorporates theory methods and techniques and applications In addressing this domain the handbook aims at different groups of readers those conducting research in the field of science and technology including graduate students and those who are to use results of the work presented in this book **Insight and Industry** Stuart S.

Blume, 1992 Insight and Industry examines the careers of four major technologies that have reshaped medicine by allowing new forms of insight into the human interior Blume's studies of ultrasound thermography computerized tomography and nuclear magnetic resonance reveal the many ways in which manufacturers medical personnel and patients affect both the form and the use of innovative technologies *Structures of Scientific Collaboration* Wesley Shrum, Joel Genuth, Ivan

Chompalov, 2007 How technology and bureaucracy shape collaborative scientific research projects an empirical study of multiorganizational collaboration in the physical sciences Collaboration among organizations is rapidly becoming common in scientific research as globalization and new communication technologies make it possible for researchers from different locations and institutions to work together on common projects These scientific and technological collaborations are part of a general trend toward more fluid flexible and temporary organizational arrangements but they have received very limited scholarly attention Structures of Scientific Collaboration is the first study to examine multi organizational collaboration systematically drawing on a database of 53 collaborations documented for the Center for History of Physics of the American Institute of Physics By integrating quantitative sociological analyses with detailed case histories Shrum Genuth and

Chompalov pioneer a new and truly interdisciplinary method for the study of science and technology Scientists undertake multi organizational collaborations because individual institutions often lack sufficient resources including the latest technology to achieve a given research objective The authors find that collaborative research depends on both technology and bureaucracy scientists claim to abhor bureaucracy but most collaborations use it constructively to achieve their goals The book analyzes the structural elements of collaboration among them formation size and duration organization technological practices and participant experiences and the relationships among them The authors find that trust though viewed as positive is not necessarily associated with successful projects indeed the formal structures of bureaucracy reduce the need for high levels of trust and make possible the independence so valued by participating scientists The Challenge of Scientometrics Loet Leydesdorff,2001 Scientometrics the quantitative study of scientific communication challenges science and technology studies by demonstrating that organized knowledge production and control is amenable to measurement First the various dimensions of the empirical study of the sciences are clarified in a methodological analysis of theoretical traditions including the sociology of scientific knowledge and neo conventionalism in the philosophy of science Second the author argues why the mathematical theory of communication enables us to address crucial problems in science and technology studies both on the qualitative side e g the significance of a reconstruction and on the quantitative side e g the prediction of indicators A comprehensive set of probabilistic entropy measures for studying complex developments in networks is elaborated In the third part of the study applications to S T policy questions e g the emergence of a European R D system to problems of Bayesian knowledge representations and to the study of the sciences in terms of self organizing paradigms of scientific communication are provided A discussion of directions for further research concludes the study

Bowman,2023-09-22 This book uses comparative case study methodology and

extensive field work to examine and compare outcomes of four East African nations Kenya Tanzania Uganda and Rwanda that implemented formal Information and Communications Technology policies in the 1990s Based on extensive fieldwork the book assesses the emergence of a new policy and technological arena from the turn of the millennium to the present In addition to tracing the implementation and reception of these policies Bowman considers to what extent the politics of infrastructure in four connected but distinct African nations have resulted in global participation and equitable distribution and access of infrastructure to all citizens as well as the impact a recent history of war or peace have on the technological outcomes in these communities The book provides us with invaluable new data on how policy and politics function in emerging democracies and illuminates long overlooked opportunities and conditions necessary for the distribution of new and potentially beneficial technologies in other developing countries

The Arguments of Agriculture Jan Wojcik,1989

The Arguments of Agriculture presents the major issues questions and conflicting opinions of influential policymakers and critics concerning the role and future of modern agriculture Today while modern farm tools and chemicals take huge and unprecedented yields from those fields they often cause an equally unprecedented loss of topsoil Increased productivity has reduced the farming population drastically and economic realities force many small farms out of business A growing international market for food and fiber puts mounting pressure on farmers all over the world even in traditional cultures to use ever more sophisticated techniques to push their productivity higher with new risks Under this kind of pressure the basic question about farming splits into several ones There is a multitude of contradictory answers The author urges the reader to weigh and consider all positions and supplies a primer in the basic arguments of agriculture Each chapter begins with a series of hypothetical cases that illustrate the range of theoretical issues discussed in the chapter The next section analyzes the basic issues and the section entitled Review summarizes and contrasts the opinions of a number of prominent critics Each chapter concludes with a list of recommended readings

Of Bicycles, Bakelites, and Bulbs

Wiebe E. Bijker,1997-01-03 This book crystallizes and extends the important work Wiebe Bijker has done in the last decade to found a full scale theory of sociotechnical change that describes where technologies come from and how societies deal with them Of Bicycles Bakelites and Bulbs integrates detailed case studies with theoretical generalizations and political analyses to offer a fully rounded treatment both of the relations between technology and society and of the issues involved in sociotechnical change The stories of the the safety bicycle the first truly synthetic plastic and the fluorescent light bulb each a fascinating case study in itself reflect a cross section of time periods engineering and scientific disciplines and economic

social and political cultures The bicycle story explores such issues as the role of changing gender relationships in shaping a technology the Bakelite story examines the ways in which social factors intrude even in cases of seemingly pure chemistry and entrepreneurship and the fluorescent bulb story offers insights into the ways in which political and economic relationships can affect the form of a technology Bijker's method is to use these case studies to suggest theoretical concepts that serve as building blocks in a more and more inclusive theory which is then tested against further case studies His main concern is to create a basis for science technology and social change that uncovers the social roots of technology making it amenable to democratic politics

Information Society and Civil Society Slavko Splichal, Andrew Calabrese, Colin Sparks, 1994 A number of authors including several contributors to this collection argue that on the eve of the 21st century civil society is beginning to disintegrate everywhere In this volume fifteen scholars from ten different countries address that argument by problematizing the relation between the older concept civil society and the newer one information society and offering perspectives on future directions

Technological Concepts and Mathematical Models in the Evolution of Modern Engineering Systems Mario Lucertini, Ana Millàn Gasca, Fernando Nicolò, 2012-12-06 M LUCERTINI A MILLAN GASCA AND F NICOLÒ 1 Technology as Knowledge The Case of Modern Engineering Systems In recent years scholars coming from the fields of history and philosophy of science and technology have devoted much attention to the problem of technology as knowledge and to the emergence of an autonomous engineering science in the Industrial Age This interest echoes a growing awareness among engineers of the independence of their conceptual approach with respect to other forms of knowledge linked to the consolidation of autonomous academic engineering research in the 20th century A careful examination of the nature of technological knowledge appears particularly valuable in view of the pervasive presence of technology in contemporary life and culture not only as a result of its impressive achievements but through the less obvious influence of its concepts and viewpoints as well The activity of engineers and technicians has been traditionally based on the practical ability to cope with specific situations and to attain the corresponding specific goal by means of the design and realization of an artifact or structure on the basis of past experience handed down by tradition and applied by means of trial and error and rule of thumb procedures But the existence of a theoretical background and of principles underpinning this activity can be traced back to classical antiquity
