Long Summer How Climate Changed:

The Long Summer Brian M. Fagan, 2004-01-01 The Long Summer illuminates for the first time the centuries long pattern of human adaptation to the demands and challenges of an ever changing climate demands and challenges that are still with us today **BOOK JACKET** **The Long Summer** Brian Fagan, 2004-12-29 Humanity evolved in an Ice Age in which glaciers covered much of the world But starting about 15 000 years ago temperatures began to climb Civilization and all of recorded history occurred in this warm period the era known as the Holocene the long summer of the human species In The Long Summer Brian Fagan brings us the first detailed record of climate change during these 15 000 years of warming and shows how this climate change gave rise to civilization A thousand year chill led people in the Near East to take up the cultivation of plant foods a catastrophic flood drove settlers to inhabit Europe the drying of the Sahara forced its inhabitants to live along the banks of the Nile and increased rainfall in East Africa provoked the bubonic plague The Long Summer illuminates for the first time the centuries long pattern of human adaptation to the demands and challenges of an ever changing climate challenges that are still with us today **The End of the Long Summer** Dianne Dumanoski, 2010-07-13

For the past twelve thousand years Earth's stable climate has allowed human civilization to flourish But this long benign summer is an anomaly in the Earth's history and one that is rapidly coming to a close The radical experiment of our modern industrial civilization is now disrupting our planet's very metabolism our future hinges in large part on how Earth responds Climate change is already bearing down hitting harder and faster than expected The greatest danger is not extreme yet discrete weather events such as Hurricane Katrina or the calamitous wildfires that now plague California but profound and systemic disruptions on a global scale Contrary to the pervasive belief that climate change will be a gradual escalator ride into balmy temperatures the Earth's climate system has a history of radical shifts dramatic shocks that could lead to the collapse of social and economic systems The question is no longer simply how can we stop climate change but how can we as a civilization survive it The guiding values of modern culture have become dangerously obsolete in this new era Yet as renowned environmental journalist Dianne Dumanoski shows little has been done to avert the crisis or to prepare human societies for a time of growing instability In a work of astonishing scope Dumanoski deftly weaves history science and culture to show how the fundamental doctrines of modern society have impeded our ability to respond to this crisis and have fostered an economic globalization that is only increasing our vulnerability at this critical time She exposes the fallacy of banking on a last minute technological fix as well as the perilous trap of believing that humans can succeed in the quest to control nature Only by restructuring our global civilization based on the principles that have allowed Earth's life and our ancestors to survive catastrophe diversity redundancy a degree of self sufficiency social solidarity and an aversion to excessive integration can we restore the flexibility needed to weather the trials ahead In this powerful and prescient book Dumanoski moves beyond now ubiquitous environmental buzzwords about green industries and clean energy to provide a new cultural map

through this dangerous passage Though the message is grave it is not without hope Lucid eloquent and urgent The End of the Long Summer deserves a place alongside transformative works such as Silent Spring and The Fate of the Earth

McMichael, Alistair Woodward, Cameron Muir, 2017 When we think climate change we think of man made global warming caused by greenhouse gas emissions But natural climate change has occurred throughout human history and populations have had to adapt to its vicissitudes Tony McMichael a renowned epidemiologist and a pioneer in the field of how human health relates to climate change is the ideal guide to this phenomenon and in his magisterial Climate Change and the Health of Nations he presents a sweeping and authoritative analysis of how human societies have been shaped by climate events **A Companion to Global Environmental History** J. R. McNeill, Erin Stewart Mauldin, 2015-05-04 The Companion to Global Environmental History offers multiple points of entry into the history and historiography of this dynamic and fast growing field to provide an essential road map to past developments current controversies and future developments for specialists and newcomers alike Combines temporal geographic thematic and contextual approaches from prehistory to the present day Explores environmental thought and action around the world to give readers a cultural intellectual and political context for engagement with the environment in modern times Brings together environmental historians from around the world including scholars from South Africa Brazil Germany and China **The Routledge Handbook of the Bioarchaeology of Climate and Environmental Change** Gwen Robbins Schug, 2020-10-27 This handbook examines human responses to climatic and environmental changes in the past and their impacts on disease patterns nutritional status migration and interpersonal violence Bioarchaeology the study of archaeological human skeletons provides direct evidence of the human experience of past climate and environmental changes and serves as an important complement to paleoclimate historical and archaeological approaches to changes we may expect with global warming Comprising 27 chapters from experts across a broad range of time periods and geographical regions this book addresses hypotheses about how climate and environmental changes impact human health and well being factors that promote resilience and circumstances that make migration or interpersonal violence a more likely outcome The volume highlights the potential relevance of bioarchaeological analysis to contemporary challenges by organizing the chapters into a framework outlined by the United Nations Sustainable

Development Goals for 2030 Planning for a warmer world requires knowledge about humans as biological organisms with a deep connection to Earth's ecosystems balanced by an appreciation of how historical and socio-cultural circumstances socioeconomic inequality degrees of urbanization community mobility and social institutions play a role in shaping long-term outcomes for human communities Containing a wealth of nuanced perspectives about human environmental relations book is key reading for students of environmental archaeology bioarchaeology and the history of disease By providing a longer view of contemporary challenges it may also interest readers in public health public policy and planning Encyclopedia of Crisis Management K. Speight, 2019-12-17 Tackling one of the most controversial subjects of our time one of the world's foremost environmental and petroleum engineers explores the potential causes and ramifications of global climate change For too many years climate change also referred to as global warming has been assigned predominantly to the emissions of carbon dioxide through the combustion of fossil fuels It must never be forgotten or ignored however that the Earth has been constantly changing since its formation and has gone through different eras like glaciations among others These changes need thousands of years to be made visible and are likely still continuing given the increase in the average temperature of the Earth since the pre-industrial period provided that the measurements of past climatic temperatures are accurate and beyond reproach It follows that the warming trend that has occurred over the past 100 years is very likely to have some origins in natural events as well as in human activity The precise contributions of natural effects and anthropogenic effects on the climate are not known but it is accurate to conclude that many factors continue to influence climate Whether or not human activities have become a dominant force in the changing climate and are responsible for most of the warming observed is still open to question When studying the climate system of the Earth an area of common confusion is whether climate scientists agree or disagree as to whether or not climate change is happening or if it is happening whether or not humans are the primary cause There are a variety of reasons for this but a majority of scientists who study climate and publish in peer-reviewed journals agree that human activity is causing the warming of the Earth The purpose of this book is to weigh all of these various data points and in a scientific and unemotional way arrive at likely conclusions regarding global climate change Whether human activity is the main driver behind our current changes in climate one thing is certain Climate change is happening and we all need to make informed rather than emotional decisions **Weather, Climate and Climate Change** Greg O'Hare, John Sweeney, Rob Wilby, 2014-05-22 A timely and accessible analysis of one of the most crucial and

contentious issues facing the world today the processes and consequences of natural and human induced changes in the structure and function of the climate system Integrating the latest scientific developments throughout the text centres on climate change control addressing how weather and climate impact on environment and society **Environmental Change** Frank Oldfield,2005-08-25 *Environmental Change Key Issues and Alternative Approaches* describes and explains the significance of past and contemporary environmental and climatic change It outlines the conceptual framework for studies of environmental change by posing key questions and presenting the results of relevant research It provides a non specialist introduction to models in environmental change research and to the study of past environmental changes Covering the last 400 000 years special emphasis is placed on past periods of rapid warming the nature of climatic variability over the last 1000 years and the dramatic and accelerating changes in the Earth system heralded by the industrial revolution The book is extensively referenced and illustrated This book provides a balanced non specialist basis for understanding and exploring the scientific issues underlying global change for advanced undergraduates in geography environmental earth biological and ecological sciences **Climate Change And The Cargo Cult** Chris Cunningham,2019-01-31 Climate Change is a major threat to our way of life and requires urgent political action to remedy its many threats but is it a symptom rather than the disease This book argues that the problem lies deep in our commitment to the quest for ever increasing economic growth At some time in the 1970s the Western World passed a point of economic satiety beyond which further economic growth was of little benefit and indeed was counter productive to living the good life We must therefore seek a better understanding of our environment and of what constitutes genuine wealth Life without the frenetic economic activity and culture of selfish possession that drives the modern economy can indeed be more humane more pleasant and more meaningful than what we have today but to reach it will require a major re evaluation of what is important in business politics and culture *Regional Landscapes of the US and Canada* Stephen S. Birdsall,Jon C. Malinowski,Wiley C. Thompson,2017-01-17 Extensively praised *Regional Landscapes of the US and Canada* 8th Edition is known for providing general readers with an excellent introduction to major geographic concepts and fundamental themes The new eighth edition builds on this proven success presenting updated and revised material Anyone interested in the geography of Canada and the US will find this a valuable accessible resource **Impact of Global Changes on Mountains** Velma I.
