## **Longevity The Biology And Demography Of Life Span:**

**Longevity** James R. Carey, 2003-03-02 Despite our deep interest in mortality little is known about why some individuals live to middle age and others to extreme old age Life span mortality and aging present some of the most profound mysteries in biology In *Longevity* James Carey draws on unprecedented data to develop a biological and demographic framework for identifying the key factors that govern aging life span and mortality in humans and other animals Carey presents the results of a monumental twelve year National Institute on Aging funded research project on the determinants of longevity using data from the life tables of five million Mediterranean fruit flies the most comprehensive set of life table studies ever on the mortality dynamics of a single species He interprets the fruit fly data within the context of human aging and the aging process in general to identify the determinants of mortality Three key themes emerge the absence of species specific life span limits the context specific nature of the mortality rate and biodemographic linkages between longevity and reproduction A powerful foundation for the emerging field of biodemography and a rich framework for considering the future of human life span *Longevity* will be an indispensable resource for readers from a range of fields including population biology demography gerontology ecology evolutionary biology and medical research *Human Longevity, Individual Life Duration, and the Growth of the Oldest-Old Population* Jean-Marie Robine, Eileen M. Crimmins, Shiro Horiuchi, Yi Zeng, 2007-03-21 Old age survival has considerably improved in the second half of the twentieth century Life expectancy in wealthy countries has increased on average from 65 years in 1950 to 76 years in 2005 The rise was more spectacular in some countries the life expectancy for Japanese women rose from 62 years to 86 years during the same period Driven by this longevity extension the population aged 80 and over in those countries has grown fivefold from 8.5 million in 1950 to 44.5 million in 2005 Why has such a substantial extension of human lifespan occurred How long can we live In this book these fundamental questions are explored by experts from such diverse fields as biology medicine epidemiology demography sociology and mathematics they report on recent cutting edge studies about essential issues of human longevity such as evolution of lifespan of species genetics of human longevity reasons for the recent improvement in survival of the elderly medical and behavioral causes of deaths among very old people and social factors of long survival in old age **Biodemography of Aging** Anatoliy I. Yashin, Eric Stallard, Kenneth C. Land, 2016-08-22 This volume is a critical exposition of the data and analyses from a full decade of rigorous research into how age related changes at the individual level along with other factors contribute to morbidity disability and mortality risks at the broader population level After summarizing the state of our knowledge in the field individual chapters offer enlightening discussion on a range of key topics such as age trajectory analysis in select and general populations incidence age patterns of major chronic illnesses and indices of cumulative deficits and their use in characterizing and understanding the detailed properties of individual aging The book features comprehensive statistical analyses of unique longitudinal data sets including the unique resource of the Framingham Heart Study with its more than 60

years of follow up Culminating in penetrating conclusions about the insights gained from the work involved this book adds much to our understanding of the links between aging and human health      **Handbook of Population** Dudley L.
