Quest For Longitude The Cb:

Nineteenth-century Longitude Determinations in the Great Lakes Region Patricia S. Whitesell, 2000 , *Celestial Shadows* John Westfall, William Sheehan, 2014-11-19 Much of what is known about the universe came from the study of celestial shadows This book looks in detail at the way eclipses and other celestial shadows have given us amazing insights into the nature of the objects in our solar system and how they are even helping us discover and analyze planets that orbit stars other than our Sun A variety of eclipses transits and occultations of the moons of Jupiter and Saturn Pluto and its satellite Charon asteroids and stars have helped astronomers to work out their dimensions structures and shapes even the existence of atmospheres and structures of exoplanets Long before Columbus set out to reach the Far East by sailing West the curved shadow of the Earth on the Moon during a lunar eclipse revealed that we inhabit a round world a globe More recently comparisons of the sunlit and Earthlit parts of the Moon have been used to determine changes in the Earth's brightness as a way of monitoring possible effects in cloud coverage which may be related to global warming Shadows were used by the Greek mathematician Eratosthenes to work out the first estimate of the circumference of the Earth by Galileo to measure the heights of the lunar mountains and by eighteenth century astronomers to determine the scale of the Solar System itself Some of the rarest and most wonderful shadows of all are those cast onto Earth by the lovely Evening Star Venus as it goes between the Earth and the Sun These majestic transits of Venus occur at most two in a century after the 2012 transit there is not a chance to observe this phenomenon until 2117 while the more common sweep of a total solar eclipse creates one of the most dramatic and awe inspiring events of nature Though it may have once been a source of consternation or dread solar eclipses now lead thousands of amateur astronomers and eclipse chasers to travel the globe in order to experience the dramatic view under totality These phenomena are among the most spectacular available to observers and are given their full due in Westfall and Sheehan's comprehensive study *The Mathematical Correspondent* George Baron, 1804 **Time for Science Education** Michael R. Matthews, 2000-10-31 The book demonstrates the importance of history and philosophy of science for science education It provides a case study of the pendulum showing the pivotal role played by the pendulum in the Scientific Revolution It describes how the pendulum enabled the creation of accurate clocks that among other things enabled the long standing problem of longitude to be solved The book charts how the solution of the longitude problem was of enormous social economic and cultural significance for European and consequently world history Further the book shows how the discovery of the laws of pendulum motion by Galileo Huygens and Newton hinged on the acceptance of a new methodology for science The pendulum laws are a window through which to view the fascinating mixture of experiment mathematics and philosophy that characterized the foundations of modern science the Galilean Newtonian paradigm and distinguished it from Aristotelian medieval and commonsense science The book covers learning about the nature of science navigation and the longitude problem ancient and medieval timekeeping Galileo's analysis

of pendulum motion Huygens Hooke Newton and the pendulum clocks and culture science and philosophy the mechanical world view teaching about time and pendulum motion and teacher education and culture The book defends a liberal or contextual approach to the teaching of science It shows how understanding the scientific philosophical and cultural contexts and ramifications of the pendulum laws can allow teachers to plan more engaging lessons and conduct informative historical investigative experiments Students can re live history Contextual understanding of the pendulum allows connections to be made with other parts of the science curriculum and with other subject areas such as geography literature religion music and mathematics Readers will come away with a deeper understanding of the nature of science and its *Solar and lunar eclipses* J.H. Coffin, Solar and lunar eclipses familiarly illustrated and explained with the method of calculating them according to the theory of astronomy as taught in New England colleges "The main Business of natural Philosophy" Steffen Ducheyne, 2011-10-20 In this monograph Steffen Ducheyne provides a historically detailed and systematically rich explication of Newton's methodology Throughout the pages of this book it will be shown that Newton developed a complex natural philosophical methodology which encompasses procedures to minimize inductive risk during the process of theory formation and which thereby surpasses a standard hypothetico deductive methodological setting Accordingly it will be highlighted that the so called Newtonian Revolution was not restricted to the empirical and theoretical dimensions of science but applied equally to the methodological dimension of science Furthermore it will be documented that Newton's methodology was far from static and that it developed alongside with his scientific work Attention will be paid not only to the successes of Newton's innovative methodology but equally to its tensions and limitations Based on a thorough study of Newton's extant manuscripts this monograph will address and contextualize inter alia Newton's causal realism his views on action at a distance and space and time the status of efficient causation in the Principia the different phases of his methodology his treatment of force and the constituents of the physico mathematical models in the context of Book I of the Principia the analytic part of the argument for universal gravitation the meaning and significance of his regulae philosophandi the methodological differences between his mechanical and optical work and finally the interplay between Newton's theology and his natural philosophy **The Mathematical Correspondent**, 1804 **Solar and Lunar Eclipses Familiarly Illustrated and Explained** James Henry Coffin, 1845 The Elements of Navigation; John Robertson, 1786

Making 20th Century Science Stephen G. Brush, Ariel Segal, 2015 Historically the scientific method has been said to require proposing a theory making a prediction of something not already known testing the prediction and giving up the theory or substantially changing it if it fails the test A theory that leads to several successful predictions is more likely to be accepted than one that only explains what is already known but not understood This process is widely treated as the conventional method of achieving scientific progress and was used throughout the twentieth century as the standard route to discovery and experimentation But does science really work this way In *Making 20th Century Science* Stephen G Brush

discusses this question as it relates to the development of science throughout the last century Answering this question requires both a philosophically and historically scientific approach and Brush blends the two in order to take a close look at how scientific methodology has developed Several cases from the history of modern physical and biological science are examined including Mendeleev's Periodic Law Kekule's structure for benzene the light quantum hypothesis quantum mechanics chromosome theory and natural selection In general it is found that theories are accepted for a combination of successful predictions and better explanations of old facts Making 20th Century Science is a large scale historical look at the implementation of the scientific method and how scientific theories come to be accepted The Gentleman's Diary ,1748
