This book covers the important requirements of teaching databases with a practical and progressive perspective This book
offers the straightforward practical answers you need to help you do your job This hands on tutorial reference guide to
MySQL and SQLite is not only perfect for students and beginners but it also works for experienced developers who aren't
getting the most from both databases In designing a GUI and as an IDE you will make use Qt Designer In the first chapter
you will learn to use several widgets in PyQt5 Display a welcome message Use the Radio Button widget Grouping radio
buttons Displays options in the form of a check box and Display two groups of check boxes In chapter two you will learn to
use the following topics Using Signal Slot Editor Copy and place text from one Line Edit widget to another Convert data
types and make a simple calculator Use the Spin Box widget Use scrollbars and sliders Using the Widget List Select a
number of list items from one Widget List and display them on another Widget List widget Add items to the Widget List
Perform operations on the Widget List Use the Combo Box widget Displays data selected by the user from the Calendar
Widget Creating a hotel reservation application and Display tabular data using Table Widgets In chapter three you will learn
How to create the initial three tables project in the School database Teacher Class and Subject tables How to create database
configuration files How to create a Python GUI for inserting and editing tables How to create a Python GUI to join and query
the three tables In chapter four you will learn how to Create a main form to connect all forms Create a project will add three
more tables to the school database Student Parent and Tuition tables Create a Python GUI for inserting and editing tables
Create a Python GUI to join and query over the three tables In chapter five you will join the six classes Teacher TClass
Subject Student Parent and Tuition and make queries over those tables In chapter six you will create and configure database
In this chapter you will create Suspect table in crime database This table has eleven columns suspect_id primary key
suspect_name birth_date case_date report_date suspect_status arrest_date mother_name address telephone and photo You
will also create GUI to display edit insert and delete for this table In chapter seven you will create a table with the name
Feature_Extraction which has eight columns feature_id primary key suspect_id foreign key feature1 feature2 feature3
feature4 feature5 and feature6 The six fields except keys will have VARBINARY MAX data type You will also create GUI to
display edit insert and delete for this table In chapter eight you will create two tables Police and Investigator The Police table
has six columns police_id primary key province city address telephone and photo The Investigator table has eight columns

investigator_id primary key investigator_name rank birth_date gender address telephone and photo You will also create GUI to display edit insert and delete for both tables In the last chapter you will create two tables Victim and Case_File The Victim table has nine columns victim_id primary key victim_name crime_type birth_date crime_date gender address telephone and photo The Case_File table has seven columns case_file_id primary key suspect_id foreign key police_id foreign key investigator_id foreign key victim_id foreign key status and description You will create GUI to display edit insert and delete for both tables

IBM IMS Solutions for Automating Database Management Paolo Bruni,Rafael Henrique Vedovatto Bindillati,James Kelly,Rick Long,Acacio Ricardo Gomes Pessoa,IBM Redbooks,2014-12-09 Over the last few years IBM IMSTM and IMS tools have been modernizing the interfaces to IMS and the IMS tools to bring them more in line with the current interface designs As the mainframe software products are becoming more integrated with the Windows and mobile environments a common approach to interfaces is becoming more relevant The traditional 3270 interface with ISPF as the main interface is no longer the only way to do some of these processes There is also a need to provide more of a common looking interface so the tools do not have a product specific interface This allows more cross product integration Eclipse and web based interfaces being used in a development environment tooling using those environments provides productivity improvements in that the interfaces are common and familiar IMS and IMS tools developers are making use of those environments to provide tooling that will perform some of the standard DBA functions This book will take some selected processes and show how this new tooling can be used This will provide some productivity improvements and also provide a more familiar environment for new generations DBAs Some of the functions normally done by DBA or console operators can now be done in this eclipse based environment by the application developers This means that the need to request these services from others can be eliminated This IBM Redbooks publication examines specific IMS DBA processes and highlights the new IMS and IMS tools features which show an alternative way to accomplish those processes Each chapter highlights a different area of the DBA processes like PSB creation Starting stopping a database in an IMS system Recovering a database Cloning a set of databases
