The Science of Everyday Life Len Fisher, 2011-05-01 Scientists are in the business of trying to understand the world Exploring commonplace phenomena

they have uncovered some of nature's deepest laws. We can in turn apply these laws to our own lives to better grasp and enhance our performance in daily activities as varied as cooking, home improvement, sports, even dunking a doughnut. This book makes the science of the familiar a key to opening the door for those who want to know what scientists do, why they do it, and how they go about it. Following the routine of a normal day from coffee and breakfast to shopping, household chores, sports, a drink, supper, and a bath, we see how the seemingly mundane can provide insight into the most profound scientific questions. Some of the topics included are the art and science of dunking, how to boil an egg, how to tally a supermarket bill, the science behind hand tools, catching a ball, or throwing a boomerang, the secrets of haute cuisine, bath or beer foam, and the physics of sex. Fisher writes with great authority and a light touch, giving us an entertaining and accessible look at the science behind our daily activities.

Mind in Everyday Life and Cognitive Science Sunny Y. Auyang, 2001-03-15 Sunny Auyang tackles what she calls the large pictures of the human mind, exploring the relevance of cognitive science findings to everyday mental life. Auyang proposes a model of an open mind emerging from the self-organization of infrastructures, which she opposes to prevalent models that treat mind as a disembodied brain or computer subject to the control of external agents such as neuroscientists and programmers. Although cognitive science has obtained abundant data on neural and computational processes, it barely explains such ordinary experiences as recognizing faces, feeling pain, or remembering the past. In this book, Sunny Auyang tackles what she calls the large pictures of the human mind, exploring the relevance of cognitive science findings to everyday mental life. Auyang proposes a model of an open mind emerging from the self-organization of infrastructures, which she opposes to prevalent models that treat mind as a disembodied brain or computer subject to the control of external agents such as neuroscientists and programmers. Her model consists of three parts: 1. the open mind of our conscious life, 2. mind's infrastructure, the unconscious processes studied by cognitive science, and 3. emergence, the relation between the open mind and its infrastructure. At the heart of Auyang's model is the mind that opens to the world and makes it intelligible. A person with an open mind feels, thinks, recognizes, believes, doubts, anticipates, fears, speaks, and listens, and is aware of I together with it, and thou. Cognitive scientists refer to the binding problem, the question of how myriad unconscious processes combine into the unity of consciousness. Auyang approaches the problem from the other end, by starting with everyday experience rather than with the mental infrastructure. In so doing, she shows both how analyses of experiences can help to advance cognitive science and how cognitive science can help us to understand ourselves as autonomous subjects.

Equity, Exclusion and Everyday Science Learning Emily Dawson, 2019-02-01 Equity, Exclusion, and Everyday Science Learning explores how some people are excluded from science education and communication. Taking the role of science in society as a starting point, it critically examines the concept of equity in science learning and develops a framework to support inclusive change. This book presents a theoretically informed, empirically detailed analysis of how people from minoritized groups in the UK experience

science and everyday science learning resources in their daily lives The book draws on two years of ethnographic research carried out in London with five community groups who identified as Asian Somali Afro Caribbean Latin American and Sierra Leonean Exploring their experiences of everyday science learning from a sociological perspective with social justice as a guiding concern this book opens with a theory of exclusion and closes with a theory of inclusion Equity Exclusion and Everyday Science Learning is not only an essential text for postgraduate students and postdoctoral researchers of Science Education Science Communication and Museum Studies but for any professional working in museums science centres and institutional public engagement

Everyday Matters in Science and Mathematics Ricardo Nemirovsky, Ann S. Rosebery, Jesse Solomon, Beth Warren, 2004-12-13 This book re-examines the dichotomy between the everyday and the disciplinary in mathematics and science education and explores alternatives to this opposition from points of view grounded in the close examination of complex classroom events It makes the case that students' everyday experience and knowledge in their entire manifold forms matter crucially in learning sciences and mathematics The contributions of 13 research teams are organized around three themes 1 the experiences of students in encounters with everyday matters of a discipline 2 the concerns of curriculum designers including teachers as they design activities intended to focus on everyday matters of a discipline and 3 the actions of teachers as they create classroom encounters with everyday matters of a discipline As a whole the volume reflects the shift in the field of educational research in recent years away from formal structural models of learning toward emphasizing its situated nature and the sociocultural bases of teaching and learning At least two trends increasing awareness that formal theories can be useful guides but are always partial and provisional in how they disclose classroom experiences and the widespread availability of video and audio equipment that enables effortless recording of classroom interactions have reoriented the field by allowing researchers and teachers to look at learning starting with complex classroom events rather than formal theories of learning Such examinations are not meant to replace the work on general theoretical frameworks but to ground them in actual complex events This reorientation means that researchers and teachers can now encounter the complexity of learning and teaching as lived human meaning-making experiences Immersion in this complexity compels rethinking assumptions about the dichotomies that have traditionally organized the field's thinking about learning Further it has important implications for how the relationship between theory and practice in understanding teaching and learning is viewed *Everyday Matters in Science and Mathematics Studies of Complex Classroom Events* is an important resource for researchers teacher educators and graduate students in mathematics and science education and a strong supplemental text for courses in these areas and also in cognition and instruction and instructional design
