Distributed Communities on the Web Peter Kropf, Gilbert Babin, John Plaice, Herwig Unger, 2003-06-29

Communities are groupings of distributed objects that are capable of communicating directly or indirectly through the medium of a shared context To support communities on a wide scale will require developments at all levels of computing from low level communication protocols supporting transparent cess to mobile objects through to distributed operating systems through to high level programming models allowing complex interaction between objects This workshop brought together researchers interested in the technical issues of supporting communities This workshop was the third in the DCW series The rst two entitled D tributed Computing on the Web took place in 1998 and 1999 at the University of Rostock with proceedings published by the University of Rostock Press This year the workshop also incorporated the ISLIP International Symposium on Languages for Intensional Programming symposium

The ISLIP symposia have taken place every year since 1988 and have led to two volumes published by World Scientific: *Intensional Programming I* 1995 and *Intensional Programming II* 2000. While the two conferences emerged from different needs, their focus merged to such an extent that it became clear that a joint conference promised to offer great opportunities.

Faithful Measures Roger Finke, Christopher D.

Bader, 2017-10-10 A venture into the art and science of measuring religion in everyday life. In an era of rapid technological advances, the measures and methods used to generate data about religion have undergone remarkably little change. *Faithful Measures* pushes the study of religion into the 21st century by evaluating new and existing measures of religion and introducing new methods for tapping into religious behaviors and beliefs. This book offers a global and innovative approach with chapters on the intersection of religion and new technology such as smart phone apps, Google Ngrams, crowdsourcing data, and Amazon buying networks. It also shows how old methods can be improved by using new technology to create online surveys with experimental designs and by developing new ways of mining data from existing information. Chapter contributors thoroughly explain how to employ these new techniques and offer fresh insights into understanding the complex topic of religion in modern life. Beyond its quantitative contributions, *Faithful Measures* will be an invaluable resource for inspiring a new wave of creativity and exploration in our connected world.

Invariant Measurement George Engelhard, Jr., 2013-05-07 This introductory text describes the principles of invariant measurement: how invariant measurement can be achieved with Rasch models and how to use invariant measurement to solve measurement problems in the social, behavioral, and health sciences. Rasch models are used throughout, but a comparison of Rasch models to other item response theory (IRT) models is also provided. Written with students in mind, the manuscript was class-tested to help maximize accessibility. Chapters open with an introduction and close with a summary and discussion. Numerous examples and exercises demonstrate the main issues addressed in each chapter. Key terms are defined when first introduced and in an end-of-text glossary. All of the book's analyses were conducted with the Facets program. The data sets used in the book, sample syntax files for running the Facets program, Excel files for creating item and person response functions, links to related websites, and other material are available at www.GeorgeEngelhard.com. Highlights include: A strong philosophical and methodological approach to measurement in the human sciences; Demonstrations of how measurement problems can be addressed using invariant measurement; Practical illustrations of how to create and evaluate scales using invariant measurement; A history of measurement based on test score and scaling traditions; Previously unpublished work in analyzing rating data, the detection and measurement of rater errors, and the evaluation of rater accuracy; A review of estimation methods, model data fit indices used to evaluate the quality of rater-mediated assessments, rater error and bias, and rater accuracy. Intended as a supplementary text for graduate or advanced undergraduate courses on measurement or test theory, item response theory, scaling theory, psychometrics, advanced measurement techniques, research methods, or evaluation research taught in

education psychology and the social and health sciences the book also appeals to practitioners and researchers in these fields who develop or use scales and instruments Only a basic mathematical level is required including a basic course in statistic

Performance of Urban Sewer Systems Bryan Ellis, Jean-Luc Bertrand-Krajewski, 2010-02-10 Sewer systems constitute a very significant heritage in European cities. Their structural quality and functional efficiency are key parameters to guarantee the transfer of domestic and industrial wastewater to treatment plants without infiltration nor exfiltration. Infiltration of groundwater is particularly detrimental to treatment plant efficiency while exfiltration of wastewater can lead to groundwater contamination. The European research project APUSS (Assessing infiltration and exfiltration on the Performance of Urban Sewer Systems) was devoted to sewer infiltration and exfiltration questions. It was structured in three main Work Areas dealing respectively with: i) the development of new measurement methods based on tracer experiments and accounting for detailed uncertainty analyses; ii) the implementation of models and software tools to integrate structural and experimental data and to facilitate data display, operational management and decision making processes; and iii) the integration of economic and operational questions by means of cost estimation, economic evaluation, performance indicators and multi-criteria methods applied to investment rehabilitation strategies. This final report describes the objectives, methods and main results for each Work Area. References to detailed methods, protocols, reports and tools are given in this final report which will be an invaluable source of information for all those concerned with the performance of urban sewer systems.

Transforming Spirituality F. LeRon Shults, Steven J. Sandage, 2006-06 Explores the concept of spiritual transformation through the lenses of theology and psychology.

Religion, Intolerance, and Conflict Steve Clarke, Russell Powell, Julian Savulescu, 2013-05-30 The relationship between religion, intolerance and conflict has been the subject of intense discussion, particularly in the wake of the events of 9/11 and the ongoing threat of terrorism. This book contains original papers written by some of the world's leading scholars in anthropology, psychology, philosophy and theology, exploring the scientific and conceptual dimensions of religion and human conflict. Authors investigate the following themes: the role of religion in promoting social cohesion and the conditions under which it will tend to do so; the role of religion in enabling and exacerbating conflict between different social groups and the conditions under which it will tend to do so; and the policy responses that we may be able to develop to ameliorate violent conflict and the limits to compromise between different religions. The book also contains two commentaries that distill, synthesize and critically evaluate key aspects of the individual chapters and central themes that run throughout the volume. The volume will be of great interest to all readers interested in the phenomenon of religious conflict and to academics across a variety of disciplines including religious studies, philosophy, psychology, theology, cognitive science, anthropology, politics, international relations and evolutionary biology.
