Rabassa, 2011-09-22 Written by highly qualified Argentine scientists and scholars this book focuses on the uninterrupted geological and paleontological record of Patagonia and Tierra del Fuego since the Miocene Pliocene boundary to the arrival of man and modern times This region is an outstanding area for research with significant interest at the international level It provides an updated overview of the scientific work in all related fields with a strong paleoclimatic approach Patagonia has

also been a sort of a paleoclimatic bridge between the Antarctic Peninsula and the more northerly land masses since the final opening of the Drake Passage in the middle Miocene. Timely and comprehensive. The Late Cenozoic of Patagonia and Tierra del Fuego is the only monograph book written in English. One stop resource for paleontological information of the Late Cenozoic of Patagonia. Covers 5 million years in the uninterrupted history of Patagonia and Tierra del Fuego. Comprehensive coverage of the region written by highly qualified Argentine scientists and scholars. *Geology and Landscapes of the Eastern Pyrenees* Marc Calvet, Magali Delmas, Yanni Gunnell, Bernard Laumonier, 2022-06-04. This book provides a synthesis of the physiography and geodynamics of the entire Pyrenean orogen and its foreland basins providing the big picture structure of the orogen and chronology of its formation overview of its post orogenic evolution and Quaternary and recent landscape history. One part of the book proposes a 6-7 day itinerary across the eastern and east central Pyrenees two areas that currently provide the richest best documented and most carefully curated database on the post orogenic evolution of the mountain belt. The book deals with three complementary topics: i) geodynamics i.e. the long term post orogenic evolution of the Pyrenees since the declining stages of tectonic collision ca. 30 million years ago and within the wider reference frame of Iberia, the Western Mediterranean and the Atlantic margin; ii) geomorphological processes and landforms that have conspired to shape the eastern part of the French and Spanish Pyrenees in response to base level and climate related changes over the same time period; iii) geoheritage i.e. educational vignettes of the flagship landscape units and typical geological sections of the study area. Written as a field guide it is designed to help readers to construct discovery based itineraries through the region with options and variants depending on time and physical ability allowing them to appreciate the key landscape and geoheritage features over the course of 1 week with potential for much more. This GeoGuide is primarily aimed at confirmed geoscientists from most disciplines in Earth science at postgraduate students engaged in field studies and at curiosity driven educated amateurs keen to enhance their understanding of spectacular or enigmatic features encountered on their travels.

European Glacial Landscapes David Palacios, Philip D. Hughes, Vincent Jomelli, Luis M. Tanarro, 2023-10-21. European Glacial Landscapes. The Holocene presents the current state of knowledge on glacial landscapes of Europe and nearby areas over the Holocene to deduce the influence of atmospheric and oceanic currents and the insolation forcing variability and volcanic activity on Holocene paleoclimates, the existence of asynchronies in the timing of occurrence of glacier expansion and shrinkage during the Holocene, time lags between the identification of oceanic and atmospheric changes and those occurring in glacial extension during the Holocene, the role of Holocene glaciers on the climate of Europe and on sea level variability and the delimitation of landscapes that need special protection. Students, academics and researchers in Geography, Geology, Environmental Sciences, Physics and Earth Science departments will find this book provides novel findings of all the major European Regions in a single publication with updated information about Holocene glacial geomorphology and paleo-climatology and clear figures that model the landscapes covered. Provides a synthesis and summary of glacial processes in

Europe over the Holocene period Features research from experts in palaeo climatology palaeo oceanography and palaeo glaciology Includes access to a companion website with an interactive map photos of glacial features and geospatial data related to European Glacial Landscapes Quaternary of the Trent David R. Bridgland, Andy Howard, Mark J. White, Tom S. White, 2014-03-31 This volume is an integrated overview and synthesis of available data relating to the Quaternary evolution of the River Trent It provides detailed descriptions of the Pleistocene sedimentary records from the Trent its tributaries and related drainage systems a sedimentary record that spans a period of approximately half a million years and the biostratigraphical and archaeological material preserved therein Significant new data are presented from recently discovered sites of geological and archaeological importance including previously unrecognised fluvial deposits as well as novel analyses such as mathematical modelling of fluvial incision as recorded by the river terrace deposits In combination with a thorough review of the literature on the Trent these new data have contributed to revised chronostratigraphical and palaeogeographical frameworks for central England and revealed the complexity of the Pleistocene fluvial and glacial records in this region The fragmentary Trent terrace sequence is an important element of wider reconstructions of Pleistocene palaeodrainage in Britain providing a link between the records preserved in the English Midlands and those in East Anglia

Potekhina, 2020-09-30 This volume covers the Prehistory of Ukraine from the Lower Palaeolithic through to the end of the Neolithic periods This is the first comprehensive synthesis of Ukrainian Prehistory from earliest times through until the Neolithic Period undertaken by researchers who are currently investigating the Prehistory of Ukraine At present there are no other English language books on this subject that provide a current synthesis for these periods The chapters in this volume provide up to date overviews of all aspects of prehistoric culture development in Ukraine and present details of the key sites and finds for the periods studied The book includes the most recent research from all areas of prehistory up to the Neolithic period and in addition areas such as recent radiocarbon dating and its implications for culture chronology are considered as is a consideration of aDNA and the new insights into culture history this area of research affords alongside recent macrofossil studies of plant use and anthropological and stable isotope studies of diet which all combine to allow greater insights into the nature of human subsistence and cultural developments across the Palaeolithic to Neolithic periods in Ukraine It is anticipated that this book will be an invaluable resource for students of prehistory throughout Europe in providing an English language text that is written by researchers who are active in their respective fields and who possess an intimate knowledge of Ukrainian prehistory **Iceland -**

Modern Processes and Past Environments C. Caseldine, A. Russell, J. Hardardóttir, O. Knudsen, 2005-04-28 Iceland provides an unique stage on which to study the natural environment both past and present and it is understanding both aspects of reconstructing the past and observing and interpreting the present that form the focus of the contributions to this volume The papers are all written by active researchers and incorporate both reviews and new data Although concentrating

largely on the recent Quaternary timescale a wide range of topics is explored including subglacial volcanism onshore and offshore evidence for the Last Glacial Maximum and subsequent deglaciation current glacial characteristics including j kulhlaups and glacial landsystems soil development Holocene ecosystem change current oceanography impacts of volcanic sulphur loading chemical weathering and the CO2 budget and documentary evidence for historical climate The key element of the volume is that for the first time it provides a wide overview of a range of topics for which Iceland provides an almost unparalleled laboratory emphasizing the importance of research on this small island for studies over a much broader global scale These reviews point the way to future research directions and are supplemented by extensive illustrations and a comprehensive bibliography Wide range of related topics covered both from a present day and quaternary perspective Reviews from scientists active in each research area across a range of subjects providing both overviews and new data supplemented by an extensive bibliography Extensive illustrations and examples from the field **Juneau Icefield**

Research Project (1949-1958) Cal Heusser, 2007-04-17 The Juneau Icefield Research Project JIRP was formed to find a prototype area to study Alaska's coastal glaciers and trends in climatic change For the past 57 years JIRP has conducted a systematic study of key receding and advancing glaciers including Lemon Creek and Taku Glaciers From this study a model has been developed to study the mass balance of these glaciers and their relation to general atmospheric circulation Taku's mass balance was expected to provide a meaningful assessment of flakier climate relations and environmental trends specifically the increase in atmospheric trace element pollution and global warming Juneau Icefield Research Project 1949-1958 is represented by 15 chapters organized in four parts Background of the Project Early Years of the Project 1949-1952 Later Years of the Project 1953-1958 and Summation and Epilogue After describing the Project's background Chapters 3 through 12 cover year by year activities personnel logistics and research of the Taku and Lemon Creek Glaciers These chapters included day to day journal entries that represent a record of the informal itineraries covering the course of the study Chapters 13 and 14 summarize glaciological findings on Taku Glacier and the status of hydrological budgets on Lemon Creek Glacier through the International Geophysical year 1957-1968 The final chapter of the text is an overview of paleoecological work by the Project in North Pacific America brought into the context of modern research with the recognition of glacier climate cycles Documents the study Juneau Icefield Research Project on a year by year account covering activities personnel logistics and research Discusses the model developed from the JIRP and explains its importance in predicting future climate changes Presents the information with day to day journal entries making the text attractive and easy to read Quaternary Glaciation in the Mediterranean Mountains P.D. Hughes, J.C. Woodward, 2017-01-30 The mountains of the Mediterranean world are now largely ice free but many were repeatedly glaciated during the Quaternary ice age This created spectacular glaciated landscapes with a rich array of glacial deposits and landforms The glacial and glacio fluvial records are often very well preserved and our understanding of the timing of Quaternary glaciation has very

recently been transformed through the application of dating methods utilizing uranium series and cosmogenic isotopes. Glacial records from the Mediterranean now boast some of the most robust chronologies for mountain glaciation anywhere in the world; they represent a unique archive of Quaternary environmental change of global significance. The southerly latitude and relatively small size of Mediterranean glaciers rendered them especially sensitive to Pleistocene and Holocene climate changes. This volume brings together the leading researchers and the latest research on Mediterranean glaciation. Several papers also explore glacier behaviour in the Holocene, including those glaciers of southernmost Europe at risk of disappearing this century.

The Climate of Past Interglacials F. Sirocko, M. Claussen, T. Litt, M. F. Sanchez-Goni, 2006-12-08

Historically, climate fluctuations such as the Little Ice Age show that interglacial climate change is not entirely stable but responds to even subtle changes in radiative forcing. Through research, it has been made clear that even an abrupt change of climate within years is not just a theoretical possibility but has in fact happened in the prehistoric past. It is therefore clear that in principle it could happen again. Human civilization has exploded under the mild and relatively stable climatic conditions that have prevailed over the last 11 000 years. This book focuses on revisiting the past and to study climate and environment in a suite of experiments where boundary conditions are similar but not identical to today so we can learn about the climate environment system, its sensitivity thresholds and feedback. The palaeoclimate community holds an important key to scientific information on climate change that provides a basis for appropriate adaptation and mitigation strategies. The authors of this book have taken up this challenge and summarize their results in this special volume. It presents state of the art science on new reconstructions from all spheres of the Earth System and on their synthesis on methodological advances and on the current ability of numerical models to simulate low and high frequency changes of climate environment and chemical cycling related to interglacials. Summarizes important information on climate change providing a basis for appropriate adaptation and mitigation strategies for human civilization. Reports on new reconstructions on methodological advances, numerical models simulating low and high frequency changes and chemical cycling related to interglacials. Incorporates palaeovegetation and numerical modeling of climate and environmental and geochemical parameters to address regional feedback to global change with successful data models.
