Walker, 2014-07-10 Late Quaternary Environmental Change addresses the interaction between human agency and other environmental factors in the landscapes particularly of the temperate zone Taking an ecological approach the authors cover the last 20 000 years during which the climate has shifted from arctic severity to the conditions of the present interglacial environment Micropalaeontology, Sedimentary Environments and Stratigraphy J. E. Whittaker, M. B.

Hart, 2010 Dennis Curry was a remarkable polymath and philanthropist leading a double life as one of the UK's most gifted amateur geologists whilst at the same time being an extremely successful businessman as Managing Director of Currys Ltd This Festschrift authored by friends and specialists from Britain and France pays tribute to his often seminal research as well as exhibiting the wide range of his geological interest It contains 12 chapters and covers several differing aspects of micropalaeontology pteropods diatoms and especially foraminifera Strontium Isotope Stratigraphy Hampshire Basin stratigraphy and palaeogeography as well as major contributions on English Channel sedimentology and the great faunal turnover affecting mammals at the Eocene Oligocene boundary A scientific appreciation of Dennis Curry the professional amateur with recollections of former colleagues at University College London where he was Visiting Professor together with an assessment of the valuable collections he established and donated to The Natural History Museum are also included

studies and examines topics such as diet economy climate environmental and land use isotopes and mollusks as artifacts It aims to provide archaeologists and students with the first port of call giving them a methods and principles and b the potential information mollusks can provide It concentrates on analysis and interpretation most archaeologists and students can undertake and understand and to review the heavier science in terms of potential application and interpretational value

Proxies in Late Cenozoic Paleoceanography C. Hillaire-Marcel, Anne de Vernal, 2007-05-25 The present volume is the first in a series of two books dedicated to the paleoceanography of the Late Cenozoic ocean The need for an updated synthesis on paleoceanographic science is urgent owing to the huge and very diversified progress made in this domain during the last decade In addition no comprehensive monography still exists in this domain This is quite incomprehensible in view of the contribution of paleoceanographic research to our present understanding of the dynamics of the climate ocean system The focus on the Late Cenozoic ocean responds to two constraints Firstly most quantitative methods notably those based on micropaleontological approaches cannot be used back in time beyond a few million years at most Secondly the last few million years with their strong climate oscillations show specific high frequency changes of the ocean with a relatively reduced influence of tectonics The first volume addresses quantitative methodologies to reconstruct the dynamics of the ocean and the second major aspects of the ocean system thermohaline circulation carbon cycle productivity sea level etc and will also present regional synthesis about the paleoceanography of major the oceanic basins In both cases the focus is the open ocean leaving aside nearshore processes that depend too much on local conditions In this first volume we have gathered up to date methodologies for the measurement and quantitative interpretation of tracers and proxies in deep sea sediments that allow reconstruction of a few key past properties of the ocean temperature salinity sea ice cover seasonal gradients pH ventilation oceanic currents thermohaline circulation and paleoproductivity Chapters encompass physical methods conventional grain size studies tomography magnetic and mineralogical properties most current biological proxies planktic and benthic foraminifers deep sea corals diatoms coccoliths dinocysts and biomarkers and key geochemical tracers trace elements stable isotopes radiogenic isotopes and U series Contributors to the book and members of the review panel are among the best scientists in their specialty They represent major European and North American laboratories and thus provide a priori guarantees to the quality and update of the entire book Scientists and graduate students in paleoclimatology paleoceanography climate modeling and undergraduate and graduate students in marine geology represent the target audience This volume should be of interest for scientists involved in several international programs such as those linked to the IPCC IODP Integrated Ocean Drilling Program PAGES Past Global Changes IMAGES Marine Global Changes PMIP Paleoclimate Intercomparison Project several IGCP projects etc That is all programs that require access to time series illustrating changes in the climate ocean system Presents updated techniques and methods in paleoceanography Reviews the state of the art interpretation of proxies used for quantitative reconstruction of the climate ocean system Acts as a

supplement for undergraduate and graduate courses in paleoceanography and marine geology **Applications of**

Paleoenvironmental Techniques in Estuarine Studies Kaarina Weckström, Krystyna M. Saunders, Peter A. Gell, C.

Gregory Skilbeck, 2017-02-13 The aim of this edited volume is to introduce the scientific community to paleoenvironmental studies of estuaries to highlight the types of information that can be obtained from such studies and to promote the use of paleoenvironmental studies in estuarine management Readers will learn about the the application of different paleoecological approaches used in estuaries that develop our understanding of their response to natural and human influences Particular attention is given to the essential steps required for undertaking a paleoecological study in particular with regard to site selection core extraction and chronological techniques followed by the range of indicators that can be used A series of case studies are discussed in the book to demonstrate how paleoecological studies can be used to address key questions and to sustainably manage these important coastal environments in the future This book will appeal to professional scientists interested in estuarine studies and or paleoenvironmental research as well as estuarine managers who are interested in the incorporation of paleoenvironmental research into their management programs The Holocene Neil

Roberts, 2014-02-03 The Holocene provides students researchers and lay readers with the remarkable story of how the natural world has been transformed since the end of the last Ice Age around 15 000 years ago This period has witnessed a shift from environmental changes determined by natural forces to those dominated by human actions including those of climate and greenhouse gases Understanding the environmental changes both natural and anthropogenic that have occurred during the Holocene is of crucial importance if we are to achieve a sustainable environmental future Revised and updated to take full account of the most recent advances the third edition of this classic text includes substantial material on the scientific methods that are used to reconstruct and date past environments as well as new concepts such as the Anthropocene The book is fully illustrated global in coverage and contains case studies a glossary and more than 500 new references *Coastal Systems* Simon K. Haslett, 2016-07-20 Coastal Systems offers a concise introduction to the processes landforms ecosystems and management of this important global environment Each chapter is illustrated and furnished with topical case studies from around the world Introductory chapters establish the importance of coasts and explain how they are studied within a systems framework subsequent chapters explore the role of waves tides rivers and sea level change in coastal evolution Students will benefit from summary points themed boxes engaging discussion questions and graded annotated guides to further reading at the end of each chapter Additionally a comprehensive glossary of technical terms a new list of associated videos made by the author and an extensive bibliography are provided The comprehensive balance of illustrations and academic thought provides a well balanced view between the role of coastal catastrophes and gradual processes also examining the impact humans and society have and continue to have on the coastal environment **Coastal**

Systems Simon Haslett, 2008-09-05 The coast represents the crossroads between the oceans land and atmosphere this book

offers an introduction to the processes and management of this global environment Each chapter is seminal and succinct illustrated and furnished with topical case studies from around the world *Environmental Micropaleontology* Ronald E. Martin, 2012-12-06 Microfossils are ideally suited to environmental studies because their short generation times allow them to respond rapidly to environmental change This book represents an assessment of the progress made in environmental micropalaeontology and sets out future research directions The taxa studied are mainly foraminifera but include arcellaceans diatoms dinoflagellates and ostracodes The papers themselves range from reviews of applications of particular taxa to specific case studies *Salt Marshes* Duncan M. FitzGerald, Zoe J. Hughes, 2021-04-22 Salt marshes are highly dynamic and important ecosystems that dampen impacts of coastal storms and are an integral part of tidal wetland systems which sequester half of all global marine carbon They are now being threatened due to sea level rise decreased sediment influx and human encroachment This book provides a comprehensive review of the latest salt marsh science investigating their functions and how they are responding to stresses through formation of salt pannes and pools headward erosion of tidal creeks marsh edge erosion ice fracturing and ice rafted sedimentation Written by experts in marsh ecology coastal geomorphology wetland biology estuarine hydrodynamics and coastal sedimentation it provides a multidisciplinary summary of recent advancements in our knowledge of salt marshes The future of wetlands and potential deterioration of salt marshes is also considered providing a go to reference for graduate students and researchers studying these coastal systems as well as marsh managers and restoration scientists **Microfossils** Howard Armstrong, Martin Brasier, 2013-05-21 This is a new and completely rewritten edition of the well known text Microfossils first published in 1980 covering all the major microfossil groups with information on taxonomy phylogeny ecology and palaeoecology particular attention is given to the uses of microfossils in environmental reconstruction and biostratigraphy numerous line and half tone illustrations emphasis on practical applications of micropalaeontology only student friendly micropaleontology text available **Ecology of Harmful Algae** E. Granéli, Jefferson T. Turner, 2007-10-04 Harmful algal can cause a variety of deleterious effects including the poisoning of fish and shellfish habitat disruptions for many organisms water discoloration beach fouling and even toxic effects for humans In this volume international experts provide an in depth analysis of harmful algae topics and offer a comprehensive synthesis of the latest research in the field **Marine Ecosystems** Antonio Cruzado, 2012-03-02 Marine ecosystems a very wide topic includes many different processes groups of organisms and geographical peculiarities The objective of this book is to present various topics of great importance for understanding the marine ecosystems what they are how they work and how we can model them in order to forecast their behaviour under changing conditions They have been thoroughly reviewed and accepted for publication The chapters cover aspects such as Threats to ultraoligotrophic marine ecosystems Ch 1 Modelling the pelagic ecosystem dynamics the NW Mediterranean Ch 2 The marine ecosystem of the Sub antarctic Prince Edward Islands Ch 3 Meiofauna as a tool for marine ecosystem biomonitoring Ch 4 Chemical interactions in

Antarctic marine benthic ecosystems Ch 5 An Interdisciplinary Approach on Erosion Mitigation for Coral Reef Protection A Case Study from the Eastern Caribbean Ch 6 A revisit to the evolution and ecophysiology of the *Labyrinthulomycetes* Ch 7 Seabed mapping and marine spatial planning a case study from a Swedish marine protected area Ch 8 Management strategies to limit the impact of bottom trawling on VMEs in the High Seas of the SW Atlantic Ch 9 Hydrocarbon contamination and the swimming behavior of the estuarine copepod *Eurytemora affinis* Ch 10 and Interactions between marine ecosystems and tourism on the Adriatic and Mediterranean Ch 11
