Quaternary Environment In Hungary Studies In Geography In Hungary:

Quaternary Environment in Hungary Márton Pécsi, Ferenc Schweitzer, 1991 *The Physical Geography of Hungary* Gábor Mezősi, 2016-10-05 This book presents the most comprehensive and detailed overview of the physical environment of Hungary. The book makes a specific effort to connect regional geography with natural forcing and influencing factors. The first section discusses general characteristics relating to the physical geography of Hungary on a more theoretical basis including relief evolution, climate, hydrography, soils, and vegetation. The second part focuses on regional content and analyzes conflicts, environmental values, threats, and impacts of the different geographical units. This book appeals to researchers as well as students of physical geography and related disciplines and serves as a useful source for regional information on Hungary. This book can also be used as a field guide of the physical properties of this European country. Quaternary Environment in Hungary Ferenc Schweitzer, Márton Pécsi, 1991 Landform Evolution Studies in Hungary Márton Pécsi, 1999 This summary of the main achievements in geomorphological and geogenetic research in Hungary is drawn from jubilee sessions held in 1997 to celebrate the founding of the Hungarian Geological Society and the Hungarian Geographical Society. The three sections focus on working theories and elaborations concerning the geomorphic evolution of Hungarian land, main geomorphic processes, and surveying the relief and landforms. Portland, OR. **Palaeolimnological Proxies as Tools of Environmental Reconstruction in Fresh Water** Krisztina Buczkó, János Korponai, Judit Padisák, Scott W. Starratt, 2010-05-30 Palaeolimnology is one of the most rapidly developing fields of limnology. The primary objective of this volume is to present new palaeolimnological findings from eastern and central Europe. Although this area has sometimes received less attention than other areas of Europe, the lakes and mires coupled with the variability in landscape and the local differences in climate provide unique opportunity for studying palaeolimnology. The volume starts with a review on late Quaternary records from the Carpathian region followed by new results on the history of a crater lake, Lake Saint Ana, glacial lakes in the Tatra Mountains, and Lake Bled in Slovenia. In addition, the various papers provide new insights on the development of lakes and bogs during the late glacial and Holocene using a wide range of palaeolimnological proxies including diatoms, pollen, macrofossils, pigments, cladoceran remains, chironomids, chaoborids, stable isotopes, and geochemistry. The motivation for collecting recent knowledge derives from the recognition of the importance and applicability of palaeolimnological tools to help in defining reference conditions as designated within the Water Framework Directives and estimating influence of global climate change on surface waters. *Ecotones Between Forest and Grassland* Randall W. Myer, 2012-07-10 Ecotones are dynamic overlapping boundary areas where major terrestrial biomes meet. As past studies have shown and as the chapters in this book will illustrate, their structure, size, and scope have changed considerably over the millennia, expanding and shrinking as climate and other driving conditions also changed. Today, however, many of them are changing at a rate not seen for a long time, perhaps largely

due to climate change and other human induced factors Indeed ecotones are more sensitive to climate change than the biomes on either side and thus may serve as critical early indicators of future climate change As ecotones change they also redefine the limits of the biomes on either side by altering their distributions of species because in addition to their own endemic species any ecotone will also have species from both adjoining biomes Consequently they may also be places of high levels of species interaction serving as active evolutionary laboratories which generate new species that then migrate back into adjacent biomes Ecotones Between Forest and Grassland explores how these ecotones have changed in the past how they are changing today and how they are likely to change in the future The book includes chapters from around the world with a special focus on South American and Neotropical ecotones
