Radical Science Essays Les Levidow, 1986      Science, Faith, Society: New Essays on the Philosophy of Michael Polanyi Péter Hartl, 2024-04-03 The book is arguably the first comprehensive collection of essays on Michael Polanyi's social political philosophy. The essays combine philosophical and historical approaches to show Polanyi's social thought in the context of his epistemology and philosophy of science as well as the 20th century intellectual history. This volume appeals to specialists in Michael Polanyi's philosophy, political philosophers who are interested in the 20th century political thought, mainly conservative liberal political tradition. Furthermore, it appeals to scholars focusing on the intersections between epistemology and political philosophy.

Science In China, 1600-1900: Essays By Benjamin A Elman Benjamin A Elman, 2015-05-07 Distinguished historian Benjamin A Elman's collective volume on the history of science in imperial China brings together over 30 years of historical literature on the subject. With updates to the literature and new material including transcripts of podcasts and translated interview articles, *Science in China* takes the reader on a journey starting in the early 17th century with the missionary efforts of the Jesuits in China and ending with the Protestant missions in the 19th century. These two milestone encounters brought Western sciences to local Chinese scholars with great success in shaping modern Chinese science. Elman studies the interaction between Western and Chinese sciences through philological research and evidence and treats the two encounters not as separate events but as a continuum of creative exchange of scientific knowledge and discourse.

**The Scientific World-Perspective and Other Essays, 1931-1963** J. Giedymin, 2012-12-06 Though with considerable delay, most of the writings of Polish logicians of the inter war period are now available in English. This is not yet true of Polish philosophy. In the present volume, English speaking readers will find for the first time a sizeable collection of the articles of one of the most original and distinguished of Poland's philosophers of the present century, Kazimierz Ajdukiewicz (1890-1963). To be sure, Ajdukiewicz was a philosopher logician from the beginning of his career. His first work of some importance, a monograph entitled *From the Methodology of the Deductive Sciences* (1921), post-dated two abstracts published in 1919-20, exhibited two features which were to become characteristic of the style of his later philosophy. On the one hand, the monograph was the result of Ajdukiewicz's deep interest in the systems of modern logic, the foundations of mathematics, in the properties of deductive systems and their relevance to philosophy; on the other hand, the monograph was an attempt at developing an understanding methodology in the sense of Gennap Versteherende Methodologie of deductive sciences, i.e. a pragmatic study of axiomatic systems which would supplement purely formal investigations of those systems. The former made him a close ally of logical empiricists; the latter was rooted in the hermeneutic tradition of the second half of the 19th century Dilthey, which spilled over into the 20th century Spranger and which was not cherished at all by logical empiricists.

Pimbert, 2013-11-05 The book discusses protected areas and conservation policies critically reviewing protected areas management and the concepts of conservation Drawing on case studies from North America Europe Asia and Africa it shows how they affected local people their customary rights livelihoods well being and social cohesion The book argues for an overhaul of conservation thinking and practice *Clearcutting the Pacific Rain Forest* Richard A. Rajala, 2011-11-01 This book integrates class environmental and political analysis to uncover the history of clearcutting in the Douglas fir forests of B C Washington and Oregon between 1880 and 1965 Part I focuses on the mode of production analyzing the technological and managerial structures of worker and resource exploitation from the perspective of current trends in labour process research Rajala argues that operators sought to neutralize the variable forest environment by emulating the factory model of work organization The introduction of steam powered overhead logging methods provided industry with a rudimentary factory regime by 1930 accompanied by productivity gains and diminished workplace autonomy for loggers After a Depression inspired turn to selective logging with caterpillar tractors timber capital continued its refinement of clearcutting technologies in the post war period achieving complete mechanization of yarding with the automatic grapple Driviiing this process of innovation was a concept of industrial efficiency that responded to changing environmental conditions product and labour markets but sought to advance operators class interests by routinizing production The managerial component of the factory regime took shape in accordance with the principles of the early 20th century scientific management movement Requiring expertise in the organization of an expanded technologically

sophisticated exploitation process operators presided over the establishment of logging engineering programs in the region's universities. Graduates introduced rational planning procedures to coastal logging contributing to a rate of deforestation that generated a corporate call for technical forestry expertise after 1930. Industrial foresters then emerged from the universities to provide firms with data needed for long range investment decisions in land acquisition and management. Part II constitutes an environmental and political history of clearcutting. This reconstructs the process of scientific research concerning the factory regime's impact on the ecology of the Douglas fir forest assessing how knowledge was utilized in the regulation of cutting practices. Analysis of business government relations in British Columbia, Washington and Oregon suggests that the reliance of those client states on revenues generated by timber capital encouraged a pattern of regulation that served corporate rather than social and ecological ends.

**Other Women** Anita Levy, 2014-07-14 In this ambitious work Anita Levy exposes certain forms of middle class power that have been taken for granted as common sense and laws of nature. Joining an emergent tradition of cultural historians who draw on Gramsci and Foucault she shows how middle class hegemony in the nineteenth century depended on notions of gender to legitimize a culture specific and class specific definition of the right and wrong ways of being human. The author examines not only domestic fiction particularly Emily Brontë's *Wuthering Heights* but also nineteenth century works of the human sciences including sociological tracts, anthropological treatises, medical texts and psychological studies. She finds that British intellectuals of the period produced gendered standards of behavior that did not so much subordinate women to men as they authorized the social class whose women met norms of appropriate behavior. This class was considered to be peculiarly fit to care for other social and cultural groups whose women were improperly gendered. When Levy reads fiction against the social sciences she demonstrates that the history of fiction cannot be understood apart from the history of the human sciences. Both fiction and science share common narrative strategies for representing the essential female and other women: the prostitute, the primitive and the madwoman. Only fiction however represented these strategies in an idiom of everyday life that verified theory and science. Originally published in 1990, The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905.

**Sustainable Development** Michael Redclift, 2002-11-01 Argues that environmental problems need to be looked at internationally in terms of the global economic system and that the degradation of the environment is not natural but an historical process which is intrinsically linked and shaped by economic and political systems.

**Under the Banner of Science** Maureen McNeil, 1987 **Chips from a German Workshop: Essays chiefly on the science of language. With index to vols. III and IV** Friedrich Max Müller, 1884 **Essays chiefly on the science of language with index to vols 3 and 4** Friedrich Max Müller, 1876 Weaving Self-Evidence Claude Rosental, 2021-03-09

The development of theorems in logic is generally thought to be a solitary and purely cerebral activity and therefore unobservable by sociologists In Weaving Self Evidence French sociologist Claude Rosental challenges this notion by tracing the history of one well known recent example in the field of artificial intelligence a theorem on the foundations of fuzzy logic Rosental s analyses disclose the inherently social nature of the process by which propositions in logic are produced disseminated and established as truths Rosental describes the different phases of the emergence of the theorem on fuzzy logic from its earliest drafts through its publication and diffusion discussion and reformulation and eventual acceptance by the scientific community Through observations made at major universities and scholarly conferences and in electronic forums he looks at the ways students are trained in symbolic manipulations and formal languages and examines how researchers work interact and debate emerging new ideas By carefully analyzing the concrete mechanisms that lead to the collective development and corroboration of proofs Rosental shows how a logical discovery and its recognition within the scholarly community are by no means the product of any one individual working in isolation but rather a social process that can be observed and studied Weaving Self Evidence will interest students and researchers in sociology and the history and philosophy of science and technology and anyone curious about how scientists work
