Corrosion and Protection of Marine Engineering Materials Yanhua LEI, 2023-05-12. This book provides a basic introduction to the application of conductive polymers in corrosion protection, especially for the marine environment. Conventional anticorrosive coatings, which are based on heavy metals such as chromium, zinc, and copper, are toxic to the environment. There has been a need to find suitable replacement coatings that are environmentally friendly as well as effective in inhibiting the corrosion of steel. Conductive polymers have garnered much attention in recent years due to their environmentally benign nature and high effectiveness in protecting against corrosion. This book introduces the history of these conductive polymers. The applications of conducting polymers, polymer composites, and nanocomposites for corrosion protection of different industrial metal substrates are explored based on reported experimental data, and their mechanism of inhibition is explained. This book also includes overviews of some recent works on marine antifouling, marine heavy protective coatings, and waterborne paints by conducting polymer and inorganic composites. Conducting polymers and their family of stimuli-actuated polymers exhibit excellent application prospects in the fields of anticorrosion, antibacterial, antibiofouling, and waterborne-based coatings. This book will be of great interest to students, scholars, and professionals alike in the field of corrosion engineering and material science.

Introduction to Corrosion Science E. McCafferty, 2010-01-04. This textbook is intended for a one-semester course in corrosion science at the graduate or advanced undergraduate level. The approach is that of a physical chemist or materials scientist, and the text is geared toward students of chemistry, materials science, and engineering. This textbook should also be useful to practicing corrosion engineers or materials engineers who wish to enhance their understanding of the fundamental principles of corrosion science. It is assumed that the student or reader does not have a background in electrochemistry. However, the student or reader should have taken at least an undergraduate course in materials science or physical chemistry. More material is presented in the textbook than can be covered in a one-semester course, so the book is intended for both the classroom and as a source book for further use. This book grew out of classroom lectures which the author presented between 1982 and the present while a professorial lecturer at George Washington University, Washington DC, where he organized and taught a graduate course on Environmental Effects on Materials. Additional material has been provided by over 30 years of experience in corrosion research, largely at the Naval Research Laboratory, Washington DC, and also at the Bethlehem Steel Company, Bethlehem PA, and as a Robert A. Welch Postdoctoral Fellow at the University of Texas. The text emphasizes basic principles of corrosion science, which underpin
