Computer Science -- Theory and Applications Lev D. Beklemishev, Daniil V. Musatov, 2015-06-22 This book constitutes the proceedings of the 10th International Computer Science Symposium in Russia CSR 2015 held in Listvyanka Russia in July 2015 The 25 full papers presented in this volume were carefully reviewed and selected from 61 submissions In addition the book contains 4 invited lectures The scope of the proposed topics is quite broad and covers a wide range of areas in theoretical computer science and its applications Bounded Queries in Recursion Theory William S. Levine, Georgia Martin, 1998-12-23 One of the major concerns of theoretical computer science is the classification of problems in terms of how hard they are The natural measure of difficulty of a function is the amount of time needed to compute it as a function of the length of the input Other resources such as space have also been considered In recursion theory by contrast a function is considered to be easy to compute if there exists some algorithm that computes it We wish to classify functions that are hard i e not computable in a quantitative way We cannot use time or space since the functions are not even computable We cannot use Turing degree since this notion is not quantitative Hence we need a new notion of complexity much like time or space that is quantitative and yet in some way captures the level of difficulty such as the Turing degree of a function *Mental Health Research Institute Staff Publications* University of Michigan.
