

Preface

This is the second edition of the SAE Aerospace Applied Thermodynamics Manual. It is a continuation and an up-dating of the SAE Aerospace Applied Thermodynamics Manual originally published and initially revised by SAE Technical Committee AC-9 under the chairmanship of W. W. Reaser of McDonnell Douglas Corp. and R. L. Messinger of Lockheed-Aircraft Corp. This second edition has been prepared as a continuing effort to provide engineers a single up-to-date source of reference material for use in the field of thermodynamics and those fields commonly associated with it in the aerospace industries. Those related subjects include aerodynamics, fluid dynamics, heat transfer, and properties of materials. Also included are procedures and equations commonly used in the application of these technologies along with design information on the aerospace systems in which they are commonly applied.

The Manual is organized into four major sections:

1. Engineering Fundamentals
2. Thermo-Physical Properties
3. Aero Application Engineering
4. Space Application Engineering

An attempt has been made to make the manual of practical value to engineers. Each section has been prepared by engineers who are experienced in, and are currently actively engaged in, the field of their assigned topics. An effort has been made to ensure the applicability of the material to both the aircraft and space fields.

The responsibility for the SAE Aerospace Applied Thermodynamics Manual is vested in Committee AC-9, Aircraft Environmental Systems, of the Aerospace Equipment Division of the Society of Automotive Engineers. Within Committee AC-9, the preparation of this second edition has been the assignment of Subcommittee AC-9B, Aerospace Applied Thermodynamics Manual. The actual work has been accomplished by many engineers from throughout the aerospace industry. Primary responsibility for the parts of this Manual were as follows:

Part 1A	G. E. Gregg	The Boeing Co.
