Measurement Of Segregation In The Labor Force:

The Measurement of Segregation in the Labor Force Yves Flückiger, Jacques Silber, 2012-12-06 When considering labor market inequality across different demographic groups in society it is natural for most individuals to think of discrimination as the most likely explanation Since the pioneering work of University of Chicago economist and Nobel Laureate Gary Becker there has been an abundance of both theoretical and empirical analysis on the issue of discrimination What economists and other social scientists have learned is that the measurement of discrimination has proven to be far more challenging than anyone could have imagined There is of course the technology of measurement that has to be addressed but there is also the related matter of how to define discrimination Another University of Chicago economist and Nobel Laureate Milton Friedman cautioned against overlooking the distinction between equality of outcomes and equality of opportunity The present book is a tour de force on the topic of segregation in the labor force Segregation is a concept that is related to discrimination but it is not necessarily the same as discrimination Segregation can be a mechanism for societal enforcement of discrimination but it can also arise as the result of voluntary choices related to differences in preferences and household division of labor The authors offer a counterweight to the traditional emphasis on wage discrimination over segregation and labor market segmentation The subject is thoroughly addressed on both theoretical and empirical grounds with special emphasis on gender segregation in the Swiss labor market

The Measurement of Segregation in the Labor Force Yves Flückiger, Jacques Silber, 1999-07-16 Models and Measurement of Welfare and Inequality Wolfgang Eichhorn, 2012-12-06 The literature on economic problems connected with measuring and modelling of welfare and inequality has grown rapidly within the last decade Since this literature is scattered throughout a great number of journals on economics economic theory econometrics and statistics it is difficult to get an adequate picture of the present state of the art Therefore books should appear from time to time which offer a representative cross section of the latest results of research on the subject This book offers such material It contains 54 articles by 84 authors from four of the five continents Each paper has been reviewed by two referees As a consequence the contributions of this book are revised versions or in many cases revised revisions of the original papers The book is divided into four parts Part I Measurement of Inequality and Poverty This part contains eleven papers on theory and empirical applications of inequality and or poverty measures Two contributions deal with among other things experimental findings on questions concerning the acceptance of distributional axioms Part II Taxation and Redistribution Distributional or rather redistributive aspects play an important role in Part II The topics of the 14 papers included in this part range from tax progressivity and redistribution allocative consequences of splitting under income taxation and connections between income tax and cost of living indices to merit goods and welfarism as well as to welfare aspects of tax reforms

Sex Discrimination in the Labor Market Joni Hersch, 2007-01-02 Women have made huge advances relative to men in the labor force occupational status and educational attainment but women continue to earn less than men While the gender pay gap has narrowed a substantial gap remains Sex Discrimination in the Labor Market examines sources of this pay disparity and the factors that contribute to this gap Whether sex discrimination plays a role in the gender pay gap is a topic of considerable debate Many researchers question the role of discrimination and attribute the residual pay gap to gender differences in preferences especially with respect to balancing work with family responsibilities Sex Discrimination in the Labor Market shows that sex discrimination contributes to the unexplained gender pay gap which is consistent with high profile sex discrimination litigation suggesting continuing bias in the labor market on the basis of sex
