Sacred Beetle And Other Great Essays In Science:

The Sacred Beetle and Other Great Essays in Science Martin Gardner, 1985
Gardner, 1957 **The Magic Numbers of Dr. Matrix** Martin Gardner, 2020-10-06 Martin Gardner's Mathematical Games columns in Scientific American inspired and entertained several generations of mathematicians and scientists Gardner in his crystal clear prose illuminated corners of mathematics especially recreational mathematics that most people had no idea existed His playful spirit and inquisitive nature invite the reader into an exploration of beautiful mathematical ideas along with him These columns were both a revelation and a gift when he wrote them no one before Gardner had written about mathematics like this They continue to be a marvel This volume is a collection of Irving Joshua Matrix columns published in the magazine from 1960-1980 There were several collections of Dr Matrix the first in 1967 they were revised as Gardner reconnected with the good doctor over the years This is the 1985 Prometheus Books edition and contains all the Dr Matrix columns from the magazine *The Many Faces Of Science* Henry Byerly, 2018-03-05 In *The Many Faces of Science* Leslie Stevenson and Henry Byerly masterfully and painlessly provide the information and the philosophical reflections students need to gain an understanding of the institution of modern science and its increasing impact on our lives and cultures In this second edition the authors update topics they explored in the first edition and present new case studies on subjects such as HIV and AIDS women in science and work done in psychology and the social sciences The authors also extend their discussion of science and values in addition to revising their study of science and technology to emphasize changes in scientific practice today Accessible and rich with case studies anecdotes personal asides and keen insight *The Many Faces of Science* is the ideal interdisciplinary introduction for nonscientists and scientists in courses on science studies science and society and science and human values It will also prove useful as supplementary reading in courses on science and philosophy sociology and political science **Science and the Search for God** Gary A. Kowalski, 2003 Harvard educated theologian Gary Kowalski argues that many of the ills of the modern world from the rise of fundamentalist intolerance to secular society's endless and empty search for thrills stem from the mistaken view that science and faith are antagonists rather than natural allies Both science and faith the author suggests compel us now to move beyond materialism toward an understanding of the world that includes the realities of consciousness and spirit In the twenty first century human beings have less reason than before to feel they hold a privileged or special position in the cosmos but more cause than ever to feel connected and akin to all that is Christians and Jews skeptics and seekers alike will find that this brief persuasively written volume sheds new light on the old questions Who are we Where do we figure in the larger scheme of things And what can we honestly believe **Literature for Science and Mathematics** DIANE Publishing Company, 1998 Representing the perspectives of educators in both the science and mathematics communities this publication is intended to serve as a resource for teachers of students in kindergarten through grade 12 in choosing science and mathematics related literature
