Previously called NotesPump.

Allows synchronisation of data between Domino databases and a relational database (either may be the master copy).

Synchronisation may work on a schedule or may be real-time.

Configured via a point-and-click interface from a Notes client.

RDBMS access uses an SQL Interface, allowing joins, row and column selection, etc.

Data may be processed automatically during synchronisation, using a Notes agent at the Domino side or a stored procedure at the RDBMS side.
