Nagel, 1977-08-01 **Quasi-Experimental Approaches** James A. Caporaso, Leslie Leon Roos, 1973 **Public Policy and Program Evaluation** Evert Vedung, 2017-07-12

Evaluation is a controversial and little understood strategy of public governance control and decision making. As early as classical antiquity scholars were summoned to court to counsel kings. Public policy and program evaluation is a recent addition to the great chain of attempts to use the brainpower of scholars and scientists to further the interests of the state. Evaluation scholars are asked to provide retrospective assessments of the implementation output and outcome of government measures in order to effect deeper understanding and well grounded decisions on the part of those in charge of government operations. Evaluation is the process of distinguishing the worthwhile from the worthless, the precious from the useless. Evaluation implies looking backward in order to be able to steer forward better. Written from a political science perspective, *Public Policy and Program Evaluation* provides an overview of the possibilities and limits of public sector evaluation. Evert Vedung examines evaluation as a mechanism for monitoring, systematizing and grading government activities and their results so that public officials in their future oriented work will be able to act as responsibly, creatively and efficiently as possible. Topics discussed include: Evaluation Rationality and Theories of Public Management, Models of Evaluation, Internal or External Evaluation, Impact Assessment as Tryout and Social Experimentation, Process Evaluation and Implementation Theory, The Eight Problems Approach to Evaluation and Uses and Users of Evaluation. All evaluation rests upon the idea that perceptions, opinions, intentions, judgments in short everything concerned with the world of human consciousness play such interesting roles in political and administrative action that their functions are worth investigating. Through experience humans may learn from past actions. The interventions of the modern state are so extensive their execution.

Evaluating Public Programs Patrick D. Larkey, 2015-03-08. For effective program evaluation it is necessary to specify a counterfactual state, i.e. what would have happened without the program. Conventional approaches to program evaluation preoccupied with technical and value issues fail to address directly the need for counterfactual arguments. They also fail to recognize the indispensable role of positive theories of technical and behavioral processes in making these arguments. In order to understand the impact of the General Revenue Sharing (GRS) program on the fiscal behavior of municipal governments, Patrick Larkey develops and demonstrates an unconventional approach to program evaluation that overcomes these failures. Drawing on the positive theories of budgetary decisionmaking processes as well as longitudinal revenue and expenditure data from primary sources, the author specifies estimates and tests four bureaucratic process models for each of five city governments receiving GRS funds. Using

these models to generate complex counterfactual hypotheses he then compares the counterfactual patterns with observed patterns to understand the fiscal effects of GRS Originally published in 1979 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905 On

Research Methods in the Social and Health Sciences Ted Palys, Chris Atchison, 2021-02-03 Research Methods in the Social and Health Sciences Research Decisions by Ted Palys and Chris Atchison gives students a thorough thoughtful and highly readable introduction to the entire research process from start to finish From its underlying premise that your research questions and objectives rather than any specific method should guide your research this book discusses each step of the research process from limiting the scope of a literature review to navigating ethical considerations to deciding which methods are best suited for finding answers to specific research questions to how to analyze data and present findings Readers are encouraged to think deeply about each step of the research process The book promotes this deliberation by discussing the strengths and limitations of different methods and Throughout the process the authors provide many examples from their own and student research sharing insights for research decisions arising from that experience Readers will develop the skills to create solid research questions perform literature reviews identify appropriate data sources and methods conduct research analyze and interpret data and translate the resulting knowledge generated from the research process to a wider audience all core parts of the

research process by developing their knowledge and creating confidence in their own decision making skills After explaining the unique and often complementary strengths of qualitative and quantitative methods students focus on what methods are best suited for finding answers to the research questions that interest them Major types of research including experiments case studies surveys quasi experiments ethnographies focus groups participatory action research and archival studies all receive significant coverage The text illustrates how these methods are enhanced by integrating them with 21st century technologies and combining them in mixed methods projects Chapters on constructing a research proposal and disseminating research bookend the process with concrete steps in between to support students designing their own original research projects Study questions at the end of each chapter encourage students to think critically about the research process and how the choices a researcher makes will broaden or constrain what they can find By the end of the text social and health science students will feel confident in undertaking ethical and thoughtful research Urban Planning Methods Ian

Bracken,2014-04-04 In order to develop and exercise their skills urban planners need to draw upon a wide variety of methods relating to plan and policy making urban research and policy analysis More than ever planners need to be able to adapt their methods to contemporary needs and circumstances This introductory textbook focuses on the need to combine traditional research methods with policy analysis in order to understand the true nature of urban planning processes It describes both planning methods and their underlying concepts and principles illustrating applications by reference to the daily activities of planning including the assessment of needs and preferences of the population the generation and implementation of plans and policies and the need to take decisions related to the allocation of land population change employment housing and retailing Ian Bracken also provides a comprehensive guide to the more specialized research literature and case studies of contemporary urban planning practice This book was first published in 1981 *Techniques for Project Evaluation* Guy D. Boston,1977 **Handbook of Research Methods and Applications in Heterodox Economics** The Late Frederic S.

Lee,Bruce Cronin,2016-04-29 Despite the important methodological critiques of the mainstream offered by heterodox economics the dominant research method taught in heterodox programmes remains econometrics This compelling Handbook provides a comprehensive introduction to a range of alternative research methods invaluable for analysing the data prominent in heterodox studies Providing a solid basis for a mixed methods approach to economic investigations the expertly crafted contributions are split into three distinct sections philosophical foundation and research strategy research methods and data collection and applications Introductions to a host of invaluable methods such as survey historical ethnographic experimental and mixed approaches together with factor cluster complex and social network analytics are complemented by descriptions of applications in practice Practical and expansive this Handbook is highly pertinent for students and scholars of economics particularly those dedicated to heterodox approaches as it provides a solid reference for mixed methods not available in mainstream economics research methods courses Document Retrieval Index ,1974 **Abortion Policy**

Jerome S. Legge, 1985-01-01 In the first study of its kind Jerome Legge provides a reasoned and dispassionate summary of the procedures and effects of abortion. The ethics of abortion have been widely discussed by philosophers, social scientists, and health professionals. Until now, however, little has been devoted to the results of various abortion policy changes. Legge examines the effects of abortion policy changes on maternal and infant health in the United States, Great Britain, and Eastern Europe. He looks at both liberal and restrictive abortion policies, demonstrating the importance of historical and cultural context on the outcome of policy changes. Abortion Policy makes available the latest research in the field. It addresses many of the questions evaded in the moral debate on abortion: Have legal abortions lowered the overall number of abortion deaths? Has maternal health improved for society as a whole? Has infant and fetal mortality been reduced? How and to what extent does abortion policy interact with other societal interventions such as health spending and contraception? **Evaluative**

Research in Corrections Stuart Adams, 1975 **The SAGE Handbook of Organization Studies** Stewart R.

Clegg, Cynthia Hardy, Tom Lawrence, Walter R. Nord, 2006-06-21 Praise for the award-winning First Edition: This handbook is organized to help teachers and students to cover the mainstream work in the field of organization studies. This is an excellent reference tool with which to study organizational theory and practice. International Review of Administrative Sciences: The editors have put together an impressive reference work, serious in intent and rigorous in implementation. As a publishing achievement and a scholarly event in the field, SAGE is to be congratulated. It is designed as a work of synthesis to link past and present, general and specific. Journal of General Management: Praise for the New Edition: An excellent collection of papers giving a timely overview of the field. Gareth Morgan: In this substantially updated, revised, and extended edition of the widely acclaimed Handbook, the high standard of the contributions is maintained. Close consideration is given to newly emergent issues such as networks and complexity, as well as more established topics. Metaphors of conversation and discourse are engagingly invoked to make and explore new distinctions, directions, and connections. It is a key reference volume for more advanced students of this rapidly developing field. Hugh Willmott, Diageo Professor of Management Studies, Judge Business School, University of Cambridge: Giving the authors of the Handbook of Organization Studies the opportunity to revise and update their earlier contributions makes this handbook unique. Comparing the revised chapters to their originals offers the reader unparalleled insight into how knowledge develops in our discipline. New frameworks and deeper understandings grounded in continuing scholarship abound in this updated classic. Mary Jo Hatch, C. Coleman McGehee, Eminent Scholars Research Professor of Banking and Commerce, McIntire School of Commerce, University of Virginia: A decade after it first published to international acclaim, the seminal Handbook of Organization Studies has been updated to capture exciting new developments in the field. Providing a retrospective and prospective overview of organization studies, the Handbook continues to challenge and inspire readers with its synthesis of knowledge and literature. As ever, contributions have been selected to reflect the diversity of the field. New chapters cover areas such as organizational change, knowledge management, and organizational

networks Part One reflects on the relationship between theory research and practice in organization studies Part Two address a number of the most significant issues to affect organization studies such as leadership diversity and globalization Comprehensive and far reaching this important resource will set new standards for the understanding of organizational studies It will be invaluable to researchers teachers and advanced students alike **The Evaluation Enterprise** William R. The Age of Direct Citizen Participation Nancy C. Roberts,2015-01-28 Citizen involvement is considered the cornerstone of democratic theory and practice Citizens today have the knowledge and ability to participate more fully in the political technical and administrative decisions that affect them On the other hand direct citizen participation is often viewed with skepticism even wariness Many argue that citizens do not have the time preparation or interest to be directly involved in public affairs and suggest instead that representative democracy or indirect citizen participation is the most effective form of government Some of the very best writings on this key topic which is at the root of the entire reinventing government movement can be found in the journals that ASPA publishes or sponsors In this collection Nancy Roberts has brought together the emerging classics on the ongoing debate over citizen involvement Her detailed introductory essay and section openers frame the key issues provide historical context and fill in any gaps not directly covered by the articles More than just an anthology The Age of Direct Citizen Participation provides a unique and useful framework for understanding this important subject It is an ideal resource for any Public Administration course involving citizen engagement and performance management

Basic Elements of Survey Research in Education Ulemu Luhanga,Allen G. Harbaugh,2021-09-01 In this first book of the series Survey Methods in Educational Research we have brought together leading authors and scholars in the field to discuss key introductory concepts in the creation implementation evaluation and dissemination of survey instruments and their resultant findings While there are other textbooks that might introduce these concepts adequately well the authors here have focused on the pragmatic issues that inevitably arise in the development and administration process of survey instruments Drawing from their rich experiences the authors present these potential speed bumps or road blocks a survey researcher in education or the social sciences might encounter Referencing their own work and practice the authors provide valuable suggestions for dealing with these issues your advisor never told you about And all of the recommendations are aligned with standard protocols and current research on best practices in the field of research methodology This book is broken into four broad units on creating survey items and instruments administering surveys analyzing the data from surveys and stories of successful administrations modeling the entire research cycle Each chapter focuses on a different concept in the survey research process and the authors share their approaches to addressing the issues These topics include survey item construction scale development cognitive interviewing measuring change with self report data translation issues with surveys administered in multiple languages working with school and program administrators when implementing surveys a review of current software used in survey research the use of weights response styles assessing validity of results and

effectively communicating your results and findings and much more The intended audience of the volume will be practitioners administrators teachers as researchers graduate students social science and education researchers not experienced in survey research and students learning program evaluation In brief if you are considering doing survey research this book is meant for you Juvenile Justice and Delinquency Prevention National Advisory Committee on Criminal Justice Standards and Goals.
