Entomology Cedric Gillot, 2013-03-14 The idea of writing this book was conceived when in the late 1960s I began teaching a senior undergraduate class in general entomology I soon realized that there was no suitable text for the class I intended to give The so called general or introductory texts reflected the traditional taxonomic approach to entomology and contained relatively little information on the physiology and ecology of insects This does not mean that there were no books containing such

information There were several but these were so specialized and de tailed that their use in an introductory class was limited I hold a strong belief that an undergraduate general entomology course should provide a balanced treatment of the subject Thus although some time should be devoted to taxonomy including identification best done in the laboratory using primar ily material which students themselves have collected supplemented with specimens from the general collection appropriate time should be given also to discussion of the evolution development physiology and ecology of in sects In the latter category I include the interactions between insects and Man because it is important to stress that these interactions follow normal ecological principles Naturally the format of this book reflects this belief The book has been arranged in four sections each of which necessarily overlaps with the others **Coleccion de Referencia de la Biblioteca Conmemorativa Orton ,**

Foundations of Macroecology Felisa A. Smith,John L. Gittleman,James H. Brown,2014-08-22 Macroecology is an approach to science that emphasizes the description and explanation of patterns and processes at large spatial and temporal scales Some scientists liken it to seeing the forest through the trees giving the proverbial phrase an ecological twist The term itself was first introduced to the modern literature by James H Brown and Brian A Maurer in a 1989 paper and it is Brown s classic 1995 study Macroecology that is credited with inspiring the broad scale subfield of ecology But as with all subfields many modern day elements of macroecology are implicit in earlier works dating back decades even centuries Foundations of Macroecology charts the evolutionary trajectory of these concepts from the species area relationship and the latitudinal gradient of species richness to the relationship between body size and metabolic rate through forty six landmark papers originally published between 1920 and 1998 Divided into two parts Macroecology before Macroecology and Dimensions of Macroecology the collection also takes the long view with each paper accompanied by an original commentary from a contemporary expert in the field that places it in a broader context and explains its foundational role Providing a solid coherent assessment of the history current state and potential future of the field Foundations of Macroecology will be an essential text for students and teachers of ecology alike Proceedings Entomological Society of Ontario,1921
