Looking At Looking An Introduction To The Intelligence Of Vision:

Looking at looking Theodore E. Parks,Irvin Rock,2000-09-06 This volume brings together a selection of the most influential current thinkers in the area of visual perception We are often confused by our visual systems for example size distortions but there is an underlying intelligence to our visual system even in the face of what would seem to be short circuits within our sensory processing This book explores varying views of this intelligence **Looking at Looking**

Theodore E. Parks,2008-11 Many of the most captivating phenomena and ideas within the field of perception revolve around the question of the intelligence or not of vision Written by some of the field s top professionals Looking at Looking makes these readily available to new upper division students as a compelling answer to the question Why study perception

Parallel Processing for Artificial Intelligence 1 L.N. Kanal,H. Kitano,V. Kumar,C.B.

Suttner,2014-06-28 Parallel processing for AI problems is of great current interest because of its potential for alleviating the computational demands of AI procedures The articles in this book consider parallel processing for problems in several areas of artificial intelligence image processing knowledge representation in semantic networks production rules mechanization of logic constraint satisfaction parsing of natural language data filtering and data mining The publication is divided into six sections The first addresses parallel computing for processing and understanding images The second discusses parallel processing for semantic networks which are widely used means for representing knowledge methods which enable efficient and flexible processing of semantic networks are expected to have high utility for building large scale knowledge based systems The third section explores the automatic parallel execution of production systems which are used extensively in building rule based expert systems systems containing large numbers of rules are slow to execute and can significantly benefit from automatic parallel execution The exploitation of parallelism for the mechanization of logic is dealt with in the fourth section While sequential control aspects pose problems for the parallelization of production systems logic has a purely declarative interpretation which does not demand a particular evaluation strategy In this area therefore very large search spaces provide significant potential for parallelism In particular this is true for automated theorem proving The fifth section considers the problem of constraint satisfaction which is a useful abstraction of a number of important problems in AI and other fields of computer science It also discusses the technique of consistent labeling as a preprocessing step in the constraint satisfaction problem Section VI consists of two articles each on a different important topic The first discusses parallel formulation for the Tree Adjoining Grammar TAG which is a powerful formalism for describing natural languages The

second examines the suitability of a parallel programming paradigm called Linda for solving problems in artificial intelligence Each of the areas discussed in the book holds many open problems but it is believed that parallel processing will form a key ingredient in achieving at least partial solutions It is hoped that the contributions sourced from experts around the world will inspire readers to take on these challenging areas of inquiry
